REPORT

ON THE

ADMINISTRATION OF THE N.-W. P. & OUDH

FOR

1899~1900.

GENERAL SUMMARY.

ADMINISTRATION.

THE office of Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh was held throughout the year by the Hon'ble Sir Antony Patrick MacDonnell, G.C.S.I.

Administration.

Harvests of 1898-

99.

THE YEAR.

The revenue year 1898-99 was not so prosperous for the agricultural community as its predecessor: the seasons were less favourable for the crops, and the lower prices prevailing further reduced the money value of the diminished outturn. The total rainfall averaged $47\frac{1}{2}$ inches, but in the western districts the mensoon of 1898 practically ceased to give rain after the first half of September, while in some of the eastern districts unusually heavy rainfall caused considerable damage. The winter rains, although light, were beneficial. In the Meerut and Agra Divisions the outturn of the crops was generally good, but in the Benares and Gorakh-pur Divisions the autumn crops suffered from excessive rain, and the indigo crop was in consequence particularly poor. The spring harvest was in places above the average, but, on the whole, was inferior to that of the previous year. Much damage was caused by frost, especially to arhar and gram, and by field rats.

The year 1899.

The monsoon of 1899 began, as in 1898, in the middle of the second week of June, and moderate rain fell all over the provinces. During July the rainfall was excessive, except in the Meerut Division, where it was in defect, but towards the end of the month a break set in. A cyclonic storm from the Bay reached these provinces in the second week of August and gave fairly general rain. Moderate to light showers continued during the remainder of the month; but with the beginning of September rain practically ceased to fall, and by the middle of that month the monsoon currents had withdrawn from these provinces. For a time the situation gave ground for much anxiety; and the measures taken by Government to prepare for the possible approach of famine are described below. A storm in October gave light to moderate rain to the north submontane and south-eastern areas. No rain fell in November or December.

ii

Public health.

Except for a few outbreaks of cholera, there was little epidemic disease, and the public health remained fairly good.

Cattle disease.

The mortality amongst cattle was greater than in the previous year, and both foot-and-mouth disease and rinderpest were prevalent. The experiments which were made, on a limited scale, to test the value of inoculation as a preventive against rinderpest gave every promise of success. Progress is being made in spreading a knowledge of the steps that should be taken to protect cattle during epidemics, and the influence of the Veterinary staff is beginning to have some slight effect in inducing the villager to adopt the necessary measures.

Prices.

At the beginning of 1898 prices were still high, but by the end of the calendar year a very low level was reached, and the average prices for the whole year were in some districts below the average of the years immediately preceding the famine. This low range of price was maintained to the end of July 1899, when the apprehensions caused by the apparent failure of the monsoon, the certainty of severe famine in other parts of India, and the possibility of its extending to these provinces caused a rapid rise.

Trade.

There has been a steady increase in the volume of trade with the foreign countries of Tibet and Nepal, the total imports and exports being of the value of Rs. 1,26,64,278 as compared with Rs. 1,22,53,903 in the previous year, and Rs. 1,07,05,693 in 1897-98.

The Tibet trade returns showed a decline in the imports of salt, wood, horses, ponies and mules, counterbalanced by a substantial advance in those of cattle, sheep and goats, the total value of the imports being Rs. 22,615 in excess of the previous year's figures. On the other hand, exports, which in the previous year had decreased by more than half in weight and value as compared with 1897-98, showed a further decline in the year under review. A falling off occurred in the exports of grain, cotton goods and sugar, which was only partially neutralized by an increase in the exports of silver, the value of which was more than double that of the preceding year.

There was an increase of Rs. 8,03,059 in the value of the import trade with Nepal. A plentiful harvest in that country, the high prices prevailing in consequence of the prevalence of scarcity in parts of India, and the absence of trade restrictions in Nepal gave rise to large imports of grain, fibres, horses, ponies, cattle and silver coins. A very slight falling off in the export trade is attributed to a decline in the exports of cotton goods, salt and sugar.

River-borne, Railborne and Road Traffic. The registration of the river-borne traffic between the North-Western Provinces and Bengal began in June 1898. The figures for that year were therefore incomplete, but the average monthly imports and exports show an increase of 20,554 and 1,917 maunds, respectively, during the year 1899-1900.

The total amount of rail-borne traffic in 1899-1900 showed a pronounced rise both in volume and actual value, the percentages of increase being 22 and 18 respectively. The import trade shows an advance in weight of 17 per cent. and the export trade of over 105 lakhs of maunds

or 26 per cent. on the figures of the preceding year; the cash value of both imports and exports being 18 per cent. in excess of the returns for 1898-99.

The imports of coal, which were exceptionally heavy in the previous year, slightly declined.

The imports of raw cotton and cotton goods fell considerably, and those of salt showed a decline of over $4\frac{1}{2}$ lakes of rupees in value.

The most marked increases occurred under the heads of grains, stone and lime, and railway stock; the two latter being due to the construction of the Gháziabad-Moradabad and Hardwár-Dehra Dún Railways. The famine in Bombay and Rájputána led to an extraordinary increase in the trade in hides and skins, which were collected from the famine districts in Cawnpore and despatched from there in great quantities to Calcutta for shipment to Europe. There was a very large increase in the amount and value of grains exported, in consequence of the famine prevailing in Bombay, Rájputána and the Central Provinces.

The most important decrease was in both the import and export of sugar, the decline in the trade being attributed to the poor yield of the sugarcane crop and the diminished demand in the famine-afflicted provinces.

The North-Western Provinces and Oudh fortunately escaped the severe famine which afflicted other parts of India. As early as August 1899, however, the threatened failure of the monsoon gave rise to anxiety, and inquiries were made as to the possible necessity for relief measures. In one important respect, the provinces were better equipped than in 1896 to face the period of trial, as the supplies of grain in stock were unusually large. There had been, on the whole, since the last famine a succession of fair harvests, and the fall of prices had led to the hoarding of grain in unusually large quantities, not only in the warehouses of traders, but in the granaries of the agriculturists themselves, who were waiting for a better market. This tendency to hoard is believed to have been encouraged in some places by widespread predictions that the year was destined to be a calamitous one. A good fall of rain in the middle of September relieved the anxiety felt as to the condition of the greater part of the provinces. But this rain unfortunately was insufficient in many of the western districts, while in Agra and Muttra there was practically none at all. Special measures had to be taken to maintain the supply of water in the canals, which threatened to run short, and provision was made to allow of the prompt undertaking of relief works in the tracts where scarcity was most to be apprehended.

A further source of anxiety began to show itself at this time in the influx of numerous bands of agriculturists and others from the Native States of Rájputána and elsewhere, who crossed the border in the hope of finding work, or charity, or pasturage for their cattle. These immigrants were, for the most part, found to be quiet and well-conducted, and their influx gave little trouble.

In the end of October and beginning of November the Lieutenant-Governor visited the localities in which there was most reason to

Scarcity operations in 1899.

apprehend famine, and made inquiries from the local officers and the principal landlords as to the prospects of the coming season. There had been some further falls of rain in a few districts by that time; but though none had fallen in the worst tracts, it was found that prospects were less serious, on the whole, than had originally been apprehended. Test works in Agra and Muttra had failed to draw labourers: the demand for ordinary labour was unusually large and the wages offered exceptionally high. The stocks of grain were still plentiful, notwithstanding the enormous export trade, with which the railways had been unable adequately to cope; and, except in a few tracts, it appeared that no severe distress was to be apprehended for some months, and that, with good winter rains, the provinces might tide over their difficulties altogether.

A watchful policy was adopted and preparations were made in all threatened tracts for the speedy organization of relief measures. But though the winter rains were delayed to the second half of January, no necessity for resort on a large scale to Government measures of relief was found necessary.

In one part alone did the scarcity drive people to relief works, namely, in the southern part of the Jhánsi district in Bundelkhand, where the country had not yet recovered from the effects of the last famine. Test works had been opened in this tract, and though they did not at first attract labourers very rapidly, it became necessary to open regular relief works in December 1899. The number of labourers on these works was not, however, very great: the largest number employed in one day during the year ending the 31st March 1900 was 3,700.

In no other part of the provinces was it found necessary to open relief works, and such distress as existed was sufficiently met by the suspension or remission of revenue, and by special measures for the relief of the destitute in large cities, the cost of which fell for the most part on municipal funds or on private liberality.

In the month of March a meeting was held under the Lieutenant-Governor's patronage at Lucknow to collect subscriptions for the Indian Famine Charitable Relief Fund. Similar meetings were held in all districts. A Provincial Branch of the Relief Committee was organized, and eventually subscriptions to the extent of Rs. 3,82,166 were collected in these provinces. These were all sent to the Central Fund, from which a sum of Rs. 25,000 was subsequently received for the succour of the distressed population in the famine tract in Bundelkhand. In that tract the relief works were kept open till after the close of the year under report.

The total expenditure falling on the Government up to 31st March 1900 was Rs. 67,000 only, and of this the greater part went on preparations and precautionary measures.

The revenue collections up to 31st March were below the original estimates by about 20 lakhs of rupees; and while the greater part of this will be eventually recovered, some portions of it will be necessarily remitted.

٧

It was necessary to make advances freely to agriculturists; over 7 lakes of rupees being devoted to this purpose as compared with the normal allotment of Rs. 4,60,000.

LEGISLATION AND THE LEGISLATIVE AUTHORITY.

The Legislative Council met five times during the year.

Legislative Council.

Five Bills were dealt with, of which two were passed into law, Legislation.

- (1) the North-Western Provinces and Oudh Court of Wards Bill; and
- (2) the North-Western Provinces and Oudh Municipalities Bill; and the other three, viz.—
- (3) the Oudh Settled Estates Bill;
- (4) the North-Western Provinces and Oudh Land Revenue Bill;
- (5) the Oudh Rent Act, 1886, Amendment Bill were under the consideration of Select Committees at the close of the year.

NATIVE STATES AND POLITICAL.

The Annual Report on the administration of the Rámpur State is separately published. The income of the year was Rs. 30,51,807 and the expenditure Rs. 31,90,556, as compared with Rs. 32,21,124 and Rs. 31,79,035, respectively, in the preceding year. A lakh of rupees was withdrawn from the Reserve Treasury during the year, as against nine lakhs in the previous year and at the end of the year there was an actual balance of Rs. 2,15,795-8-10 in the Current Treasury and 920 gold mohars.

Rampur.

The Annual Report on the administration of the Tehri State is also separately published. The administration of the State continued to be satisfactory. The receipts of the year, including the opening balance of Rs. 8,33,495, amounted to Rs. 10,84,083 and the expenditure to Rs. 4,27,170, leaving a closing balance of Rs. 6,56,913, the financial position of the State thus continuing to be a satisfactory one.

Tehri.

FINANCE.

The general financial arrangements made for the year, which was the second of the temporary two-year contract, differed in no essential respect from those adopted in 1898-99.

The working of the year resulted in a considerable decline under Provincial receipts as compared with the actuals of the preceding year, but these receipts were in close agreement finally with the total budget figure. The Provincial expenditure, on the other hand, while much in excess of that of 1898-99, was in a still greater degree below the amount provided in the budget. The receipts classed under Local compare unfavourably both with the actuals of the previous year and the budget

estimate; the expenditure, however, although in excess of the charges of 1898-99, resulted in large savings on the budget provision.

In the following table, which includes Debt accounts, the general financial transactions of the year are contrasted with those of 1898-99:—

			1898 99.			1899-1900.			
		Provincial.	Local.	Total.	Provincial.	Local.	Total.		
Opening balance Receipts	,	Rs. 3,84,89,816	Rs. 8,11,126 1,23,42,599	Rs. 8,11,126 5,08,32,415	Rs. 32,85,628 3,70,16,666	Rs. 14,23,089 1,21,93,173	. Rs. 47,08,712 4,92,09,839		
Total	,,,	3,84,89,816	1,31,53,725	5,16,43,541	4,03,02,289	1,36,16,262	5,39,18,551		
Expenditure		3,52,04,103	1,17,30,636	4,69,34,829	3,62,62,847	1,20,86,724	4,89,49,571		
Closing balance		32,85,623	14,23,089	47,08,712	40,39,442	15,29,538	65,68,980		

The Provincial receipts were thus 14,73, below, and the charges 10,59, in excess of those of the previous year.

In the original budget the accrual of a deficit of 7,55, was assumed on the transactions of the year. The accounts, however, show a surplus of 7,98, with the result that the actuals are 15,08, better than the original estimate. This is due to savings aggregating 15,27, in the amount provided for expenditure, counterbalanced by a decrease of 19, in the amount provided for receipts. The estimate and actuals of the latter included a sum of 3,98, transferred from Imperial to Provincial Funds, of which 3,83, represents the adjustment allowed under the current Provincial settlement upon Land Revenue collections, and the balance, two contributions of practically equal amount,—one in connection with the issue of rum in bond to Bengal and the Central Provinces, and the other to meet half the cost of the construction of an office building for the Conservator of Forests, Central Circle.

The Provincial Revenues were further augmented by contributions for untransferred services amounting to 5,40, from surplus District Boards, in pursuance of arrangements entered into with those bodies on the introduction of the present system of Local Finance. On the other hand, transfers aggregating 21,20, were made from the Provincial account to the credit of Local Funds, viz.,—10,00, the statutory contribution to the Patwári Fund; 1,22, to cover a deficit of that amount in the Local Rate Fund; 3,56, transferred to the credit of District Boards on account of the surplus of the Ferry Fund, in pursuance of the further decentralisation of Local Finance; and 5,99, extra assistance given to certain District Boards whose balances showed danger of becoming unduly deplenished.

Although the total actual and estimated receipts show a comparatively close approximation, this result was not attained without important divergences as regards individual heads. Large increases—aggregating 7,10,—occurred under Irrigation Major Works, Excise, Interest on Ordinary Debt, Stamps and Irrigation Minor Works; while the receipts

under Land Revenue and Miscellaneous fell below the estimate by a total amount of 5,56. These variations may generally be attributed to the further development of causes that had been taken into consideration when the budget was originally framed. As regards the head Stamps, however, the increase (42) did not occur until the last month of the year, and appears to have been connected, in some measure, with the stimulus given to rent litigation by anticipated changes in the tenancy law.

The largest saving in the allotment for Provincial expenditure occurred under Civil Works, and mainly represented the unutilised portion of the provision of 10 lakhs entered under the head to balance the special contribution of that amount made by the Imperial to the Provincial Government in the accounts of the previous year. Other large savings accrued under the heads—Jails, Police, Land Revenue, Courts of Law, Education, Forest, Interest on Ordinary Debt, Stamps, Assignments and Compensations, General Administration. The budget estimate, on the other hand, was exceeded under the heads—Miscellaneous, Irrigation Major Works, and Stationery and Printing.

Part of the savings under Jails was due to the curtailment of purchases of raw materials for the jail factories, the income from which substantially decreased with a slackened demand for their products, for which plague and the consequent embarrassment of trade were accountable. Of the remaining heads, it will be sufficient to explain that the decrease under Courts of Law was chiefly due to the number of officers on furlough, and that under Police to similar absences and to the fact that the reorganization scheme, for which full provision had been made in the budget, could not be completed, although steady progress was made in working up to it.

Under Local, the receipts and charges were taken in the original-budget at 1,25,95, and 1,26,40, respectively, a deficit of 45, being thus anticipated. While, however, the income suffered from the depression of the Provincial Rates receipts, the Boards worked their funds with caution; and, though able to spend more freely than in the previous year, effected large savings in their allotments,—mainly in Public Works and, to a smaller extent, in their Medical and Educational expenditure; and in the result the year's working converted the budgeted deficit into a surplus of 61, and left the Boards with a total net balance of 14,84, at its close, as compared with 14,23, at credit when the year opened.

PUBLIC WORKS.

(1) Buildings and Roads.

The administrative changes during the year were the formation of a new sub-division in the 1st Circle of Superintendence, called the Agra-Delhi Chord Railway (Famine) Sub-division, with its headquarters at Muttra, on the 1st November 1899, and the abolition of the same on the 28th February 1900. A Special Sub-division was also constituted in the 2nd Circle of Superintendence on the 16th October 1899, in connection with the construction of the bridge over the river Gumti at Lucknow—a work of some difficulty, for which it was thought expedient to place an Engineer Officer in exclusive charge.

Administrative changes.

Total outlay.

Including outlay on contribution works, the total expenditure incurred in the Buildings and Roads Branch during the year 1899-1900 was Rs. 60,14,238, or Rs. 9,49,888 more than the expenditure during 1898-99. The total of the establishment charges for the year 1899-1900 was Rs. 10,88,431. This amount, which includes Rs. 37,774 for the Roorkee Workshops, is more by Rs. 590 than the corresponding total for the year 1898-99.

Detail of outlay.

Distributed by service heads, the expenditure was as under:-

				•	${ m Rs.}$
Imperial	•••	•••	•••		3,09,143
Provincial	144	***	***		37,10,901
Local	***	•••	***		18,48,726

			Total		1,22,56,271	1,16,66,353	50,64,350	60,14,238

The expenditure of Rs. 81,928 incurred on contribution works during the year includes a sum of Rs. 79,578, on which no percentage on account of establishment was charged.

FAMINE RELIEF WORKS.

Principal operations.

Although in these provinces there was no actual famine during the year under review, the climatic conditions at the end of the rains were so threatening that it was necessary to take very extensive precautions both in the Agra and Muttra districts (1st Circle) and in the Jhánsi district (3rd Circle), and preparations for famine works on a large scale were made.

In the 1st Circle five test works were started, two in the Agra district and three in Muttra. These were opened in October and closed in November, as there appeared to be no demand for labour. In addition a special Sub-division, called the Agra-Delhi Chord Railway (famine) Sub-division (as already noticed) was formed, and the alignment of the railway through the Agra and Muttra districts rapidly lined out to admit of famine labour being utilized in throwing up the embankment. The full equipment necessary for four charges was got together and held in readiness, but no work was actually started on the embank-The Sub-division was closed in February. In the Jhansi district four relief charges were opened and were working at the close of the year, arrangements for opening works were also made in the Banda and Allahabad districts and in the Rohilkhand Division, but these were not eventually found necessary. The total expenditure incurred on the above works up to the 31st March 1900, including Establishment and Tools and Plant was Rs. 64,322. This sum was expended as follows: Rs. 25,668 on the equipment of the four railway charges in Agra and Muttra, and Rs. 36,448 on special repairs to roads and deepening tanks in the Jhansi district, including the expenditure on equipping the four charges, Rs. 640 were expended in the equipment of a charge in the Allahabad district and Rs. 1,566 in the equipment of charges in the Rohilkhand Division. The establishment kept up was sufficient for the control of nine charges employing 45,000 persons per diem of famine labour, as for a long time it was uncertain what number of the population would be compelled to seek relief on the works. As the number who attended the works never exceeded 3,700 in one day, the cost of the work was higher than it would have been had severe famine actually developed.

Conservation works on buildings of archaelogical and historical interest.—Special attention has been devoted to conservation work during the year, and a sum of Rs. 92,059 expended. A full report on these works will be found under the head "Minor Department, Archaelogy."

The operations during the year are summarized as follows:-

First Circle.—Among the ordinary works undertaken or completed during the year, the following, of which a detailed description will be found in Part II Chapter IV, are the most important:—

- (i) Additions and alterations to the kachahri buildings at Mussoorie.
- (ii) Constructing Settlement Survey Office at Pilibhít.
- (iii) Construction of a Government Circuit-house at Mcerut.
- (iv) Constructing a Government Circuit-house at Agra-
- (v) Constructing new technical workshops for the Thomason Civil Engineering College at Roorkee.
- (vi) Providing additional accommodation in the reserve police lines at Aligarh.
- (vii) Additions and alterations to the Lunatic Asylum at Agra.

- (viii) Raising, bridging and metalling the Dehra and Fatchpur road in the Dehra district.
- (ix) Protective works to the Khandour nadi bridge in the Saháranpur district.
- (x) Improving the Mussoorie and Rájpar bridle-road in the Dehra district.
- (xi) Constructing a female hospital at Etáwah.
- (xii) Constructing a boarding-house and subsidiary buildings for the Anglo-Vernacular Middle Class School at Hathras in the Aligarh district.
- (xiii) Raising, bridging and metalling the Budaun and Kadirchauk road in the Budaun district.
- (xiv) Raising, bridging and metalling the Gunnaur and Babrala road in the Budaun district.
- (xv) Raising and metalling a portion of Nanu, Dadon and Sankra road in the Aligarh district.
- (xvi) Constructing an iron girder bridge across the Paharwa nálá on the Zarinpur, Mirzapur and Kalan read in the Sháhjahánpur district.

Second Circle.—The following main lines of communication were transferred from Local to Provincial from 1st April 1899:—

		Miles.
(1) Káthgodám and Almora road in the Naini Tál district		31
(2) Naini Tál to Rámgarh	•••	
(3) Bhowali to Bhimtal	•••	10
•••		4
(4) Káthgodám and Almora in the Almora district		5∔
		0.7

A vigilant watch was kept on the unstable hills in the vicinity of the Brewery, and it was not found necessary during any period of the monsoon to close to traffic the principal entrance to Naini Tal.

In the year under review orders were issued for the demolition of the old Government House, Naini Tál. The history of the abandonment of the old Government House need not be recounted here; but in 1895 it was reported by a Committee of Engineers to be positively dangerous owing to cracks in the building due to a sliding movement in the rock on which the house was founded. The building was vacated in March 1896, and the intention was that it should be sold and the proceeds credited to the estimate for the new Government House. No purchaser, however, came forward under the conditions insisted on, that the house should be dismantled, and as the expense of keeping the place watertight and otherwise in repair was considerable, with no corresponding advantage, orders were issued by the Licutenant-Governor to re-examine the building and site and report as to its fitness or otherwise for occupation.

The building was inspected on the 19th October 1899 by a Committee of Engineers of this Department, viz.—

- Mr. G. K. Watts, Superintending Engineer, 2nd Circle.
- Mr. W. G. Wood, Executive Engineer, Under Secretary, Public Works Department.
- Mr. H. S. Wildeblood, Executive Engineer, Ayarpatta Division.
- Mr. A. C. Polwhele, Executive Engineer, Kumaun Division.

The report showed that from the record of the measurements previously taken the cracks indicated a steady increase, and that without the hill entirely giving way, the continually-increasing size of the cracks must destroy the cohesion of the building and render its collapse a mere matter of time. It was accordingly declared that the building was absolutely unfit for habitation and its immediate demolition was recommended.

The Lieutenant-Governor acquiesced in this report, and ordered the demolition of the main building, which was completed by the 31st March 1900.

The following are some of the more important works undertaken or continued in this circle during the year under review:—

- (i) Construction of the new Government House, Naini Tál.
- (ii) Reconstruction of the Imperial Bacteriological Laboratory (main building), Naini Tál.
- (iii) Construction of a new Forest Office at Naini Tál.
- (iv) Construction of a steel girder bridge of 95 feet spans in mile 8 of the Rámnagar and Ránikhet cart-road in the Naini Tál district.
- (v) Construction of a new road from Bhimtal to Ránibágh, Naini Tál district.
- (vi) Constructing a portion of the Kotdwára and Lansdowne cartroad between the Kotdwára Railway Station and Bridge over the Koh river in the Garhwál district.
- (vii) Construction of a steel girder bridge over the Koh river in the Garhwall district.
- (viii) Re-building the bridge over the Bora river at Kaladhúngi in the Naini Tál district.
 - (ix) Realignment of the road across the Nirpani cliff in the Almora district.
 - (x) Realignment of a portion of the pilgrim route between Karanpryag and Rudrapryag in the Garhwal district.
 - (xi) Additions and alterations to the building occupied by the offices of the Director of Land Records and Agriculture,
 Judge of Small Cause Court and Registrar of Lucknow.
- (xii) Construction of the Judicial Commissioner's Courts at Lucknow.
- (xiii) Construction of an iron girder bridge over the river Gumti near Sikandarbágh, Lucknow.

Third Circle.—The following are some of the important works undertaken or completed in this circle during the year under review, a brief description of which will be found in the report:—

- (i) Construction of a new Post Office at Cawnpore.
- (ii) Fire protection for the four blocks of Public Offices at Allahabad.
- (iii) Constructing a Training College at Allahabad for the Educational Department of the North-Western Provinces and Oudh.
- (iv) Constructing chemical laboratories for the Muir Central College at Allahabad.
- (v) Constructing Physical Science class-rooms for the Muir Central College at Allahabad.
- (vi) Constructing a first class road from Ráth to Kulpahár Railway.

 Station in the Hamírpur district.
- (vii) Converting Mau-Punch 2nd class road into 1st class in the Jhánsi district.
- (viii) Raising and bridging the Naraini-Kartal road in the Banda district.
- (ix) Constructing an iron girder bridge over the Chira nala on the Jalaun-Madhogarh road in the Jalaun district.
- (x) Constructing a new Collector's kachahri and subsidiary buildings at Ballia,
- (xi) Constructing a new Treasury at Ballia.
- (xii) Constructing a new tahsíli at Ballia.
- (xiii) Constructing a new munsifi at Ballia.
- (xiv) Raising and bridging the Alinagar-Baburi road in the Benares district.
- (xv) Metalling the Deoria and Barhaj road in the Gorakhpur district.
- (xvi) Metalling the Nangarh and Birdpur road in the Basti district.
- (xvii) Metalling Basti and Bansi road in the Basti district. .
- (xviii) Constructing a new 2nd class road from Ganeshpur to Senduriaghát and Mahárájganj in the Gorakhpur district.
 - (xix) Raising and bridging road from Bitharia to Chunderdipghát in the Basti district.
 - (xx) Raising and bridging road from Domariagunj to Bitharia in the Basti district.
- (xxi) Raising and bridging road from Khalilabad to Chhibraghát in the Basti district.

2.—Canals.

The total capital expenditure, direct and indirect, during the year amounts to Rs. 12,91,637 or Rs. 1,29,553 more than the previous year. Most of this was on the Lower Ganges Canal; the completion of the Narora Weir Works took nearly 3 lakbs for works only, and nearly the same amount was expended on the new Fatehpur Branch. The remainder was principally to improvements, and to new distributaries and minors to secure a more economical distribution of water.

Capital Expenditure.

The more important of the new works completed or under construction during the year were:—

New Works.

On the Betwa Canal, the erection of drop shutters for the Paricha Weir

On the Upper Ganges Canal. the completion of the Belwalla Training Works and several distributary and drainage works.

On the Lower Ganges Canal, the construction of the Fatchpur Branch, and the Ghatampur extension, strengthening of the Narora Weir, widening of the Cawnpore Branch and construction of the Stillwater Navigation Tail Works, with Docks at Cawnpore; and the completion of Ubhti Regulator and Bahera Distributary.

On the Agra Canal, the Asaota Drain.

On the Eastern Jumna Canal, improvements to distributaries and drains and the construction of new minors

On the Dún Canals, several works on the Song Channel.

On the Rohilkhand Canals, the Kicha River Training Works and the Saidpur and Left Choreli Canal Remodellings.

The completion of the Nehtor Canals and the construction of minors on the Bijnor Canals.

The Fatchpur Branch was formed into a complete working Revenue Division with three Sub-Divisions on 1st April 1899.

There was an expenditure of Rs. 21,799 from Provincial revenues on the construction and improvements of drains in canal-irrigated tracts, and Rs. 19,397 on the maintenance and repairs of similar works.

Agricultural Works.

Taking all kinds of channel together, a total length of 279 miles of new channels were opened this year, the larger proportion of which was contributed by the Fatehpur Branch. The total mileage of all kinds of channels now open amounts to 12,531 miles.

Mileage of Channels.

The total area irrigated by all canals including those of the Tarai and Bhabar Canals in Kumaun amounted to 2,974,047 acres. This is more than eight and one-third lakks of acres above the average of the previous 10 years, representing an excess of about 40 per cent. This area has only been exceeded during the famine season of 1896-97.

Area irrigated.

The area under sugarcane amounted to 287,406 acres, the highest yet recorded. Several other crops have also attained the highest figures yet reached, notably wheat, cotton, maize and poppy.

Revenue assessed.

The assessments of the year, direct and indirect, amount to Rs. 1,03,89,012. This sum is $34\frac{1}{2}$ per cent. above the average for the previous 10 years, and has only once been exceeded.

xiv

Gross revenue realised. The gross revenue realised amounted to Rs. 96,61,971; a sum which is $28\frac{1}{2}$ per cent. above the average of the previous 10 years; and has only been once exceeded.

Working expenses. The total charges against revenue amounted to Rs. 31,94,912. This sum is Rs. 47,602 more than the previous year's charges, as against an increase of Rs. 6,40,000 in the gross revenue.

Net revenue.

The net revenue from canals of all classes amounts to Rs. 64,67,059. This is $38\frac{1}{2}$ per cent. above the average of the previous 10 years, and it yields a return of 7.15 per cent. on the total capital outlay on all works.

The Betwa Canal, constructed as a protective work, continues to work at a loss. The loss this year amounted to Rs. 8,847 as compared with an average loss of Rs. 24,200 in the previous 10 years.

Minor works yield a net revenue of Rs. 84,697.

The four large canals classed as productive, show a net revenue of Rs. 63,91,209. This sum represents a return of 7.7 per cent. on the whole of the Capital invested in Productive Works.

LAND REVENUE AND AGRICULTURE.

Outstanding arrears.

The revenue report deals with the year ending 30th September 1899.

Further substantial progress was made in clearing off the arrears of land revenue left over from the famine period, though it has not been found possible to collect the balances in the time originally anticipated. These arrears stood at the beginning of the year at 86 lakhs of rupees, of which 49 lakhs have been recovered and 8 lakhs remitted, the balance of old arrears outstanding being reduced by the close of the year to 29 lakhs.

Current revenue.

The total amount of land revenue due to Government on account of the year was $619\frac{1}{2}$ lakhs of rupees, of which 606 lakhs were collected, and over 13 lakhs left outstanding. The increase of 5 lakhs in the demand as compared with the figures of the previous year was due to enhancements resulting from revisions of settlement. Owing to the favourable rainfall there was a further decline in the demand for canal water, and the receipts from occupier's rates, which were practically collected in full, fell from 72 to 67 lakhs.

Revenue Money Orders. The use of the system under which revenue and other dues are remitted by money order continued to spread: but there can be little doubt that the system has the effect of weakening the position of the lambardárs, who have already in many places ceased to be an active agency for the representation of their co-sharers. It will be necessary to consider, when the legislation for strengthening their position proposed in the Land Revenue Bill comes into force, whether any check on the practice of receiving revenue direct from co-sharers is necessary.

Rent litigation, North-Western Provinces. Although there was an increase of 6.29 per cent. in the number of suits instituted, the number of applications fell off by 11.5 per cent., and the combined total of suits and applications showed a decrease of nearly 4 per cent. as compared with the preceding year. Suits for arrears of

rent comprised more than 91 per cent. of the total litigation. The decrease in the number of applications was almost entirely due to the diminished number of applications connected with the ejectment of tenants-at-will. It is probable that the criticism to which the free exercise of this power was subjected in the discussion on the revised Rent Bill was partly responsible for this decrease.

In Oudh, suits in Rent Courts increased by nearly 5 per cent., the increase being entirely due to the rise in the number of suits for arrears of rent, attributable to a desire to prevent the arrears of 1895-96 from becoming barred by limitation, and to a reluctance on the part of tenants to sell their produce during the time when low prices prevailed. Illegal enhancements of rents were more numerous, and in one estate in which these were extensively made, enquiry was ordered by the Government and the rents reduced.

Rent litigation, 0udh.

There was a large increase in the number of processes other than writs of demand, indicating greater difficulty in collecting the revenue. The most noticeable increases were in the attachments of moveable property in which sale had actually to be enforced, and in annulments of settlement followed by direct management.

Coercive processes.

Owing to the favourable character of the season during the greater part of the year, there was comparatively little demand or necessity for agricultural advances. The total amount advanced under the two Acts fell from Rs. 4,26,238 to Rs. 2,13,740. Some progress was effected in realising debts outstanding on account of advances taken in the famine years, and the balances have been reduced from Rs. 26,19,356 at the end of the previous year to Rs. 17,53,903 at the close of the year under review.

Advances under the Land Improvement and Agriculturists' Loans Acts.

Settlement operations are approaching completion in four districts, and in two the work of assessment has begun. The assessments made in all districts are subjected to careful scrutiny by the Board of Revenue and the Government, with a view to preventing the imposition of demands which would press too heavily on the landowning classes, while at the same time securing for the Government the increased revenue which the progress of the country and the change in the value of money entitles it to receive.

Settlement operations.

There were 417 State properties in the provinces, or 14 more than in the previous year. The increase in the total rental demand from Rs. 8,11,575 to Rs. 8,39,191 is more than accounted for by the improvement in the rentroll of the Tarái Government estates. Including arrears, the total demand was Rs. 9,32,101, of which Rs. 8,22,135, or 88 per cent. was collected. After defraying charges on account of revenue and rates and cost of management and improvements, the net profits to Government from these estates amounted to over $2\frac{1}{2}$ lakks of rupees.

State properties.

There were 190 estates under the management of the Court of Wards at the close of the year, as compared with 194 at the end of the previous year. Twelve estates were released during the course of the year, the largest of these being the Bhur estate in Kheri with a rentroll of over 14 lakhs. Next in importance were the Haldaur estate

Court of Wards.

in Bijnor and the Hari Singh estate in Bareilly. All the larger estates were handed over to their proprietors free of incumbrances and with resources largely developed.

The largest estate which came under the management of the Court during the year was Káshipur in the Naini Tál district, the management of which was undertaken on behalf of the two minor sons of the late Rája Hari Ráj Singh. The estate is encumbered with debts amounting to over two lakhs of rupees.

The total area of the estates under management was 3,201,864 acres, and the gross rental demand of all estates, current and arrears, amounted to 913 lakhs, of which over 78 per cent. was collected. The incidence of the cost of management on the income was 7 per cent., or 1 per cent. higher than in the previous year. The education of wards has been carefully attended to, while in their estates appreciable progress is now being made in furthering primary education. Less has, however, been done than usual in promoting agricultural improvement on the estates; and the expenditure on such improvements fell off in the North-Western Provinces by over 42 per cent. In Oudh, where larger estates are under management, the expenditure was slightly in excess of that of the previous year and amounted to nearly a lakh and a The construction and repair of wells were the principal forms of improvement undertaken. Sanitary measures and vaccination received considerable attention during the year. Owing to the favourable harvests in the autumn of 1898 and spring of 1899 there was a further falling off from Rs. 86,288 to Rs. 57,548 in the amount of advances made to tenants for the purchase of seed and plough cattle. A sum of 41 lakhs was paid in liquidation of debts, and over 11 lakhs were invested on behalf of solvent estates in landed property and in loans to embarrassed estates under the management of the Court.

The new Court of Wards Act which has lately become law will, it is anticipated, tend greatly to the efficient and successful working of this important department of the Administration.

Working of the Department of Land Records and Agriculture. In three districts survey operations and revision of records were completed by the permanent agency of the Land Records Dopartment. Survey operations and proceedings for the revision of the land records were carried on in seven districts during the year. Altogether an area of 3,312 square miles was surveyed, and training in survey work was given to 1,720 patwaris, 59 kanungos and 263 apprentice kanungos. The general character of patwaris or village accountants' work as surveyors is reported to have been very satisfactory. The village accountants are supervised by kanungos, for whose training no special arrangements were made till within the last few years when an Agricultural School was established at Cawnpore. It has not, however, as yet been compulsory on candidates for kanungoships to pass through this school, and many of them are insufficiently trained and educated. The question of making the school certificate an essential qualification for the office has been taken into consideration.

d testing

A marked improvement has been obtained in the punctuality with which the annual village papers are filed. The amount of field testing

by kanungos has been on the whole sufficient, and a general improvement has been effected both in the checking of rentrolls and in the re-testing by superior officers. The pargana-books, in which the principal figures relating to the agricultural and economic history of each village are abstracted, have in some districts been intelligently utilized, but elsewhere proper attention has not been given to the checking and maintenance of these registers.

The experiments conducted at the Cawnpore Farm, with the object of ascertaining the values of different manures as applied to various crops, the effects of deep and shallow ploughing, and the possibility of introducing certain foreign staples, have now been thoroughly systematized, and a working-plan will shortly be published. Special attention has for the last three years been devoted by the Agricultural Department to the distribution of good seed.

Reclamation of

usar land.

Cawnpore Experimental Farm.

Experiments in the reclamation of usar land were continued in the three Government reserves—Juhi, near Cawnpore; Gursikran, near Aligarh; and Abbaspur, near Unao. In the first two reserves, the effects of enclosure, embankment, retention of rain water, and restriction of grazing are seen in the improvement of the natural vegetation; and experiments demonstrate that ordinary grain and fodder crops can be produced on land which, after being thoroughly broken up and pulverized by tillage, has been manured and irrigated. The growth of grass was somewhat poor owing to the partial failure of the rains. The experiment of planting trees in usar land after boring through the underlying bed of kankar, so as to allow the roots of the trees to pass through it, has so far succeeded.

The acacia plantations which were started in the Abbaspur reserve, with the object of determining whether the demand for tanning materials would enable such plantations on a large scale to work at a profit, are doing well. With the help of a special grant of Rs. 3,000 made by the Government of India, it was found possible to carry out extensive planting operations.

Good work continued to be done in the Botanical Gardens at Lucknow and Saháranpur, though as the season was unfavourable for planting, there was a falling off in the demand for most classes of plants, and the fruit crop was only moderately good. Attention is being paid in both gardens to the cultivation of fibre plants, for which enquiries are not infrequent, and experiments, interesting though on a small scale, have been made at Saháranpur in growing the sugar beet, and extracting sugar from it.

Saharanpur and Lucknow Gardens.

Trees were planted during the year on 212 miles of road as compared with 269 miles in the previous year; and the total length of avenues at the close of the year was 8,779 miles. The unfavourable character of the season prevented much progress in the extension of the system of tree-planting along roads by private persons.

Arboriculture.

The financial results of the year were somewhat less satisfactory than in the previous year, the receipts being practically the same while the expenditure rose from Rs. 81,346 to Rs. 89,914.

Civil Veterinary Department. There was no appreciable increase in the number of stallions maintained by the Imperial Veterinary Department; but there was a greater demand for their services, and the results were also somewhat more successful. There has been a more pronounced increase in the demand for the services of donkey stallions.

The value of Arab stallions in improving the ordinary country-bred stock is beginning to be recognised by zamíndárs and horse owners.

The Provincial Branch of the Department, which had long been hampered by want of funds, was able to make a substantial addition, by purchase of 17 stallions to its stock. The number of animals on the register thus rose from 61 to 72, while the number maintained by Court of Wards' estates and private owners was twelve. There was a slight increase in the demand for the services of Provincial stallions; but the results were less successful than in the preceding year.

No actual advance has been made in the promotion of mule-breeding but good results are expected from a scheme for utilizing cast mares for this purpose, which has just been introduced.

Cattle disease was very prevalent during the year. Complete statistics as to the damage caused are not available, but the total deaths are estimated at half a lakh. Rinderpest was particularly destructive, the number of deaths reported from this cause having risen from 16,752 to 35,361.

The improvement of the subordinate veterinary staff was under consideration during the year, and a representation was also made to the Government of India, regarding the strengthening of the superior staff by the addition of a European officer, as sufficient attention could not with the existing staff be devoted to cattle-breeding and the investigation of cattle disease.

The number of Veterinary assistants employed rose from 27 to 33, and a Veterinary dispensary was opened during the year in the Muzaffarnagar district.

Emigration.

Eleven thousand seven hundred and seventy-five emigrants were registered for the Colonies as compared with 8,131 in the previous year, an increase of 44 per cent. The principal recruiting localities were Cawnpore, Fyzabad, Allahabad and Basti.

A classification of the number of persons registered during the year showed that nearly 47 per cent. belonged to the North-Western Provinces and 36 per cent. to Oudh. The number of emigrants who actually proceeded to the Colonies was 7,925 as compared with 5,523 in the preceding year. Nearly half of these emigrants went to Demerara, the only other Colonies which received over a thousand being Trinidad and Natal.

In the preceding year Inland Emigration was confined to a single district (Azamgarh) and 35 emigrants were recruited. During the year under report Gházipur was the only district in which emigrants were recruited, the number registered being 31. Free emigration to the labour districts was not resorted to en so large a scale as in the previous year, a result probably due to larger recruitment in the Central Provinces, where the supply of labourers was plentiful.

SEPARATE REVENUE.

The real receipts, viz., Rs. 59,73,691, were the highest hitherto recorded in the provinces, having increased by 23.34 per cent. over the receipts, Rs. 48,43,308, of the previous year.

Excise.

The increased receipts were distributed among all the main heads of revenue. The rise was especially notable in Oudh.

The following table shows the increase in receipts from country liquor under the chief sub-heads, as compared with the previous year:—

Country liquor receipts.

	_					,

			Total	•••	27,91,607	36,63,639	8,72,032

Receipts from license fees were Rs. 13,88,006 as against Rs. 10,67,265 in the previous year. The figures for still-head duty were Rs. 22,75,633 and Rs. 17,24,342 respectively. The rise in license fees was common to every district except three. The increase in still-head duty (32.0 per cent.) was proportionately greater than in vend fees (29.7 per cent.).

The total receipts rose from Rs 8,12,924 to Rs. 9,95,940. Licensees fees for vend produced Rs. 6,76,849 as against Rs. 5,50,727, while the revenue on account of fixed duty rose from Rs. 2,62,197 to Rs. 3,19,091. The import of charas and bhang was considerably in excess of the recorded figures of previous years, the continued difficulty in obtaining a sufficient supply of ganja from Bengal, and the prohibitive prices of the Bengal drug were again responsible for the continuously low import of ganja. The working of the warehouse system was again satisfactory.

The receipts from license fees for the vend of opium were Rs. 1,42,567 against Rs. 1,37,472 in the previous year. The competition of the official vendors and the steady increase of poppy cultivation must be ascribed as the reason of the stationary character of these receipts.

The amount of excise opium sold rose to 60,650 sers, as compared with 56,642 sers in the previous year; but these figures were still considerably short of the pre-famine statistics of consumption.

The gross receipts rose from Rs. 73,35,560 to Rs. 74,70,851, these figures being the highest on record for these provinces. Of the total increase of Rs. 1,35,291, Rs. 34,525 accrued from non-judicial stamps, Rs. 94,605 from Court-fee stamps, and Rs. 6,161 from Copy stamps The falling off in the receipts from non-judicial stamps which began in 1894-95 was arrested, the increase of the year being common to all heads of non-judicial stamps. The increase in the receipts from

Hemp drugs.

Opium.

Stamps.

Court-fee stamps was shared by both provinces: these receipts were again the highest on record.

The general rise of revenue was due, as regards non-judicial stamps, to the revival of commercial activity; as regards Court-fee stamps, to an increase of revenue litigation stimulated by auticipations of a change in the Rent Law of the provinces, by the approaching expiry of the term of limitation for arrears which accrued in the famine period, and by the progress of Settlement operations. The revenue from Copy stamps follows in the main that from Court-fee stamps.

Receipts from the sale of water-marked paper continued to increase, the net receipts rising from Rs. 74,103 to Rs. 78,343.

The charges of the year rose from Rs. 1,42,892 to Rs. 1,46,491; the increase was due mostly to larger payments on account of discount and commission, owing to the larger sales of stamps.

Income tax.

The total collections, viz., Rs. 24,41,906, as compared with Rs. 23,98,997 in the previous year, were the highest on record for the provinces. Of the increase, Rs. 42,909 for the year, Rs. 13,252 were accounted for by the tax on profits of Companies, chiefly Railway Companies, and Mills, and Rs. 25,349 accrued in the collections under Part IV, "Other sources of Income." The number of assessees, however, in the lowest class of incomes (Rs. 500 to Rs. 750) was again reduced, though only by 26; but the reduction in the number of such assessees has been considerable in the period since 1895-96. Prices of grain food-stuffs were high during the year, and there was great activity throughout the provinces, generally in the export trade of grain to famino-affected areas elsewhere. In certain tracts also enhanced receipts were due to prosperity in the sugar-refining trade.

The incidence of the tax per 1,000 of population was Rs. 44 as against Rs. 43 in the previous year. The average amount, however, paid by each assessee remained the same, viz., Rs. 30, as in the two preceding years: one person in every 684 of the population was assessed. The system of employing unofficial assessors to assist in framing assessments was adopted practically throughout the whole provinces. In most districts the Act was worked with an increasing measure of success, and the year's record was, on the whole, a very satisfactory one.

FORESTS.

Area.

The area of the reserved forests increased slightly during the forest year 1899-1900 from 4,005 to 4,049 square miles. In the Central Circle, Naini Tal Division, eight square miles of district protected forest, and in the Kumaun Division, 5 blocks of khair forest, were reserved. There was a slight change in the Oudh Circle, due to rectification of areas, and a small reservation: in the School Circle, there was no change. The area of (1) protected forest and (2) unclassed forest continued the same throughout the year. The area of district protected forest was reduced by the transfer of eight square miles to the reserved area in Naini Tal.

In the Central Circle there were 66 miles remaining for demarcation at the beginning of 1899-1900, of which 19 miles, consisting of boundaries in newly-acquired reserves in the Naini Tál Division, were demarcated during the year. In the Oudh Circle only 43 miles of boundary remain for demarcation; a troublesome boundary dispute on the Kauriyála river in Bahraich being successfully concluded. In the Jaunsár Division of the School Circle 73 miles of ditching boundary were left to be completed. Expenditure on demarcation amounted to Rs. 3,536, Rs. 4,693 and Rs. 1,884 in the Central, Oudh and School Circles.

Comparatively little surveying was done during the year, though in the Oudh Circle 15 linear miles along the Nepal boundary were surveyed.

The working-plan for the Tulsipur forests in Gonda was completed, but not sanctioned, during the year. A plan for the trans-Sarda forest in Kheri is expected to be completed during 1900-1901. The Pilibhít plan awaits the decision of some questions regarding concessions. A new plan for all the Government forests in Jaunsár is under preparation and nearly complete.

One hundred and twenty-six miles of new roads were constructed, and 4,091 miles of existing roads were repaired Expenditure on roads and bridges amounted to Rs. 42,840 in 1899-1900, as compared with Rs. 38,385 in the preceding year, while Rs. 48,933 were spent on buildings, as compared with Rs. 31,241. The total expenditure on buildings and communications was Rs. 97,911, as compared with Rs. 76,230. The increase was largest under the head of new buildings—much attention having been paid to the improvement of accommodation for the subordinate staff.

The number of criminal cases taken into courts increased from 130 in 1898 99 to 159 in 1899-1900, and the number of persons concerned rose from 209 to 301. The percentage of convictions fell from 89 to 79. Cases compounded rose from 445 to 483. The number of undetected cases of injury by fire to forests increased from 74 to 94.

The year 1899-1900 was an unfavourable one for conservancy operations, owing to the early cessation of the monsoon of 1899 and the late arrival of the monsoon of 1900. The results of the year were nevertheless satisfactory. The area under protection amounted to 3,222 square miles and the area burned was only 2.17 per cent. The area burned was considerable in the Oudh Circle only, and there it amounted to 47 square miles in the year 1899-1900, as compared with 73 square miles in the preceding year. In the School Circle the area burned decreased from 46 to 16 square miles, and in the Central Circle, despite the opening of the Jhansi forests to villagers, from nine to seven square miles. The question of the need for further legislation against incendiarism was considered during the year by Government, but the conclusion arrived at was that no necessity had been shown to exist in these provinces.

The area open to grazing decreased from 2,226 square miles to 2,136 square miles in 1899-1900. The number of animals using the forests was 98,550 buffaloes, 415,272 bullocks and cows, 154,779 sheep and

Demarcation.

Surveys.

Working-plans.

Roads and buildings.

Offences.

Conservancy.

Grazing.

goats, and 19,229 other animals, as compared with 91,082 buffaloes, 370,152 large cattle, 148,941 small cattle and 24,443 other animals during the preceding year. The total income from grazing fees fell from Rs. 80,793 to Rs. 78,731.

Outturn.

Timber to the amount of 4,398,000 cubic feet, firewood to the amount of 9,078,000 cubic feet, and minor produce to the value of Rs. 3,60,390 were removed from the forests during the year 1899-1900. The corresponding figures for the preceding year were:—timber 4,086,000 cubic feet, fuel 10,858,000 cubic feet, and minor produce Rs. 3,31,206.

In the Oudh Circle an increase in the amount of timber removed was counterbalanced by a decrease in the fuel exported. The decrease in the School Circle is attributed partly to the depressed state of the timber market in Jaunsár, partly to a diminished output. In the Central Circle there was a large increase in the export of bamboos.

Financial results.

The total receipts differed very slightly from those of the year before, being Rs. 15,93,310 in 1899 1900 as compared with Rs. 16,00,720 in 1898-99. Expenditure, however, increased from Rs. 9,54,203 to Rs. 9,86,023, the increase being mainly in the School Circle, where a large sum is outstanding on account. The surplus for the year ending 30th June 1900 was Rs. 6,07,287, as compared with Rs. 6,46,517 the year before.

During recent years the management of all the forest areas under this Government has been carefully examined, in order to bring the administration into harmony with the policy of the Government of India for the working of the forests with due regard to the interests of the agricultural population.

The investigation has now been practically brought to a conclusion; and though it still remains to issue final orders regarding a few of the forests, all fundamental points have now been settled and only questions of detail remain. The inquiry has shown that the reasonable and unobjectionable requirements of the agricultural population in the neighbourhood of the forests had not in all cases been fully provided for; and it has been necessary in some cases to grant additional concessions, and in others to alter the rules so as to place less difficulty in the way of the enjoyment of existing rights and concessions. The powers of the local Forest Officers have also been enlarged to enable them to act more speedily and effectively by giving free grants to right-holders where villages have been devastated by fire or other calamity.

EDUCATION.

Attendance in colleges and schools. The total number of scholars in public and private institutions increased by 47,532 (from 378,084 in 1898-99 to 425,616 in 1899-1900); the number of institutions by 817 (from 13,137 to 13,954). The increase in the number of scholars mainly consisted in a great increase (41,178) in the number of boys attending primary schools. Although the increase in attendance at primary schools for girls was small, a considerably larger number of girls (15,055 against 12,413 in 1898-99) attended lower primary classes, many of them attending in boys' schools. The

percentage of children at school to the population of school age (according to the census of 1891) was 6.05 against 5.38 in 1898-99 and 5.07 in 1897-98.

The average enrolment and the total expenditure on colleges were 1,439 and Rs. 3,77,736 against 1,345 and Rs. 3,59,686 in the previous year. Of the expenditure, Rs. 1,56,689 were defrayed from public funds (as against Rs. 1,57,298 in the preceding year), the remainder being met from fees and other sources. In the M. A. and D. Sc. examinations of the year the total number of candidates was 34 and of passes 26, against 32 and 18 respectively in the previous year. In the B. A. and B. Sc. examinations there were 226 candidates. The number of B. A. candidates fell from 273 in the preceding year to 219. The disadvantages under which Bachelors in Science were placed if they intended taking up Law as a profession have now been removed, the High Court having consented to accept the general examination in English which is to be prescribed for both candidates for the B. A. and those for the B. Sc. degree. Another important change is that the University has, with the concurrence of the Lieutenant-Governor, adopted a rule that candidates for the Entrance and School Final examinations must be at least 16 years old. There was a noticeable increase in number of affiliations to the Government Sanskrit College at Benares. At the Muhammadan Anglo-Oriental College at Aligarh the average enrolment has risen from 116 to 150.

In public secondary schools (English and Anglo-Vernacular) the enrolment was 25,163, while in the preceding year the figure was 25,397. The expenditure was Rs. 7,50,555, against Rs 7,55,004 in the previous year. Of the expenditure, Rs. 65,349 was met from Provincial revenues, Rs. 1,86,036 from Local funds, Rs. 53,862 from Municipal funds, Rs. 2,99,487 from fees, and Rs. 1,45,821 from other sources. The number of public secondary schools for girls was 41 in 1899-1900, against 35 in 1898-99, and the number of pupils 3,214, against 2,986. Twentyone of these schools, with 1,418 pupils, were schools for Europeans. The number of passes in the Entrance, School Final and English Middle examinations were less favourable, on the whole, than in the preceding year. The number of candidates appearing at the School Final examination rose from 276 to 301. Secondary Vernacular schools for boys numbered 297, with 36,918 pupils, as compared with 294, with 33,811 pupils, in the previous year. In consequence of the recommendations of a Committee of officials and educational experts which met at Allahabad in April 1899, new curricula were during the year under report compiled by the Education Department, both for Anglo-Vernacular and Vernacular schools, the courses of study being generally shortened and the number of examinations reduced.

The number of District Boards' Primary Vernacular schools for boys were — Upper Primary, 1,882; Lower Primary 2,446.

The number of boys receiving instruction in both stages showed a satisfactory increase. Aided Vernacular Primary schools for boys numbered 2,241 against 1,655 in 1898-99. The total number of pupils in these schools was 70,601 of whom 2,507 were in the upper

Colleges.

Secondary Education.

Primary Education. primary stage and 68,094 in the lower primary stage. The enrolment shows a very large increase from the total (49,765) in the preceding year; and this increase promises well for the policy adopted by this Government of advancing elementary education by means of grants-in-aid to indigenous schools. The inspecting staff of several District Boards has been strengthened, chiefly to provide increased supervision for the aided primary schools: thus additional Sub-Deputy Inspectors have been entertained for the Sultánpur, Ballia, Unao, Sítapur, Rac Bareli, Bara Banki and Hardoi districts.

Technical and professional education.

The Anglo-Vernacular Training College for Teachers, Lucknow, was reorganized during the year; the staff has been strengthened, and the college is now established at Allahabad. The number and value of the stipends have also been increased. The number of students rose from 19 to 43, and the result of the examination for certificates was good. The number of normal schools rose from three to four by the opening of the normal school at Moradabad. As regards female teachers, under present arrangements a certain number of young women are efficiently trained as teachers, on a subvention by Government, at the Church Missionary Society's School at Sigra, Benares. The number of students in law classes at the various colleges rose from 372 to 397. At the Agra Medical School there were on the rolls at the close of the year 188 men and 57 women, against 195 and 64 respectively in the previous year. The total number of students at the Thomason Civil Engineering College, Roorkee, was 982, against 888 in 1898-99: the civil students consisted of 86 English and 800 native students, and the military students of 76 English and 20 native students. The health and the work of the students were alike satisfactory. At the Industrial School at Lucknow, the enrolment rose from 106 to 126, but the number of students belonging to the artizan classes is stated to have fallon from 17 to 10. The Government recognises that the school has not hitherto been successful; but measures are in contemplation whereby it may be hoped that things will improve. The reports of the Agricultural School, Cawnpore, were satisfactory.

Female Education.

The total number of schools for native girls, which had been 329 in 1898-99, rose to 351 in 1899-1900. The practice of sending little girls to boys' primary schools has spread very considerably. Of Anglo-Vernacular institutions there were I college, 18 secondary schools, and 9 primary schools. Primary Vernacular schools for girls under public management numbered 152, with 4,100 pupils, against 145, with 3,686 pupils, in 1898-99: and aided primary schools for girls rose from 145, with 5,974 pupils, to 165, with 6,323 pupils.

European Schools.

The total number of aided schools for Europeans and Eurasians was 47 (22 for boys and 25 for girls), as compared with 42 in the previous year. The expenditure from Provincial revenues was Rs. 93,664 in 1898-99 and Rs. 99,772 in 1899-1900. The results of the examinations held under the European Schools' Code were, in comparison with previous years, very satisfactory.

MEDICAL AND SANITARY.

The birth-rate recorded for the whole year was 48.09 per mille upon the last census population (46,904,791), or 46.55 upon the corrected figures (48,454,289), being the highest on record in these provinces since the rate registered in the year 1884. The birth-rate in the districts of Banda, Allahabad, Cawnpore, Lucknow, Sitapur, Hamírpur, Jhánsi, Jalaun and Hardoi shows a specially large increase above the mean ratio in the previous five years. Bulandshahr continued to be the district returning the highest rate of births (63.48). The total number of births recorded during the year was 2,255,627, this being the first occasion on which the number has exceeded two millions. Of the children born, 1,168,209 were boys and 1,087,418 were girls, the proportion being 107.4:100. Births of male children increased by 258,463, and births of female children by 245,439.

The mortality was higher than that of the preceding year, the deathrate being 33·19 per mille, calculated upon the census population, or 32·13 upon the adjusted figures. For 1898 the figures were 27·38 and 26·93 respectively. The total number of deaths recorded rose from 1,284,319 in 1898 to 1,556,821 in 1899. There were 817,067 deaths of males and 739,754 deaths of females recorded during the year, the ratios of mortality being respectively 33·62 and 32·73 per mille. The infant mortality rate increased from 224·0 per mille in 1898 to 264·7 in 1899.

The mortality rate in towns was 3904 per mille, as compared with 33.41 in 1898: for rural tracts the figures were 32.76 and 26.94 respectively per 1,000. In municipalities the death-rate ranges from the abnormal figure of 72.70 in Kosi to 14.67 in Mussoorie.

The chief figures in regard to the principal diseases are compared with those of the preceding year in the table below:—

			Number of death			
Cause	e of mortality	•	1898.	1899.		
Cholera	•••		 2,508	8,142		
Small-pox			 $2,\!419$	2,096		
Fever			 1,063,596	1,245,260		
Dysentery a	nd diarrhœa		 23,574	27,206		

With the single exception of the preceding year, when the mortality from cholera was the lowest recorded, the death-rate in 1399 from this disease was the smallest since 1881. The only portion of the year during which there was any prevalence of the disease was from August to November. The highest mortality occurred in Garhwál, Fyzabad and Dehra Dún, the two former being the only districts where any considerable area was affected. Out of a total of 107,239 villages in the provinces, 1,049 only were visited by cholera. No outbreak of the disease occurred at any of the large fairs. The absence of small-pox in 1899 was even more marked than in the preceding year, the total number of deaths falling from 2,419 to 2,096 and the death-rate per mille from 05 to 04. No lower rate has been recorded since 1871, when trustworthy registration began. No high mortality occurred in any district. The mortality per 1,000 from fever rose from 22.67 to 26.55 and, as usual, was slightly higher in urban than in rural areas. The mortality continued to be

Vital statistics.

Disease.

heavier in the western than in the eastern divisions. Among towns, Gonda, Cawnpore, Aligarh and Gháziabad showed high death-rates from fever. The mortality from dysentery increased, the death-rate rising from 50 to 58 per mille. Among districts, Garhwál, Almora, Dehra Dún and Benares reported the highest death-rate; in Benares, however, the mortality was chiefly in the city. Hardwár Union, Káshipur and Háthras were other towns where a high mortality from dysentery occurred.

The monthly mortality during the year followed, in the main, a normal course. The maximum point attained in May was higher than usual, possibly because more rain fell in April and May than usual. The autumn mortality, though higher than that of the preceding year, was well below the decennial average. The fact that the maximum was reached in September, instead of (as usual) in October, may doubtless be attributed to the early cessation of the rains.

Sanitary measures. The following statement shows the sums expended on sanitation by certain of the larger municipalities during 1898-99:--

	Name of municipality.				Sums expended on—			
					Water- supply.	Drainage.	Consor- vancy.	Murkets, &c.
					Rs.	Rs.	Rs.	I}s.
Agra	114	•••	•••	şat	63,552	1,329	48,526	3,778
Cawupore	111	***	•••	•••	77,661	16,094	89,695	970
Allahabad	***	•••	***	***	69,246	1,963	71,823	8,275
Benares	•••	•••	•••	***	75,840	46,643	66,909	1,984
Naini Tál	***			***	1,61,955	4,,	20,453	
Lucknow					52,008	3,794	96,052	2,569

Samples of water of each municipal water-works have been regularly sent for bacteriological analysis, and have almost invariably been pronounced pure.

At Agra the engines of the water-works were put in thorough repair, and the construction of a fourth filter was undertaken (it has since been completed); in Benares some progress was made with the extension of the sewerage system: in Cawnpore a new sewage scheme was laid before the Board: and in Naini Tál the new water-supply was practically completed.

For the greater part of the year the provinces remained entirely free from plague. The system of circle organization and inspection, which had been successful in dealing with the outbreak in 1897 at and around Hardwar, was applied during the year to certain districts in the Meerut, Gorakhpur and Benares Divisions as a safeguard against the introduction of the disease from the Panjab or Bengal. A reduction of the staff was effected during the rains; but inspections were renewed on the approach of the cold weather. The opportunity was also taken to issue a revised edition of the Plague Regulations published by this Government.

Vaccination.

The total number of persons vaccinated was 1,511,436 and the number of successful re-vaccinations 47,292, against 1,398,684 and 41,776 in the preceding year.

The increase in the number of successful primary vaccinations was spread over 40 districts, being most marked in Gorakhpur, Aligarh, Hardoi, Saháranpur, Azamgarh and Meerut. The ratio of deaths from small-pox per 10,000 of the population was '4 in 1899 against '5 in 1898, both years having been years of unusual immunity from the disease. Mortality from small-pox was highest in the Oudh and eastern districts, which are, on the whole, less well protected by vaccination than the districts in the west of the province: 531,100 children under one year of age were successfully vaccinated in the 1st Circle and 317,575 in the 2nd Circle. The number of successful primary operations in municipal towns was 116,656, and of successful re-vaccinations 3,071, as compared with 101,828 and 2,545 respectively in the previous year: the proportion successfully vaccinated per 1,000 of the population in such towns being 33:10 in 1898-99 and 37:97 in 1899-1900.

The population of the four lunatic asylums (viz., at Bareilly, Benares, Agra and Lucknow) rose during the year from 1,030 to 1,115. The large number of admissions (319), which showed a great increase on those of previous years, is partly explained by the transfer of harmless criminal lunatics from central jails to the Agra and Bareilly Asylums. The Benares Asylum was the one in which there was most pressure on the space; the number of inmates there closely approached the available accommodation, and at times exceeded it. Five Europeans and Eurasians were admitted to lunatic asylums during the year, making a total of 20 of this class confined : two were cured and discharged. Buildings for the reception of all European lunatics are under construction at Agra; but, pending the completion of these, they are confined in all the Four escapes of lunatics were reported asylums except Lucknow. during the year, three being from the Lucknow Asylum and one from Agra. In two cases the lunatic was not recaptured.

The total mortality in the asylums fell from 87 in 1898 to 72 in 1899, there being a marked decrease in all the asylums except Agra. The Lucknow Asylum continued to show the highest death-roll (21), the highest number of admissions to hospital (454), and the greatest percentage of mortality (9.3). Sixteen of the Lucknow patients who died were, however, reported to be in indifferent health upon admission. Of the total number of deaths which occurred, 10 were due to anæmia and debility, 10 to phthisis, and nine each to dysentery, pneumonia and epilepsy.

The causes of insanity were recorded as known in about half the number of cases admitted. In 113 cases out of the 156 thus recorded, insanity was attributed to physical and in 43 cases to mental causes. The proportion of cases recorded as known varies considerably in different asylums. In 63 cases, or rather less than 20 per cent. of the total number admitted, insanity was attributed to the use of intoxicants.

The expenditure on construction and repairs amounted to Rs. 6,886, compared with Rs. 7,498 in the preceding year. Rupees 69,888 were

Lunatic Asylums. spent in the maintenance of lunatics, as compared with Rs. 74,486 in 1898, the reduction being mainly effected under the head of diet. The friends of lunatics contributed Rs. 2,182 towards their support, and Rs. 6,017 were realized by asylum industries. The net cost per head to Government amounted to Rs. 58-15-8, or about Rs. 2 less than in 1898. Out of the sum of Rs. 300 per annum sanctioned by Government for each asylum, for the purpose of providing amusements for the lunatics, a sum of Rs. 623 was expended during the year, and the results are reported to have been beneficial. The project for establishing a central asylum at Agra, mentioned last year, remained for a while in abeyance pending the decision of the question whether the site of the asylum would be wanted for a combined railway station. That question has been decided in the negative, and work will now be resumed.

Dispensaries and Charitable Institutions. There were 374 hospitals and dispensaries, or five more than in the previous year. The total number of persons treated was 3,998,665, or 141,821 more than in 1898. The percentage of the population who sought medical relief in dispensaries was 8.52 as compared with 8.22 in 1898; and the daily average of indoor patients rose from 2,413 to 2,468. The general attendance at dispensaries increased in 33, while it decreased in 15 districts. The total number of beds available in hospitals and dispensaries was 4,040, and were in excess of the normal demands upon them. The institutions in which the accommodation available was most taxed were the Colvin Hospital, Allahabad, the Prince of Wales' Hospital, Benares, and the Sítapur Sadr Dispensary.

Only 520 cases of cholera, and of small-pox 289 cases, were treated in the dispensaries of these provinces. Aid in attendance or medicines was, however, afforded in 3,025 cholera cases, as compared with 424 in 1898. Cases of malarial fever treated decreased from 691,979 in 1898 to 661,153 in 1899, while those of dysentery increased from 87,526 to 98,103. The number of operations of all kinds performed during the year was 180,190, as compared with 175,708 in 1898. total income for the year amounted to Rs. 786,211, and the expenditure to Rs. 7,89,407. Receipts from Government increased by Rs. 4,744, and receipts from local and other funds by Rs. 38,672. Subscriptions increased by Rs. 3,337. The main charges for the two years present little variation, excepting under investments, the sum of Rs. 90,000 having been invested on behalf of the Lady Lyall Hospital, Lucknow. The total capital invested on behalf of the dispensaries of these provinces is now Rs. 15,80,500.

Agra Medical School

There were 188 male students at the Agra Medical School, of whom 43 passed out at the final examination. There was a decrease in the number of civil students and in the number on the rolls of the highest class. Under all other heads there was an increase in the total number of students. In particular, the number of military pupils admitted to the first year class increased from 11 in 1898-99 to 21 in the present year. The number of private pupils continued to increase. The average number of marks gained at the final examination by civil, Rájputána, and private pupils was higher than in 1898, while the average marks of military pupils slightly decreased. There were 56 female students as

compared with 63 in 1898-99. The whole of the first class, viz., nine girls, obtained their diplomas. Seventeen female students passed their class examinations out of 30, as compared with 14 out of 27 in the preceding year. Various improvements to the equipment of the school were made during the year, including the purchase of a bacteriological microscope and various works of reference for the library. It is in contemplation to build a new Lady Lyall Hospital at Agra, and to utilize the existing buildings as an ophthalmic hospital in connection with the Agra Medical School.

LOCAL SELF-GOVERNMENT.

There was no change in the number of District Boards and District Committees constituted under Act XIV of 1883, nor was any legislation carried out during the year in regard to these bodies.

A new feature of the year in the matter of accounts was the transfer of the administration of Cattle Pounds to the control of the District Boards with effect from the 1st April 1899, and to this is due the appearance for the first time in the accounts of these bodies of the head "Police" under which all receipts and charges relating to Pounds are classed.

The total income for the year amounted to Rs. 52,88,338, this figure being inclusive of an aggregate subsidy of Rs. 5,96,433 from Provincial Revenues to cover the deficits in the accounts of certain District Boards. The expenditure amounted to Rs. 51,98,727 and included a sum of Rs. 5,39,915 contributed by surplus boards to Provincial Revenues for the cost of untransferred services.

The opening balance of the year (inclusive of debt accounts) was Rs. 8,29,310. The closing balance on the 31st March 1900 stood at Rs. 9,15,834.

Education continued on the whole to make satisfactory progress, as shown by a large increase in the number of scholars on the rolls and the improvement generally in the results. The extension of primary teaching received especially careful attention. The advancement made in female education was only moderate owing partly to the indifference of the people and partly to the want of an adequate supply of competent school mistresses.

There was a large increase in the number of patients attending the dispensaries; and greater interest in these institutions was evinced by the general public, who contributed more largely than in the previous year towards their support.

The work of this department is gaining in popularity: and there was a substantial increase in the operations performed and in the percentage of successful cases. The attitude of the people towards the work was on the whole favourable.

The work of this Department, so far as it was directly controlled by the District Boards, was carried out in a satisfactory manner.

The unfavourable character of the rainfall interfered to some extent with the conduct of arboricultural operations. But so far as circumstances permitted, useful work was done by the unofficial members of the District Boards and by private individuals.

Legislation and Constitution,

Arboriculture.

XXX

Civil Veterinary Department. Much good work resulted in the districts in which Veterinary Assistants are employed. These employes rendered valuable service in connection with cattle disease where this was prevalent. Some advance in the local interest taken in the breeding of horses and cattle was observable during the year; and the services of the Veterinary Assistants were appreciated by the people.

Vital Statistics.

In four divisions, and in certain districts of another division, the testing of vital statistics appears to have been carried out with care. There is, however, generally much room for improvement both in respect of the quantity and quality of the work done. In many cases the adequacy of the testings actually made seems open to doubt, as few errors or omissions were reported to have been discovered.

Sanitation.

The action taken by the District Boards under the Village Sanitation Act appears to have been restricted, and few of the boards utilized to the full extent the allotments specially sanctioned in their budgets for village sanitary improvements.

General Remarks.

The record of the year's work was one of genuine progress. The work was effected to a considerable extent by official agency; nevertheless, an increasing amount of assistance was rendered by individual members of District Boards. The names of a large number of gentlemen were brought to the notice of the Government for their public spirit generally or for the service rendered by them in one or more of the branches of the Board's administration.

MUNICIPAL.

Legislation.

The Bill to make better provision for the organization and administration of Municipalities in the North-Western Provinces and Oudh was passed by the Local Legislative Council (I of 1900), during the year, and received the assent of the Governor-General in Council on the 20th February 1900.

Number of Municipalities. The number of Municipalities in the Provinces remained at 104, as in the previous year.

Seats were contested in 64 Municipalities.

Chairmen.

The District Magistrates in the following six important Municipalities are ex-officio Chairmen of the board:—

Agra, Allahabad. Bareilly,

Benares. Lucknow. Moradabad.

In all other Municipalities constituted under Act XV of 1883 the Chairmen are elected by the boards.

Constitution of Boards and attendance.

The average number of meetings held by the boards and committees was 22.7 as compared with 21.4 in 1898-99. The average number of members on each board was 15.8 as against 15.3 in the previous year. The average number present at each meeting has increased from 8.7 to 9.1, and the average attendance at each meeting from 56.5 to 57.6 per cent. of the total number of members.

Income and expenditure,

The gross income of the Municipalities, including opening balances which aggregated Rs. 14,08,422, was Rs. 58,82,227, as against Rs. 54,52,955 in the previous year. The expenditure was Rs. 47,31,733, as against Rs. 44,05,533 in 1898-99. The closing balances aggregated Rs. 11,50,494.

Octroi.

Octroi taxation was in force, as in the previous year, in 81 Municipalities. The necessary preparations were made for imposing the tax in Dehra, and it was actually started from 1st April 1900. Octroi yielded a total gross income of Rs. 35,19,703 as compared with Rs. 33,57,063 in 1898-99. The total net income realized from this source, after deducting refunds, was Rs. 26,40,766, or 70.8 per cent. of the total realizations from municipal rates and taxes, as compared with Rs. 25,76,206, or 71.3 per cent. in the previous year. There was thus an increase in net income from the octroi tax of Rs. 64,560. In contrast with the much greater rise under gross receipts, this figure is indicative of the abnormally active character of the year's trade through municipal marts. The year was marked by a poor *kharif* and cane harvest in many parts of the provinces.

The expenditure on conservancy increased from Rs. 9,71,262 to Rs. 9,86,053, the provision of more latrines and scavenging apparatus being recognized by most boards as a proper claim on their improved incomes.

A more detailed description of these works is given elsewhere. On the whole, the works were controlled with care and economy: except at Agra, a larger quantity of filtered water was supplied by all the waterworks while the average cost per 1,000 gallons decreased appreciably. The increased cost of maintenance at Agra was due to justifiable measures taken to repair and improve the machinery. The consumption per head of population of the Municipal water supply is still wasteful at Benares; but elsewhere the efforts taken to prevent misuse of water met with success. The quality of the water supplied in all the towns was of a high standard of purity.

The boards expended on education Rs. 1,42,893 as compared with Rs. 1,42,419, and there were 569 educational institutions, with 36,076 pupils, supported or aided by the boards, as compared with 565 institutions and 36,509 pupils in the previous year. Despite the apparently stationary character of the progress of education in municipal areas, there was a perceptible advance among the majority of the boards in the recognition of their duties towards primary and elementary instruction.

The death-rate increased from 34.23 to 38.92, while the birth-rate rose from 39.27 to 48.95. The latter rate reflects the general healthy circumstances of the year. The prevalence of malarial fever in several of the towns accounts partly for the higher death-rate recorded.

The results of the year's working of the Vaccination Act in the municipalities exhibited a large measure of genuine progress; and municipal areas are generally now well protected.

As in the previous year, the operations of the Local Audit staff were helpful to the large number of the boards whose accounts were audited during the year. The results of the action taken upon past audits are shown by the improved administration which is observable in many of the municipalities, and by the rapidly decreasing number of abuses and frauds whose detection is now reported. The year was one of genuine progress in the working of Municipal Self-Government and in the results reaped by the boards. The returning prosperity which set

General results.

in in the previous year was continued during the year under report, although the high prices of grains caused by the unfavourable conditions elsewhere bore heavily upon the poorer urban populations. With one or two exceptions, where suitable action has been taken by the Government, the administration of the boards is satisfactory, and in no case does the present state of their finances give any serious ground for anxiety.

POLICE.

Statistics of crime.

Reported crime rose from 181,708 cases in 1898 to 185,613 cases in 1899. The figures for 1898 indicated a condition of things that was something better than normal; and the year 1899 shows no material retrogression. Including 1,074 cases pending at the beginning of the year, and 1,715 cases taken up by station officers otherwise than upon report, the total number of cognizable cases which came to the notice of the Magistracy or the Police was 188,402. Magistrates either on complaint or of their own initiative took up 15,952 of these cases; and 172,450 were reported to, or taken up by, police officers. Excluding 417 cases pending from the previous year, there were 15,535 Magistrates' cases for disposal. Preliminary investigations under section 202, Criminal Procedure Code, resulted in the dismissal of nearly half this number (7,539); and 1,950 cases only were referred to the police for enquiry. The percentage of convictions increased from 43 in 1898 to 47 in 1899. The number of cases investigated was 90,529 in 1898 and 90,430 in 1899. The total number of cases reported (excluding cases taken up suo motu by station officers) during these years was 164,966 and 170,078. The percentages of cases investigated at once on report were 53 and 52 respectively. The tendency of the percentage of investigations ordinarily to decrease is attributed to the continued operation of the orders forbidding enquiry into petty thefts and burglaries without loss, in which no investigation is desired by the complainant. In 54,853 cases, or 60 per cent. of those investigated, the accused were sent before the Magistrate, and in 26,526 cases, or 29 per cent., no clue was obtained or no arrests were made. The total volume (56,285 cases) of case work (together with cases pending in courts at the beginning of the year) sent by the police before Magistrates was somewhat lighter than in 1898 (57,574 cases); and of the number disposed of, 45,579, or 89 per cent., ended in convictions, as compared with 88 per cent. last year. The proportion of success in courts indicates that discrimination was shown by the police in sending cases for trial. The increase of 3,905 cases which occurred in 1899 in the total volume of cognizable crime was mainly under the heading of serious offences against person and property or property only. This increase is attributed partly to burglaries due to high prices of food in a portion of the provinces, and partly to increased reporting by the public under this class. The agricultural conditions of the year were much less favourable than in 1898; and, in view of the scarcity which threatened a portion of the province, the crime return, as a whole, is lighter than might have been anticipated, being still much below that of the years preceding 1898.

Under cognizable cases, 3,097 Magistrates' cases, out of 5,834 decided, ended in conviction, and 46,201 Police, cases out of 52,585 decided, ended in conviction. The percentage of cases convicted to cases investigated

and of persons convicted to persons arrested (under Police cases) were 50 and 81 respectively, against 52 and 83 in 1898. Non-cognizable crime showed an increase of 18 per cent., the figures rising from 78,688 in 1898 to 84,162 in 1899. The increase occurred mainly under the heads of offences against municipal bye-laws and voluntarily causing hurt. The number of non-cognizable cases which the police were required to investigate continues steadily to diminish, and the decrease is evidence of increasing care on the part of the Magistrates in themselves holding preliminary enquiries.

True cases of dakáiti increased from 358 in 1898 to 405 in 1899, and professional cases, in which firearms were used, increased from 117 to 125. The districts with the highest return of cases were Agra, Jhánsi, Etah, Moradabad and Kumaun. The statistics of convictions point to less successful police work in dealing with this crime. Arrests were made in 229 cases; and the percentage of cases convicted to cases reported was 28.8, and of cases convicted to cases disposed of, 61.7. In 1898 the figures were 30.2 and 62.8. Success was least in respect of armed gang dakáitis, of which only 19 per cent. were worked out to a conviction. For this failure in detection the districts of Agra, Jhansi and Kumaun are mainly responsible. It was reserved for the officers of the Thagi and Dakáiti Department to capture Mohan, Kachhi, a dakáit leader of notority, and thereby to furnish the Agra police with the means of exterminating the gangs. In Jhansi the police were equally unsuccessful; this general failure, however, was, to some extent, redeemed by the good work of individual officers. A satisfactory feature in 1899 is the number of instances in which villagers turned out to defend their property.

Coining cases increased slightly in 1899, and, as a rule, were successfully worked out. This class of crime is extending, and greater efforts to check it are necessary. The matter is engaging the attention of Government. In cattle theft cases a further decrease occurred; the number of true cases reported was 8,579 in 1897, 4,286 in 1898 and 3,654 in 1899. The percentage of convictions in cases disposed of fell from 83 to 77. The total number of cattle sales registered at private markets increased during the year from 929,484 to 963,425, while registrations at police stations declined.

The sanctioned strength of the Provincial District Police during the year 1899 was 24,568. Their cost increased from Rs. 55,68,598 in 1898 to Rs. 55,84,566 in 1899. The strength of the armed reserve increased from 7,279 to 7,518. The total strength of the town police enrolled under Act XX of 1856 was 3,215 in 1898 and 3,212 in 1899. Their total cost increased from Rs. 2,04,366 to Rs. 2,07,299. Municipal police numbered 6,595 at a cost of Rs. 5,05,430, as compared with 6,685, costing Rs. 5,07,926 in 1898. The strength of the Railway police was augmented from 818 to 889 men, and their total cost amounted to Rs. 2,82,766. The estimated expenditure of the whole department for the financial year was Rs. 81,61,860, while actual expenditure during the calendar year under report fell Rs. 2,30,902 short of this. There were 61,415 chaukidárs in the North-Western Provinces and 26,979 in

Professional crime.

The Police Force.

Oudh, as compared with 61,168 and 28,789, respectively, in the previous year. The total cost of the Village police of the provinces rose from Rs. 28,97,123 in 1898 to Rs. 30,34,236. This increase is mainly in Oudh, where fair progress was made during the year with the scheme for substituting cash wages, paid in most cases through Government, for remuneration by jagirs held from the zamindárs. Rewards were given to 6,849 police officers in 1899 as compared with 5,991 in 1898, and the amount paid increased from Rs. 49,249 to Rs. 51,541. The punishment roll of the year showed an increase. There were 8 charges of torture, of which 3 ended in conviction and 5 in acquittal. Excluding cases of judicial punishment, the total number of penalties inflicted on members of the district police rose from 936 to 984. Fines and suspensions were more sparingly resorted to, while dismissals increased from 248 to 290. The increase is mainly due to the large number of dismissals which it was necessary to make in the Jhansi district in connection with the cowardice shown at the encounter with the Karar Khera dakaits. total number of punishments inflicted on the rural police were fewer than for the past five years: there was an increase in the number of suspensions, but all other forms of punishment were rarer. During the year a scheme for the reorganization of the Railway police and the redistribution of the grades therein was submitted for the approval of the Government of India. A reallocation of the mounted police was carried out. The question of revising the rules for the Police Training School came under consideration. The Training School is about to be removed from Allahabad to Moradabad,

INFANTICIDE.

The Act was in force in the following districts of the North-Western Provinces :- Saháranpur, Muzaffarnagar, Meerut, Agra, Etah, Mainpuri, Etawah, Farrukhabad, Cawnpore, Hamirpur, Jalaun, Bijnor, Barcilly, Budaun, Sháhjahánpur and Basti. Three hundred and sixty villages were under the rules at the beginning of the year, and the exemption of 92 villages reduced the number to 268. One hundred and four of these are in the Mainpuri district. The next largest number in any district is 31 in Saharanpur. The total population under 6 on 1st April 1899 was 3,406 boys and 2,217 girls, and that on 1st April 1900 was 3,393 boys and 2,398 girls. (In these figures villages which were exempted during the year are omitted.) The average ratio of births as between boys and girls in infanticide districts was 54 boys to 46 girls, the corresponding Provincial rates for 1899 being 52 and 48. The average death-rate of children under one year in infanticide districts was 52.34 boys to 47.66 girls. The proportion of boys to 100 girls was, at the commencement of the year, 153 and at its close 148. In Muzaffarnagar there are now only 6 villages under the rules. In the Mecrut district, though there are still 9 proclaimed villages, only 1 village (inhabited by Gujars) is viewed with suspicion. The Mainpuri district still has 104 registered villages, or far the largest number of any district in the provinces: 13 of these are on the "specially guilty" register. Of the 5 villages that were under the rules in the Cawnpore district 3 have since the close of the year been exempted. In Jalaun also two out of the 6

villages have been exempted, as have also all the 5 villages in the Hamír-pur district. In Bareilly proposals for the exemption of 5 of the few remaining villages have recently been sanctioned by Government. In the other districts to which the Act is applied there is still some suspicion of infanticide, though in a diminishing degree.

CRIMINAL TRIBES.

The number of Sanauriahs (in Lalitpur sub-division of Jhánsi district) on the register at the beginning of the year was 232 and 241 at its close. The corresponding figures for Barwárs (Gonda district) were 3,803 and 3,836. Those for Sansiahs settled in various districts were 95 and 89, and settled in the colony in Kheri district 146 and 155. Twenty Sanauriahs absconded, but of these seven returned of their own accord after an absence of a few days. One Sanauriah only was convicted under the Indian Penal Code. The number of registered Barwars shows an increase from 3,803 to 3,836, due to excess of births over deaths. The number of villages was reduced from 47 to 45 by the Deputy Collector in charge inducing certain Barwars to move from villages where they had no land. At the close of the year 177 Barwars were in jail, and 557 were absent and absconding. During the year the Government sanctioned, for three years, an allotment of Rs. 200 for the purpose of supplying bullocks and making advances for seed to Barwars in need of assistance. The number of registered Sansiahs settled with zamindárs in various districts is now 89 only. The number of Sansiahs settled in the colony in the Kheri district rose from 146 to 155. The crops were good and the colonists behaved well. One thousand four hundred and seventy-two Doms in the Gorakhpur district, though not proclaimed under the Criminal Tribes Act, are under police surveillance. The advance towards the reclamation of this tribe is very slow. The settlement of Haburahs (159 in number) in the Moradabad district is well reported on.

The total number of eunuchs on the register, which had decreased in the preceding year from 525 to 483, fell to 456 in the year of report. The largest numbers of eunuchs are in Cawnpore, Ballia, Rae Bareli, Hardoi, Bahraich and Bara Banki districts. The names of 29 eunuchs who died were removed from the roll, and 2 others are said to have permanently left the provinces. There were three prosecutions during the year, in two of which eunuchs were convicted. No case of emasculation was reported. The registers appear to have been properly maintained in almost all districts, and in nearly all districts inspections, both of registered and unregistered eunuchs, were regularly made. The provisions of the Act appear to have been satisfactorily administered during 1899 in these provinces.

CRIMINAL JUSTICE.

In the North-Western Provinces the number of offences (1) reported, (2) returned as true and (3) brought to trial during the year were respectively 125,751, 99,063 and 89,806 as compared with 124,072, 97,326 and 88,906 in the previous year. For Oudh the corresponding figures were 43,002, 31,478 and 32,104 against 42,557, 31,275 and 31,879 in 1898. There has been a slight increase, a little over one per cent., in both provinces in the total number of offences reported. In both

Eunuchs.

Offences.

xxxvi n.-w. p. and outh administration report, 1899-1900.

provinces the increase occurred chiefly under the head of offences against special and local laws.

Convictions.

The number of persons brought to trial in the North-Western Provinces was 147,464, of whom 80,528 were convicted (39,782 being under the Indian Penal Code) and 63,842 acquitted or discharged. For the preceding year the figures were 140,035, 79,270 and 57,629. The percentage of convictions to persons brought to trial was 54, against 56 in 1898. In Oudh 51,980 persons were brought to trial, of whom 26,916 were convicted and 23,765 acquitted or discharged, against 51,735, 27,648 and 22,789, respectively, for the preceding year. The percentage of convictions (52) was again lower than in the previous year (55), but this falling off is for the most part confined to the less serious offences, while convictions in respect of the graver offences have generally improved.

Work of courts.

Honorary Magistrates in the North-Western Provinces disposed of 20,375 cases involving 27,786 persons, or about 23 per cent. of the total number of cases tried by Magistrates.

In Oudh Honorary Magistrates disposed of 7,886 cases, or about one-fourth of the total number of Magistrates' cases. There has been a gradual and steady rise in the disposal of work by this class of Magistrates, which renders valuable and efficient aid to the administration.

In the North-Western Provinces, Sessions Judges disposed of 2,133 cases as compared with 2,054 in the previous year, involving 4,392 persons against 4,126 in 1898, and there were pending at the close of the year 247 cases as compared with 204 in the previous year.

Sessions Judges in Oudh disposed of 634 cases, involving 1,122 persons, against 623 the year before, in which 1,205 persons were involved, whilst the number of cases pending at the close of the year fell from 60 to 43. This improvement in the state of the pending file is attributed partly to the appointment of an Assistant Sessions Judge, who decided 32 cases during the year. The number of appeals preferred in Courts of Session in the North-Western Provinces was 7,815 compared with 8,345 in 1898, and the percentage of convictions upheld was 78 against 75 in the previous year. In Oudh 2,333 appeals were preferred, involving 2,724 persons, against 2,402 and 2,922 in the year before. There was an increase from 8.5 to 10 in the percentage of these cases in which the sentences were reduced or altered, whilst in those reversed there was a slight decrease from 11.2 to 10 per cent. as compared with 1898.

In the High Court of Judicature there were about the same number of appeals for hearing as in the previous year, viz., 1,227 against 1,255, and the disposals were about the same also in the two years, being 1,200 in 1899 and 1,269 the year before, whilst the percentage of unsuccessful appellants fell from 85 to 81.

The work of the Judicial Commissioner's Court in Oudh, which was slightly lighter than in 1898, continued to be presided over by three Judges. During the year 703 appeals (including 5 preferred by the Government) were filed as compared with 684 in the previous year, the average duration of these being 38.3 days against 42.7 in 1898, whilst the percentage (79) of sentences upheld was the same as last year.

Juvenile offenders.

Eighty-one juvenile offenders were released in the North-Western Provinces under section 31 of the Reformatory Schools Act, and 404 persons were similarly treated under section 562 of the Criminal Procedure Code. The number of youths sent to the Bareilly Reformatory from both provinces was 68 against 60 in the previous year, and there was a slight improvement in the number of juveniles dealt with in Oudh under the first offenders sections of Act VIII of 1897.

JAILS.

The total number of convicts in the jails of these provinces (exclusive of under-trial prisoners and civil prisoners) at the end of 1899 was 27,921, against 27,833 at the end of 1898. The daily average of the convict population was decidedly below that of the previous year. The number of females imprisoned on conviction during the year was 2,191, as compared with 2,793 in 1898. The number of civil prisoners admitted to jail was again somewhat high (1,447); but the total is not sufficiently large to allow of any certain conclusions being drawn from fluctuations. Of the convicts admitted to jail during 1899, 3,725 (3,591 males and 134 females) or about 11 per cent. of the total number admitted, had been previously convicted. The percentage was 12 in 1898. The number of the habituals who were not identified before admission in 1899 was only 52 against 78 in the previous year. In all districts the work of tracing previous punishments was efficiently done. The number of convicts released from jails in 1899 was 32,847, as compared with 37,731 released in the previous year, in which there were exceptional releases of a number of shortterm prisoners confined for offences connected with scarcity. For the first time there is a diminution in the number of releases under the good conduct rules. There were 6 escapes in the year, four of these being escapes while employed on extramural labour. Two hundred and sixtythree juvenile prisoners (212 males and 51 females) were admitted, as compared with 266 in 1898. During the year a special ward for the confinement of juvenile female prisoners was opened in the Central Prison at Lucknow.

In 1898 a great improvement took place, compared with 1897, as regards the sickness and mortality in jails, and a further improvement took place in 1899. The ratio of admissions to hospital was 791.8 per mille, as compared with 920.5 in 1898; the daily average of sick was 37.8 per mille, as compared with 46.7; and deaths from all causes fell from 28.7 per mille in 1898 to 22.2 in 1899, which was the lowest recorded, with the exception of that for the year 1893. The prisons showing the highest death rates were Gházipur District Jail, 46 per mille; Mirzapur, 89; Bánda, 48; besides Lalitpur and Pauri 5th class jails, in which the total strength was small, and the proportion of deaths, therefore, is not a sure criterion. The Mirzapur and Bánda jails also show a daily average number of sick far above the Provincial average. One death only in 1899 was attributed to cholera, though it is suspected that four other deaths at Mirzapur were due to that disease. The number of deaths from dysentery fell from 190 to 144. One hundred and twenty-one deaths were due to pneumonia, against 135 in 1898.

The total expenditure on maintenance and guard, excluding the cost of alterations and repairs of jails, amounted to Rs. 12,37,507, as compared

Population.

Health.

Financial.

The average cost per head fell from with Rs. 14,12,152 in 1898. Rs. 43-15-10 in 1898 to Rs. 42-3-7 in 1899. The decrease took place chiefly in the dieting charges, which fell from Rs. 7,13,212 in 1898 to Rs. 5,89,711 in 1899: this fall in expenditure is due to the decrease in the daily average number of prisoners in confinement and to the favourable rates at which grain was bought for storage. The percentage of grain stored to the total quantity consumed was 72, and in every jail where storage operations were carried out, a profit resulted as compared with purchasing at market prices. Under other heads of expenditure there was a saving in establishment due to the abolition of the temporary establishment which was entertained up to October 1898 in connection with the Chunár temporary jail, and a decrease under hospital charges due to better health of the prisoners. During the year Rs. 40,000 were granted by Government for the erection of cubicles for separate confinement, which are now being constructed in the habitual barracks in the Allahabad, Agra and Barelly Central Prisons. The net cash earnings of labouring convict during the year stand at Rs. 1,78,690, giving an average carning of Rs. 6-9-0 per head on convicts sentenced to labour. The net cash earnings show a small increase over those for 1898 (Rs. 1,78,108); but, the number in jail being less, the average earning per convict sontenced to labour shows an appreciable rise (Rs. 5-14-0 to Rs. 6-9-0). The cash earnings were highest at Allahabad and Agra among Central Prisons, and at Allahabad, Agra and Jaunpur among District Jails.

The Bareilly Reformatory.

There were 66 admissions to the reformatory, against 69 in 1898, and the number of inmates at the end of the year was 256 (against 240). The daily average number of boys (247) was higher in 1899 than that in 1898 (235) or in preceding years. The accommodation of the reformatory, which is for 232 inmates with separate cubicles and 24 in hospital, was not exceeded. The health of the school, which had been indifferent in the previous year, showed a satisfactory improvement. No deaths took place. All the boys are taught agricultural work in addition to any other trade which they may be learning, the latter trade being chosen, as a rule, with regard to their caste and probable future occupation. Tho expenditure per boy during the year was Rs. 53-11-0, as compared with Rs. 54-7-0 in 1898. The total expenditure was Rs. 13,274, against Rs. 12,793. The profit earned by the farm and factory was Rs. 1,000, as compared with Rs. 791. Tailoring, shoemaking and agriculture gave the best results. Steps have been taken for carrying into effect in those provinces the Resolution of the Government of India deciding that all reformatory schools should be placed under the charge of the Education Department, and the selection has been made of a suitable man for the post of Superintendent of the School, which will be removed, before long, from Bareilly to Chunár.

Original suits.

CIVIL JUSTICE.

Institution of suits in the North-Western Provinces fell from 99,172 in 1898 to 87,440, and the disposals from 100,275 to 90,099, the pending file at the end of the year being only 8,534, the lowest on record since

1887 when the number was 8,222, whilst the figures relating to institutions and disposals were the lowest within the last 20 years except 1884. The average duration of contested cases has risen from 62 to 68 days, whilst in uncontested cases it has been about the same as last year. In the duration of appeals there has been an appreciable fall, especially in District Judges' Courts, where the figures were 184 days as compared with 246 in 1898.

In Oudh the number of institutions of civil suits fell from 51,506 in 1898 to 48,842, and the disposals from 53,782 to 48,313, resulting in an increase of 1,469 in the number of cases pending at the close of the year as compared with the previous year. The average duration of both contested and uncontested cases as compared with last year has somewhat improved: the figures being 77.28 and 69.17 in the case of the former and 36.00 and 32.64 in that of the latter.

In Kumaun there has again been a decrease in the number of institutions, the figures having fallen from 4,959 in 1898 to 4,539, whilst the percentage of disposals rose from 90 to 92; the pending file at the close of the year being 420 as compared with 570 in the previous year.

The total number of appeals for disposal in the North-Western Provinces other than the High Court was slightly higher than last year, being only 579 in excess. The disposals fell from 8,192 to 7,955, leaving the pending file at 5,918 cases compared with 5,102 the year before. Of these the largest number were disposed of by Subordinate Judges and were appeals from Munsifs' decrees. The average duration of appeals in District Judges' Courts (184 days) was lower than it has been for the past three years. There was no appreciable change in the percentage of successful appeals as compared with 1898, but 32 appeals were summarily dismissed against 10 in the previous year. The number of appeals for disposal in Oudh fell from 3,033 in 1898 to 2,892. Of these 2,240 were disposed of, leaving a pending file of 652, or 182 less than the previous year. There was a considerable improvement in the average duration of appeals in District Judges' courts, the figures having fallen from 452 days in 1898 to 264 days in this year, but in Subordinate Judges' Courts there was practically no change. The percentage of interference with the decisions of lower courts remained the same as last year in Subordinate Judges' Courts, but in the District Judges' Courts there was a slight increase, the figures being 30.0 compared with 28.8 the year before.

Appeals from decrees in Kumaun remained about the same in number as last year, but there was a slight improvement both in the number of disposals and in the pending cases at the end of the year. The percentage of interference with the orders of the lower Courts has fallen from 34 to 26, an indication that the Courts are becoming better acquainted with the civil law, and with the rules of procedure which were introduced in the beginning of 1897.

The total number of applications for execution of decrees before the Courts in the North-Western Provinces was about the same as in 1897, the figure being 100,782 compared with 107,934 in 1898. The disposals

Appeals in courts subordinate to the High Court.

Execution of de-

fell from 95,209 to 89,009; but there was an improvement in the pending file: the number remaining over being 11,773, the lowest on record for several years, against 12,725 the year before. The percentage of fructuous applications disposed of has again fallen this year, the figure being 40.0 against 41.6 in 1898.

In Oudh the number of applications filed fell from 52,589 to 49,864 during the year: there was a corresponding reduction in the number of disposals (43,019), and the pending file remained almost the same as last year. There was no change in the percentage of wholly infructuous applications, but the amount realized was Rs. 70,049 more than in the previous year.

In Kumaun the applications for disposal were 2,640 against 2,708 in the previous year, and the number of cases pending at the close of the year were reduced to 306, the largest number (112) being in the Naini Tal district. The percentage of applications executed wholly or in part was somewhat better than in the previous year.

Appeals before High Courts.

In the High Court of the North-Western Provinces the total amount of work which came before the Court, including pending cases of the previous year, was practically the same as last year, there being an increase of only 30 cases. There was a slight fall both in first and second appeals, the figures being 799 and 2,356 respectively, compared with 801 and 2,422 in the year before. The disposals rose from 1,855 in 1898 to 1,994, of which 344 were first appeals and 984 second appeals, the pending file at the end of the year being 2,004, or 109 less than last year.

The result of first appeals was again more favourable to the lower Courts than in the year before, the percentage of decrees confirmed being 66.8 against 65.1 in 1898, whilst in second appeals the percentage foll from 68.1 to 66.4 during the year.

In the Court of the Judicial Commissioner of Oudh there were 2,635 cases for disposal compared with 4,506 in 1898: of these 1,885 had been instituted during the year. The absence of the Second Additional Judicial Commissioner on leave for $2\frac{1}{2}$ months when no one was appointed in his place, and a longer vacation retarded the number of disposals, which fell from 3,756 to 1,774 during the year, and the pending file stood at 861, or 111 more than the year before. There was only a slight fall in first appeals, but in second appeals the figures fell from 2,346 to 1,056. The average result was the same as last year in the case of contested first appeals, but in the case of second appeals there was a slight improvement in favour of lower Courts.

The number of appeals for hearing in the Court of the Commissioner of Kumaun fell from 112 to 86 in the year, and the percentage of rejected appeals rose from 56 0 to 69 3. Applications made to Government under rule 17 of the Kumaun rules against decisions of the Commissioner fell from 29 to 23. In 12 cases Government declined to interfere, and in 7 the order of the Commissioner was set aside on the advice of the High Court.

REGISTRATION.

There was an increase from 123,600 to 132,037 in the total number of compulsory registrations, and from 74,840 to 75,183 in the total number of optional registrations. Under optional registration, however, the increase was confined to documents relating to immovable property, and there was a decrease of almost equal amount under other registrations. The decrease was under optional registrations of documents relating to movable property, which fell from 38,032 to 35,644; this decrease was entirely in the Bareilly district, and was due to a poor sugar season. Miscellaneous transactions, of which more than half were applications for copies and searches, showed a small increase from 72,780 to 73,108. There were nine prosecutions during the year; they were mostly for false personation or false statements, but in one of them a Sub-Registrar was charged with bribery and corruption. The receipts of the Department increased from Rs. 4,09,928 to Rs. 4,26,110, and the expenditure from Rs. 2,32,824 to Rs. 2,37,086, the increase of expenditure being chiefly due to the appointment of Inspectors of Registration Offices. Owing, however, to the death of one of these Inspectors (whose place was not immediately filled up), and the illness of the other, inspections by these officers were fewer than they will be under normal circumstances. The number of offices inspected by Registrars and by Revenue officers was about the same as in the preceding year. This duty was also as a rule satisfactorily performed by Registrars (District Judges). Eight Registration sub-offices (all in Oudh), which were found to be superfluous, were closed during the year. A scheme has now been approved for reducing the offices in Oudh to the number really required, and for assimilating the system of payment of Oudh Sub-Registrars and their establishments to that in force in the North-Western Provinces.

STATE LITIGATION.

Out of 59 cases for disposal, 32 were decided in favour of the Government, seven against it, and seven were compromised or withdrawn: thirteen cases remained pending.

Of the six cases decided against the State as defendant, two were appealed (one appeal has been lost), and in one the Government was not really unsuccessful. The other three cases were not of importance. In courts of appeal the State appearing as appellant won three out of five decided cases and lost two, of which one is under second appeal in the High Court. As respondent the State appeared in 13 cases decided during the year and was successful in eight. In regard to the value of claims a much greater measure of success than in 1897-98 is shown under "Claims and appeals by the State," the percentage decreed or allowed in favour of the State being 80.6, as compared with 20.5. Under "Claims and appeals against the State," the percentage decreed in favour of the State was 98.4 in 1897-98 and 56.5 in 1898-99.

Realizations were somewhat better than in the previous year. The total sum for realization was Rs. 19,298-11-8: of this Rs. 4,315-11-8, or 22 per cent. (against 18 per cent. in 1897-98), was recovered. Of the balance, Rs. 993-11-2 were remitted, Rs. 12,132-13-2 are reported

Results of State litigation.

Realizations.

recoverable, and Rs. 1,856-5-8 doubtful. The amount expended by the State in litigation was Rs. 6,006-9-0, as against Rs. 5,416-12-11 in the previous year.

Court of Wards.

The Court of Wards won 62 cases out of 67 in which it was plaintiff, and 11 out of 21 in which it was appellant. Of suits in which the Court was defendant 42 were decided in its favour, 22 were decided adversely, seven were compromised or withdrawn. Of appeal cases in which it was respondent 29 were decided favourably and 14 adversely to the Court.

In regard to value, out of claims amounting to Rs. 1,02,608-14-8, brought by the Court of Wards and decided, Rs. 52,180-6-7, or 50 per cent., were decreed, and out of Rs. 10,69,888-10-5 claimed from it, decrees were given for Rs. 35,691-4-9, or 3 per cent. only. Out of 35 miscellaneous proceedings to which the Court of Wards was a party, 30 were decided in its favour and 4 against it (one remained pending). The realizations amounted to Rs. 42,723-5-9, or 16 per cent. of the total amount (Rs. 2,61,668-5-10) due to the Court of Wards; the percentage of realization in the previous year had been 14.

VOLUNTEERS.

The number of corps and the number of companies of active Volunteers remained the same as in the preceding year. Their numerical strength rose from 4,326 to 4,378, while that of reservists fell from 474 to 409.

The percentage of efficients to the total strength of the infantry following 74.9 to 72.2, while in the cavalry the percentage rose from 83.5 to 84.6.

The percentage in the reserve force was 79 as against 77 in the proceding year.

The funds of the corps were generally in a satisfactory condition at the close of the year, there being a total balance to their credit of Rs. 34,369-6-10.

GOVERNMENT PRESS AND BOOK DEFOT.

The receipts were Rs. 34,225 as compared with Rs. 40,746 in the previous year, the decline being due to the inclusion in the last year's figures of the abnormal item of Rs. 6,588, received from the Secretary of State for copies of the Famine Report. The expenditure was Rs. 5,40,634 as against Rs. 5,20,310; but excluding the outlay on raw materials from the central stores, the charges amounted to Rs. 2,92,685 only as compared with Rs. 2,95,646. The main economies exercised were in the charges for establishment, overtime allowances, railway freight and payments to private presses. The Press equipment was increased by some valuable new machinery.

The estimated value of the work turned out was Rs. 7,59,961, the rise being just over 1½ lakhs, and the value of the work done is estimated to have exceeded the cost of working by Rs. 1,58,754; the nominal profit to Government was 26.4 per cent.

The work generally of the Branch Press at the Naini Central Jail was economically done. The year's work was the heaviest on record, but it was carried through with despatch and efficiency. The administration of the Press is being steadily improved and careful economy is practised.

The receipts at the Book Depôt were Rs. 15,779, and its cost was Rs. 4,490. The corresponding figures for the previous year were Rs. 15,286 and Rs. 4,140.

PART I.

CHAPTER I.

PHYSICAL GEOGRAPHY.

Sketch of Meteorology.

JANUARY was remarkably free from cold weather storms, and except in South Oudh and the south-eastern districts of these Provinces, was much drier than usual. Fine clear and very dry weather with unusually low temperatures prevailed during the greater part of the month. About the usual number of depressions and cold weather storms passed over North India during February and March, but they were for the most part very feeble and gave little rain. The accompanying cloud. however, was sufficient to raise the temperature considerably above normal. In April pressure conditions favourable for easterly winds over the Gangetic plain held till the end of the third week of the month, and during that period dust and thunderstorms with moderately heavy rainfall were fairly general. The rainfall of the month was generally in moderate to considerable excess. Dry west winds appeared during the last week of the month, and held till near the end of the second week of May, when strongly marked hot weather conditions become fully established. From that date strong easterly and south-easterly winds set in over Bengal and extended well over these Provinces, giving disturbed weather and showers in most districts.

The cold weather snow-fall was on the whole less than usual, especially on the lower and middle ranges, and the temperature conditions such as usually accompany an abnormally dry winter. The skies were on the whole remarkably free from cloud, and the air was drier than usual. The air movement in March and May was more vigorous than usual—a consequence of the abnormally high temperatures of these months.

The period of the monsoon was ushered in much more quietly than usual. Rain in small amounts began to fall in most districts about 11th June, and during the next few days became gradually heavier, but nowhere so heavy as is usual on the first burst of the monsoon. By the 21st moderate rain was everywhere reported, and from then till nearly the end of July held almost without a day's break. In June no cyclonic disturbances came up over these Provinces from the Bay; in July the storms were of no great intensity, but moving for the most part over the centre of the reporting area, gave good and general rain. The season's rainfall to the end of July averaged sixty per cent. more than usual, the excess ranging from 22 per cent. of the normal fall in Kumaun to 96 in the Benares and Gorakhpur divisions.

Rain ceased almost entirely during the last week of July, and held off in most districts till 11th August, when a cyclonic storm from the Bay reached these Provinces and gave fairly general rain. Moderate to light falls continued to be reported during the greater part of the remainder of August, but with the beginning of September the rainfall practically ceased over the reporting area. The only falls after that date were a few light showers about the middle of September, which, therefore, marked the close of the monsoon rainfall in these Provinces.

The season's fall was at the end of September in slight to moderate excess in Oudh and the southern and eastern divisions of the North-Western Provinces, and in slight defect over the remainder of the reporting area.

Two feeble cold weather storms drifted eastwards over these Provinces in October and gave light to moderate rain to the north submontane and south-eastern areas. No less than six depressions passed over the country in November, but none were deep enough to give rain. December also was rainless and almost cloudless.

TEMPERATURE.

The mean temperature of the year was on the average of all roporting stations 1°·3 higher than usual and 0°·5 higher than the mean of 1898. This excess was chiefly due to the abnormally dry weather and clear skies of the last five months of the year during which the mean excess averaged 2°·8. February, March and May were also months of excessive temperature, the first two in consequence of the cloudy disturbed weather, the last in consequence of the unusual prevalence of strongly marked hot weather conditions. The only notably cool month was January, during which the provincial mean was 3°·4 lower than usual. April, June and July were each about 1° cooler than usual, the result of unusually continuous rainfall.

Of individual stations, the coolest relatively to normal was Gorakhpur, which with Benares was the only station to shew a defective mean temperature for the year. At these two stations the year's rainfall was in greater excess than at the others. The relatively hottest stations were the Rajputana stations and those on the north and west of these Provinces, where the year's rainfall was most defective.

The lowest recorded reading was 21°·3 at Chakrata on January 8th; and although at no plains stations was the freezing point reached under the shade during the cold period of January, temperatures as much as 10° below freezing were reported in the open. About this time the maximum readings on the plains and hills were from 15° to 20° below normal.

No unusually high temperatures were recorded during the hot weather of 1899. The highest in these Provinces was 114°.5 recorded at Agra on June 9th and the highest over the whole reporting area, 115°.8 at Sirsa on May 13th. Temperatures exceeding 114° were reported on only two other occasions during the year, viz, on the 13th May at Kotah (115°.6) and on the 8th June at Mainpuri (114°.2), Jhánsi was the hottest station in these Provinces with a mean temperature for the year of 82°.4, and Agra, the next, with 80°.7. Of stations outside these Provinces Kotah was the hottest with a mean annual temperature of 83°.3. The highest mean monthly maxima occurred in May of which the most notable values were 97°.3 at Jhánsi, and 95°.0 at Agra.

PRESSURE.

The mean pressure of the year was practically normal on the average of the whole reporting area. Pressure was in slight relative excess at the Rajputana stations and on the hills, and in slight relative defect in the Gangetic plain. On the hills pressure was in excess almost continuously throughout the year, the greatest excesses being in September, October and November. On the plains, also, pressure was in considerable excess during these three months, the excess being especially marked at the Rajputana stations. Pressure was lowest relatively to normal in February, when the mean defect from normal over the reporting area was '046". The mean pressure during the other months did not differ markedly from normal. The highest pressures were recorded in January, when the provincial mean was 50'082" and the lowest in July when it was 29.512".

The chief feature of the pressure distribution during the early days of June was the abnormal excess in North-Western and Western India, which checked the advance of the monsoon winds over the West Coast. In the Bay, conditions were more favourable, and by the 12th or 13th the monsoon may be said to have become established over these Provinces, although as noted above it was difficult to fix the precise date of its arrival. June was entirely free from cyclonic storms, but a large shallow land formed depression appeared over these Provinces

about the end of the month, and brought general and in places heavy rain to the reporting area. Three depressions appeared over these Provinces in July; two of them were land formed and the third came up from the Bay. Although none of them were deep, they brought good and practically continuous rain to the reporting area, so that by the end of the month a break was urgently required to enable field work to be done. Only one storm came up from the Bay over these Provinces during August, but its effect on the weather of the reporting area was slight. The last storm of the monsoon period to reach these Provinces moved inland near Gopalpore on September 11th. It was near Jabalpur on the 13th and recurving, as the storms at the end of the rains usually do, was central near Cawnpore on the 14th, and during the next forty-eight hours it continued to recurve and passed successively over Benares and Gya, and by the 17th had practically disappeared. This storm gave much-needed and fairly-well distributed rainfall to nearly all districts of the reporting area. With this storm the monsoon rainfall ended in these Provinces.

The cold weather began early, and two cold weather storms passed over these Provinces in October, giving some rain to several districts. November was much more disturbed and December less disturbed than usual.

RAINFALL

The mean totals for the year were in defect in the Kumaun, Meerut, Agra and Rohilkhand divisions. The defect was absolutely greatest (16.93 inches) in Kumaun, and greatest relatively to normal in the Meerut division, where only a little over one-third the normal year's total was received. The defects in the Kumaun, Agra and Rohilkhand divisions averaged 24 per cent. of normal. In all the other divisions, except Lucknow, which was normal, more or less considerable excesses were received. The year's falls were most excessive in the Benares and Gorakhpur divisions, where the excesses were respectively 16 and 10 inches, i.e., about 37 and 25 per cent. respectively, of the normal falls. The mean year's excesses in the Fyzabad and Allahabad divisions averaged about 10 per cent. The rainfall of the first five months was normal or in slight defect. June and July were months of excessive rainfall in all but the Meerut division, where the fall in July was in defect. June was much more rainy than July in the Upper Doab and in the submontane district, while the reverse was the case in Oudh and the south-east of these Provinces. The rainfall in August was defective in all but the Gorakhpur division. In all divisions the remaining months of the year were much drier than usual.

The year's rainfall was throughout moderate in character. Falls exceeding six inches in twenty-four hours were rare. Consequently serious flooding was nowhere reported.

PART II.

CHAPTER I.

PHYSICAL AND POLITICAL GEOGRAPHY.

- 1.—PHYSICAL FEATURES OF THE NORTH-WESTERN PROVINCES AND OUDH.
 - 2.—CHIEF STAPLES OF THE NORTH-WESTERN PROVINCES AND OUDH.
 - 3.—HISTORICAL SUMMARY.
 - 4.—FORM OF ADMINISTRATION.
- 5.—CHARACTER OF LAND TENURE—SYSTEM OF SURVEY AND SETTLEMENT.
 - 6.—CIVIL DIVISIONS OF BRITISH TERRITORY.

[For the above standard sections, see pages 5—48 of Report for the year ending 1st March 1893.]

7.—CHANGES IN THE ADMINISTRATION.

[See General Summary.]

8.—RELATIONS WITH TRIBUTARY STATES AND FRONTIER AFFAIRS.

In last year's report it was stated that orders had issued directing that the levying of any dues by Thibetan officials whether as land revenue or trade tax within British territory should be strictly prohibited; but that no interference was to be made with the collection of trade dues within their own territory or on the frontier, and that British officials were to be allowed as a matter of courtesy to collect trade dues in British territory for the benefit of the Jongpen, where these were payable by established custom.

In September 1899 the Deputy Commissioner of Almora reported that the Thibetans had again been endeavouring to collect dues within British territory, that the Bhotiyas having refused to agree to these claims, the Thibetans had closed the passes in retaliation. On receipt of a further report stating that the Bhotiyas were willing to pay the dues demanded by the Thibetans, and that it was difficult to distinguish between payment made by the Bhotiyas as trade dues and as land revenue, orders were issued, observing that there was no doubt that the dues collected for the Thibetans by Government officials were paid from the profits of trade, and that it was with a view to prevent the stoppage of their trade that the Bhotiyas were willing to pay them.

CHAPTER II.

ADMINISTRATION OF THE LAND.

I.—Survey and Settlement.

North-Western Provinces and Oudh.

A BRIEF account is given below of the progress made in the revision of the land revenue demand and the correction of land records as part of the

operations in districts which have come under regular settlement.

The revision of settlements in the greater part of Oudh is now over. The final settlement reports of the Lucknow, Unao and Partábgarh districts were submitted last year, and those of Rae Bareli, Sítapur, Hardoi, Sultánpur and Bara Banki during the year under report. The settlements of all these districts have been confirmed by Government with the exception of that of Hardoi, in which district it has been found necessary to revise the assessments. A special officer has been deputed for this purpose. The final settlement report of Fyzabad was not received until after the close of the year. In Gonda settlement operations were commenced after the close of the year.

In the North-Western Provinces settlement operations were brought to a close in Budaun, in the greater part of Bijnor and in the Lalitpur Sub-division of the Jhansi district. The settlements of Bijnor and Lalitpur have been confirmed. The submission of the final report on the settlement of the Budaun district is awaited.

Meerut.—The work of attestation was completed for the whole district at the end of last cold weather, and the fairing of records was expected to be finished by March 1900. The rent-rate reports of parganas Loni, Kithor, Hastinapur, Barnawa and Jalalabad were received and sanctioned during the year. These parganas were also assessed besides parganas Hapur, Dasna and Sardhana. All the assessments were sanctioned during the year with the exception of those of parganas Jalalabad, Barnawa and Kithor, which were sanctioned after the close of the year. The work of distributing the revised demands was heavy; but by far the greater part of it was finished before the close of the year. The revised assessments of parganas Hapur, Dasna, Sardhana, Loni and Hastinapur have been declared and will yield an increase of Rs. 1,75,173, or 25.72 per cent on the expiring demand. The expenditure during the year amounted to Rs. 7,792-6-5, and the total cost from the commencement of the operations amounted to Rs. 1,90,274-0-6, or Rs. 83-2-0 per square mile.

Barcilly.—The survey records for the whole district, with the exception of some 389 villages of tahsil Baheri, have been received from the Survey Office. The city, cantonment and that part of the civil lines which is not included in any mauza were not surveyed with the rest of the Barcilly tahsil. The survey of the civil lines has been completed for the benefit of the Municipality, and the survey of the city has been commenced by the Survey Department on a scale of 32" to the mile. The attestation work of tahsil Barcilly was completed in 90 villages of tahsil Nawabganj and in the whole of tahsils Mirganj and Aonla, excepting alluvial villages. It is expected that the rest of the Nawabganj tahsil and the whole of Baheri will be completed before the end of June 1900. The fairing work of pargana Faridpur was also completed. The rent-rate report of this pargana was received and sanctioned in August. The whole of this pargana and the greater portion of pargana Barcilly; covering an area of 444 square miles, were inspected during the year. The assessment report of pargana Faridpur has

been submitted to the Board of Revenue. The expenditure during the year under report was Rs. 42,742-1-7, and the total cost amounted to Rs. 52,736-14-7, or Rs. 41-10-0 per square mile.

Bijnor.—The final report on the settlement of 11 parganas of this district was submitted in September last and the orders of Government have been passed thereon. Pargana hand-books have been prepared for eight of the eleven parganas. For the remaining three, viz. parganas Najíbabad, Afzalgarh and Barhapura, they will be prepared after the assessment of the forest maháls. The rest of the district, comprising the four parganas of Nagína, Chándpur, Bashta and Burhpur, was surveyed during the year by professional agency. The records prepared by the surveyor were attested by the Deputy Collector deputed for the work. The fairing of the records was approaching completion at the close of the year. The assessment of these parganas will not be commenced until 1901 A.D., when a special officer will be appointed for the work. The charges for the year amounted to Rs. 13,500-10-8, and the total expenditure, including that on the eleven parganas, came to Rs. 2,33,379-14-2, or Rs. 124-14-5 per square mile.

Shahjahanpur.—The assessments of tahsils Shahjahanpur and Jalalabad were reported and sanctioned during the year. The Settlement Officer inspected and assessed tahsil Pawayan, comprising an area of 598 square miles, during the year. The rent-rate report of this tahsil was sanctioned by the Board in June last. The cost of settlement operations during the year was Rs. 63,396-3-0 and the total cost came to Rs. 1,19,381-15-11, or Rs. 68-14-2 per square mile.

Lalitpur.—The only portion of this sub-division which remained to be assessed was an area of 162 square miles in pargana Bánpur. Orders were passed on the assessment reports of this pargana and parganas Mahroni and Maraura during the year. The revised assessments of parganas Talbehat, Lalitpur, Bánpur, Mahroni and Maraura were also declared. The result of the revision of assessments in these five parganas was an increase of Rs. 10,473, or 6.52 per cent on the expiring demand. The total expenditure up to the end of the year, including Rs. 19,986-15-4 incurred during the year, amounted to Rs. 95,386, or Rs. 52-10-3 per square mile.

Almora.—The district was brought under settlement in pursuance of Government Notification No. $\frac{3616}{1-29C}$, dated the 17th November 1898, and Mr. J. E. Goudge, Deputy Commissioner of Almora, was placed in charge of the settlement work. He assessed pargana Shor, the current assessment of which expired with the year under report. Besides preparing the papers of 418 villages in pargana Shor, statistical forms for 2,091 villages in parganas Kali Kumaun, Gangoli, Sira and Askot were prepared. In pargana Kali Kumaun the amins have also submitted returns of new cultivation. The expenditure from the commencement of operations has been Rs. 5,842-8-6, or Rs. 233-11-3 per square mile. It has, however, recently been decided that all new cultivation shall be surveyed and a record-of-rights be prepared for the whole of the Almora district now under sottlement. Rules for the survey and settlement have been prepared by the Board.

Sitapur.—As stated above, the settlement of this district has been completed; the only work which remained to be done at the close of the year was the declaration and distribution of the assessments of the alluvial villages, which have received a long-term settlement under the revised rules.

Kheri.—Of the 17 parganas in this district, three, viz., Aurangabad, Pasgawan and Kasta Abgoon, had been inspected and assessed in the previous year. The revised assessments of these parganas were declared during the year and resulted in an increase of Rs. 28,666, or 21.15 per cent on the former revenue. The revenues in these parganas were distributed and the under-proprietary rents fixed during the year under report. Seven parganas, viz. Atwa Piparia, Magdapur, Haiderabad, Muhamdi, Paila, Kheri and Srinagar, covering an area of 854 square

miles, were inspected and assessed during the year and the assessments sanctioned by Government. The revision of the knewats of the whole district was completed during the year. The charges for the year amounted to Rs. 37,163-5-5, and the total expenditure up to the close of the year to Rs. 59,551-11-8, or Rs. 23-5-8 per square mile.

Bahraich.—The inspection and assessment of the district was completed during the year. The area inspected was 856 square miles (besides some permanently settled villages), and the area assessed was 1,077 square miles. The new assessments of parganas Ikauna, Fakhrpur and Nánpára were declared during the year. They show an increase of Rs. 1,25,400, or 30.58 per cent. in the revenue demand of the parganas. The assessments of parganas Nánpára and Fakhrpur were sanctioned by Government during the year, and those of the remaining parganas have been sanctioned since the close of the year. The work which remains to be done is the decision of underproprietary suits, declaration of assessments in three parganas, preparation of the final report, pargana hand-books and other necessary records. The charges incurred during the year were Rs. 34,592-7-5. The total cost from the commencement of settlement operations has been Rs. 94,482-8-10, which falls at the rate of Rs. 40-13-0 per square mile.

The usual abstract statements are appended.

MAPPING.

Village field maps.

The Survey of India Office, Calcutta, which continues to reproduce the village field maps of districts cadastrally surveyed, dealt with and reproduced during the year under report the 117 sheets of the Garhwâl district which remained unfinished at the close of the previous year: 116 were photozincographed and 1 zincographed. Thus of the 9,100 sheets representing 4,452 villages of this district which had been professionally surveyed, 7,273 sheets have been photozincographed and 1,827 zincographed.

(2) AND (3)—STATE PROPERTIES AND WASTE LANDS.

North-Western Provinces and Oudh.

There were 403 estates paying a revenue of Rs. 1,38,354 in the possession of Government at the commencement of the year. During the year 14 estates, with a revenue of Rs. 2,706 were acquired, which brought up the total number of Stateproperties to 417 with a revenue of Rs. 1,41,060. The most important of these are the special State properties in the Kumaun Division and the Dudhi estatein the south of Mirzapur. The other districts in which Government owns properties with a rental demand of over Rs. 10,000 are Allahabad, Bánda, Jhansi, Lucknow and Kheri. The total current rental demand amounted to Rs. 8,39,191 as compared with Rs. 8,11,575 in the preceding year, being an increase of nearly Rs. 28,000. This increase is mainly due to the rise under sanction of the Board of some Rs. 34,000 in the rentroll of the Tarai Government Estates. Including arrears, the total demand came to Rs. 9,32,101, of which Rs. 8,22,135 (or 83 per cent) were collected. If, however, the Kumaun estates, in which the rental was collected practically in full, are excluded, 69 per cent. of the demand was realized as against 63 per cent. in the previous year. The bulk of the demand had to be collected in the Allahabad and Lucknow Divisions, where the famine of 1896-97 was worst: and considering the condition of these tracts, the results were on the whole as satisfactory as could be expected. The outstanding balance at the

close of the year was Rs. 1,09,966, of which Rs. 13,053 are classed as doubtful, Rs. 5,198 as nominal, and Rs. 13,392 as irrecoverable. Of the amount classed as nominal Rs. 2,421 are on account of rent of fallow lands in Bánda, and Rs. 2,547 relate to the property of the late of Nawáb Anisuddaula in the Lucknow district, which, in accordance with the orders of Government, was released during the year. After payment of land revenue and rates, the income was Rs. 6,25,242, of which Rs. 3,72,550 were spent on establishment, contingencies and improvements, leaving a net profit to Government of Rs. 2,52,692 as compared with Rs. 2,13,342 in the preceding year.

In the Banda district only 57 per cent. of the total demand could be collected. This is an improvement on the 41 per cent. collected in the previous year, but was not so good as might have been anticipated, considering the relief which was given in the shape of remissions to the extent of Rs. 29,550. The Commissioner is of opinion that the management has not been sufficiently energetic, and has called the attention of the Collector to the matter. The Collector will also have the balances finally tested on the spot, and will submit a further report regarding them.

The management of the Holagarh and Khargapur escheated estates in the Allahabad district was on the whole, fairly satisfactory. In Holagarh 72 per cent. of the total demand was collected while in Khargapur, where the outstanding balances were large, not more than 66 per cent. could be recovered. The percentage of collections to the current demand was indeed over 90, but nearly a third was credited to arrears. The outstanding balances are still very large, and a detailed examination of them has been ordered with a view to determining what items should be kept on the books as really recoverable. The estate generally appears to be very sensitive to the vicissitudes of the seasons, more particularly the villages bordering on the Ramgarh jhil, which suffer from flooding in years of excessive rainfall. A scheme to protect these lands from inundation is under consideration. The expenditure under the main heads was as follows:—

						D.S.
Establishment	•••	***	**1	***	***	68,331
Contingencies	•••	•••		***	,	1,01,157
Improvements	•••	***	***			2,03,061
				Total		3,72,549

The bulk of this amount was, as usual, spent in the large estates in the Naini Tal district, excluding which the cost of establishment was only 8 per cent. of the receipts. The expenditure on improvements shows a decrease of Rs. 9,574 as compared with the figures of the preceding year. As usual most of the expenditure under this head was in the Kumaun estates. The small expenditure on improvements in the Oudh estates has again been noticed by the Board.

In the Holagarh and Khargapur estates no advances were made to tenants. The Board have expressed their agreement with the Commissioner that it should be made the duty of the Special Manager to represent the needs of the tenants of these estates as regards taqávi advances, and he has been asked to issue instructions to this effect. Liberal advances might have been made with advantage in Jhánsi and in many of the Oudh districts.

The outstanding balances were again heaviest in the districts of Binda (Rs. 12,673), Mirzapur (Rs. 17,167) and Naini Til (Rs. 19,771). Efforts will be made to reduce them, but it is feared that a considerable sum will ultimately have to be written off as irrecoverable.

The total demand, inclusive of outstandings, for the price of confiscated, escheated and waste lands was Rs. 26,360, but this, as mentioned in previous reports, includes a sum which is payable in instalments of Rs. 5,000 per annum. The demand actually recoverable within the year was Rs. 6,360, of which Rs. 6,276 were collected.

4.—Court of Wards.

North-Western Provinces and Oudh.

The number of estates under the management of the Court of Wards, which had progressively increased from 148 at the close of the year ending 30th September 1894 to 194 at the end of September 1898, fell to 190, twelve estates with an aggregate rentroll of Rs. 2,17,076 having been released and eight estates with a rental of Rs. 1,41,489 taken under management. Altogether 202 estates were under management for the whole or a part of the year as against 207 in the previous year.

The following table shows the distribution of the estates in the various divisions of the Provinces:—

, ,			Estates with rental.						
Div	rision.	· 	Exceeding one lakh	Over Rs. 50,000	Over Rs. 10,000,	Over Rs 1,000	Undor Rs. 1,000.	Total.	
Meerut Agra Bohilkhand Allahabad Benares Gorakhpur Kumaun Lucknow Fyzabad	Total		1 1 2 1 3 8	2 5 2	56 77 87 74 4 3 12 8	6 4 27 11 8 8 1 14 6	5 4 3 8 1 1 2	19 15 39 27 15 8 6 85 26	

The rental of the estates under management amounted to 74½ lakhs of rupees. To this sum the Balrampur estate, which has been released since the close of the year, contributed nearly 20 lakhs. Of the remaining 54½ lakhs of rental the Oudh estates accounted for considerably more than half. Including Balrampur not far short of three-fourths of the total Court of Wards rental was collected in Oudh. The revenue paid by the Court of Wards estates was nearly 32 lakhs-over 5 per cent. of the entire Provincial revenue. The most considerable estate released from management in the course of the year was the Bhur estate, in Kheri, with a rentroll of over a lakh and a quarter. During three years' management the rental had increased by Rs. 30,000, in consequence chiefly of over 10,000 acres of new land being brought under cultivation, a debt of Rs. 1,24,526 was paid off, and the estate handed over to its proprietors free of any encumbrance. The Haldaur estate, in Bijnor, remained five years under the management of the Court. During this period the rental rose by about Rs. 1,000, debts of Rs. 25,000 were cleared off, improvements costing nearly Rs. 9,000 were effected, and a substantial cash balance was made over to the ward on his attaining majority. In Hari Singh's estate, in the Bareilly district, all debts were paid off, the area of the estates increased, and considerable improvements, including the construction of a large protective embankment, were effected. The other estates released, with one exception, were very small, but in all of them debts were either cleared off or largely reduced before circumstances necessitated their relinquishment.

The most important of the eight estates which came under the control of the Court during the year was Kashipur, in the Naini Tal district, with a rental of Rs. 71,500. It is the property of the Kashipur family, its late owner, Raja Hariraj Singh, having died in September 1898, leaving two minor sons. The estate is encumbered with a debt of Rs. 2,12,231, but the gross income is nearly Rs. 85,000, and the Government demand for land revenue and cesses only Rs. 29,028, the greater part of the villages being revenue-free. In the Gorakhpur district a portion of the well known Bettiah estate of Lower Bengal was taken under management. Its gross income is Rs. 38,738, and the debt due in these

Provinces amounts to Rs. 14,861. The surplus profits of this estate will be transferred to the Lower Provinces Court of Wards. Of the remaining six estates, which were all very small, three belonged to minors, one to a lunatic, one to a person disqualified on his own application, and one to a female declared incompetent to manage her estate.

The total area of the estates under management fell from 3,264,211 acres in 1897-98 to 3,201,864 acres in the year under review. The decrease was attributable to the release of the large Bhur estate in Kheri, and to the handing over of 100 villages of the Murarman estate in Rae Bareli to the Rána of Khajurgaon in usufructuary possession. In the North-Western Provinces the area of the estates increased from 970,052 acres to 1,091,463, and the area of the Balrampur estate also rose slightly. The collections of rents showed an appreciable advance from 74 to 78 per cent., and the percentage of the revenue demand to the rental collected remained 42 per cent., as in the preceding year. This low percentage was due to the inclusion of the Balrampur estate, which is permanently settled, the incidence of its revenue to rental being only 33 per cent. But, after making allowance for this, the returns exemplify, on the whole, the moderation of the Government demand. The current rent demand from all the estates under management was $74\frac{1}{2}$ lakks in round numbers. In estates with rentals aggregating 62 lakhs the Government demand fell below 45 per cent. of the rental. In the balance of the estates it fell at 50 per cent. But this balance contains estates in which, through mismanagement of the owners, agriculture has deteriorated, and the rental suffered. Orders have therefore been given that in these estates the demand should be reduced until the assets again rise to a sum sufficient to support the assessment without difficulty.

Thirteen estates exhibited a considerable increase in the rental demand. In the Balrámpur (Rs. 97,881) and Bhadri (Rs. 30,373) estates this was due to the extension of the property by large purchases. In other cases, in all of which the increase was less than Rs. 9,000, it was attributable to various causes, such as the enhancement of rent consequent upon a revision of settlement, the breaking up of fallow land, the resumption of leased villages, and the redemption of villages from mortgage.

Nine estates showed a decrease in their rentroll. The most marked instances—Singha Chanda (Rs. 50,670) and Rámnagar (Rs. 42,640)—were due to the sale of land to the Balrámpur estate, in order to reduce debt. The low range of prices during the greater part of the year had the effect of lowering the income of the estates where grain rents are common, e.g. Oel (Kheri), Katesar, Parsehri, (Sítapur,) and the Kirat Singh estate in Moradabad. These estates should, in the current year, show large increases of rental. In the Anapur estate the falling off was partly attributed to diluvion.

The full rental demand, current and arrears, of all estates amounted to Rs. 91,74,627, of which Rs. 71,79,155 were collected, leaving a balance of Rs. 19,95,472, as compared with Rs. 24,45,446 in the previous year. The current demand of the year was Rs. 74,53,710, arrears of previous years standing at Rs. 17,83,462. The collection of current arrears showed a distinct improvement. It had risen in Agra from 69 to 97 per cent; in Rohilkhand from 79 to 83; in Benares from 67 to 78; in Lucknow from 83 to 90; in Fyzabad from 87 to 93; in Balrampur from 94 to 96. This improvement is satisfactory, for the year was not an exceptionally good one, and low prices made the collection of rental difficult in many estates. But the collection of arrears has been least satisfactory in the Benares Division, in which over a lakh remained outstanding at the close of the year, Rs. 55,388 being due from the Dube estate in Jaunpur. The collection of arrears has been, on the whole, poor, particularly in the Kumaun; Lucknow, and

Rohilkhand Divisions. The total outstanding of the year was close on 20 lakhs, a sum 4½ lakhs lower than in the previous year, the balance of the Lucknow Division alone being Rs. 5,16,681. It was only in the Agra Division and in the Balrámpur estate that the collections had reached the standard which efficient management should ensure. In the latter estate they have been excellent, and the Board's commendation of the management has been noted with approval by the Lieutenant-Governor and Chief Commissioner. Taking the figures ás a whole, the Lieutenant-Governor, while noting the improvement in the collections of the current demand, cannot deem them altogether satisfactory. In well managed and fairly rented estates arrears should not, as a rule, exceed 5 per cent of the demand. Judged by this standard, the collections in the Benares, Gorakhpur, Kumaur, Rohilkhand, and Allahabad Divisions, where the arrears on the current demand amount to 22, 20, 17, 17, and 13 per cent., respectively, must be deemed inadequate and unsatisfactory.

The cost of management amounted to Rs. 7,09,418, compared with Rs. 6,28,317 in the preceding year, the incidence on income having risen from 6 to 7 per cent. In view of the remarks recorded last year, the Lieutenant-Governor cannot regard this increase as altogether satisfactory. It is explained by the Board as being due to the expenses connected with the new system of audit, and to a correction of the system of accounts, by which certain miscellaneous charges, which had hithortobeen erroneously excluded from the cost of management, have been included. His Honor is not prepared to definitely commit himself to the view expressed by the Board that the present charge is as low as it can be kept consistently with efficient administration. He anticipates that the introduction of the new scheme, creating a regular Court of Wards service, composed of permanent Government officials temporarily transferred from the ranks of Deputy Collectors and Tahsildars, will tend to reduce the cost of management. The withdrawal of the immense Balrampur estate, which is managed with an incidence of only 4.3 per cent., will, however, considerably raise the Provincial incidence of future years.

The Local Fund audit establishment, which examines accounts of all estates with a normal income of over Rs. 10,000, has dealt with the accounts of 57 estates, only 28 estates remaining which await audit, with the exception of Balrámpur, where the audit was not completed when the year under review closed. The accounts of nearly all the larger estates have been audited, and in some cases, notably in the Anapur estate in Gházipur, the results have been most beneficial in bringing to light errors and irregularities in the management.

The scheme for substituting village headmen and selected tenants for low paid menials has not as yet made much progress, but is being gradually and cautiously introduced. In the Meerut district tenants were said to be disinclined to give help, and to demand inordinately high wages. In Jalaun and Gházipur the litigious and quarrelsome character of the tenantry was said to bar the success of the system. The opening of a register for each estate, recording the services porformed by, and the concessions granted to, the selected tenants, as started in the Gonda district, appears a sensible measure. It may be conceded that in small and scattered properties the scheme will not be effectively worked; but in the larger estates the Lieutenant-Governor considers that the grant of land on favourable terms, or the allotment of plots of land with permission to plant groves, would enable the Court of Wards to enlist the services of men of local influence, the old and substantial tenants, with good results.

The special scheme of management was in force in sixteen districts and in the Balrampur estate. Only seven of these districts were in the North-Western Provinces. The percentage of the cost of management on the income ranged from 4.3. in Balrampur and 4.4 in the rest of the Gonda district to 8.4 in Bahraich and 9.02.

in Gházipur. Generally speaking, the larger the estate the more cheaply it can be managed, and it may be laid down that in the most extensive properties the cost of management should rarely exceed 6 per cent of the income.

The education of wards has received due attention, and the Board have noticed with approval the benefits which the Colvin School at Lucknow confers on the wards attending it. It is satisfactory to note that the Board have for the first time been able to chronicle appreciable results in the encouragement of primary education. The progress in Bálrampur, where 59 schools with a total attendance of 2,696 boys are now open, is gratifying. In the Kheri district, and in the Bhinga, Bhadri (Partábgarh), and Khapradih estates, good work in this direction has been done. Much, however, remains to be done, particularly in the North-Western Provinces, where the relative smallness and the indebtedness of the majority of the estates can hardly be accepted as a justification for the very poor results achieved.

One of the most unsatisfactory features of the year's administration was the small expenditure on improvements in the North-Western Provinces. This fell from Rs. 68,055 in 1896-97 to Rs. 50,133 in 1897-98, and the year under review showed a further fall to Rs. 28,902. The Board have drawn attention to the fact that the estates in the North-Western Provinces are largely composed of small shares in villages, which are not susceptible of improvement, and to the fact that they are indebted to the extent of nearly five times their gross rental. Even after making due allowance for this, the expenditure was extremely small, and it appears from the detailed analysis made by the Board that the budget allotment has in several cases either been inadequate or has not been worked up to. The Board have been directed to invite the attention of Commissioners to this matter, and to commend to them the plan, adopted with satisfactory results in one division, of calling on managers to submit quarterly returns, showing the expenditure on improvements. In Oudh the expenditure exceeded that of the previous year by Rs. 949, the total outlay being Rs. 1,23,430. In Balrampur the expenditure, Rs. 1,41,310, remained practically stationary.

In the North-Western Provinces improvements generally took the form of constructing and repairing wells, but in Oudh works of a more varied character were carried out. In the latter Province the plan of sinking wells through the agency of respectable tenants was extended, over 150 wells being sunk with good results. The extension of well sinking by tenants deserves every encouragement: good work is, as a rule, ensured, and the complaints made-too often with good reason—that the money spent by the Court of Wards on improvements is wasted, are prevented. An interesting note has been prepared by the Director of Land Records and Agriculture, summarizing the attempts at agricultural improvements. A number of experiments have been made with improved varieties of seed, but the results, except in the case of Muzaffarnagar wheat, which was tried in Partabgarh, Kheri, and Ghazipur, do not appear likely to be of any practical utility. No success has attended the attempts to introduce improved agricultural implements. The model ploughs were not approved, and the water lifts were too heavy. Little progress, too, has been made in stock breeding, and the attempt to introduce mule breeding has met with poor results. Agricultural banks in the Majhauli estate in Gorakhpur and in Balrampur have been worked successfully and have proved of great advantage to the tenantry.

Village sanitation and vaccination received considerable attention. Seventy-two thousand seven hundred and eighty-three vaccination operations were performed on Court of Wards estates, and over 87 per cent proved successful. The number of villages in the Balrámpur estate to which special sanitary rules apply has been increased from 440 to 590.

An additional hospital was built by the Balrampur estate. A dispensary has been completed at Majhauli, and is doing good work among the tenants.

The amounts advanced to tenants in the form of taqavi advances fell considerably during the year, as the following figures show:—

Year.			Amount.
			${f R}$ s.
1894-95	 		 $75,\!284$
1895-96	 		 94,159
1896-97	 	116	 4,38,243
1897-98	 		 86,288
1898-99	 •••	•	 57,548

More than half of this was distributed in the Balrampur estate. The year was a favourable one, and aid on a large scale was not required. Taqavi recoveries amounted to Rs. 93,250, the amount outstanding at the end of the year being: Rs. 1,69,083. It is anticipated by the Board that this will probably be cleared off in a year or two, but this view seems somewhat sanguine.

The disbursements during the year in liquidation of debts amounted to Rs. 41,07,35S, over 11 lakhs of debt being paid off from the profits of the year, the residue by the sale of property and the contraction of fresh debts at easier rates of interest. The total obligations of the estates under management, including debts incurred since management was assumed, amounted to nearly 410 lakhs. Of this amount, 120\frac{3}{4} lakhs have been paid off, and 120 lakhs transferred to other creditors on more favourable terms. The actual reduction of debts on the properties now under management is represented by the difference between the original and the existing debts. This exact sum is Rs. 16,34,353. The heavy debts due on the Singha Chanda and Rámnagar estates have been largely reduced, mainly by the sale of part of the property. The most embarrassed estates were Oel, Murarmau, and Sardhana, with liabilities of 18\frac{3}{4}, 13 and 12 lakhs respectively. The affairs of the last named estate have formed the subject of a special reference to the Government of India. Surplus funds to the extent of over 19 lakhs have been invested on behalf of solvent estates in landed property and in loans to other estates.

There has been a very pronounced 'decrease in the number of notices of ejectment issued, the number falling from 1,165 to 776 and the area affected from 111,314 to 37,138 acres. Only 16 per cent of the notices issued were contested, and only 5 per cent successfully. There were nine estates in which applications for enhancement of rent were made. Out of 109 applications, 73 were made in the Unao district alone, previous local inquiries by the Deputy Commissioner having proved the inadequacy of the existing rents. The rate per acre was raised from Rs. 3-15-9 to Rs. 4-13-11.

The Lieutenant-Governor has previously expressed the interest which he takes in Court of Wards affairs, and his appreciation of the benefits which the system is capable of conferring upon both the proprietors and tenants. The new Court of Wards Act, which has become law, will, in His Honor's opinion, tend greatly to the successful and efficient working of the department, and further practical advantages are contemplated from the introduction of the special scheme already referred to...

CHAPTER III.

PROTECTION.

I.—LEGISLATING AUTHORITY.

THE Legislative Council met five times on the following dates:-

At Lucknow on 6th April 1899 and 25th July 1899; at Naini Tal on 27th September 1899; and at Lucknow on 22nd November 1899 and 20th December 1899.

II.—Course of Legislation.

Five bills were dealt with during the year, viz.:-

- (1) the North-Western Provinces and Oudh Court of Wards Bill.
- (2) the North-Western Provinces and Oudh Municipalities Bill.
- (3) the Oudh Settled Estates Bill.
- (4) the North-Western Provinces and Oudh Land Revenue Bill.
- (5) the Oudh Rent Act, 1886, Amendment Bill.

The first two passed into law and are respectively Acts No. III of 1899 and No. I of 1900. The other three were new Bills introduced during the year and were under the consideration of Select Committees at the close of the year.

Act No. III of 1899 (the North-Western Provinces and Oudh Court of Wards Act) consolidates and amends the law relating to the Court of Wards in the North-Western Provinces and Oudh. The law on the subject had for many years been admitted to be defective in many respects and in some instances obscure. This Act was passed with a view to rendering the law on the subject more effective, precise and clear.

Act No. I of 1900 (the North-Western Provinces and Oudh Municipalities Act) was originally introduced into the Council in 1898 merely as a measure supplementary to the Acts then in force. It was recognised that the existing Acts were in many cases defective, and this measure was introduced with the object of removing certain of the more serious defects the existence of which had given rise to practical inconvenience in the actual administration of Municipalities. The disadvantages of a merely supplementary measure, however, came into great prominence when the Bill was examined in Select Committee. The Committee therefore decided to present to the Council a consolidating measure in which the new legislation proposed was incorporated with the provisions of the existing Acts.

POLICE.

The total volume of reported crime showed an increase of 2 per cent. on the figures of the year before, the numbers rising from 181,708 cases in 1898 to 185,613 cases in 1899. The figures for 1898 indicated a condition of things that was something better than normal; and the year 1899 shows no material retrogression. There were only two other years (1892 and 1893) in the decade in which the volume of reported crime was smaller; and the present figures are well under the decennial average. Including 1,074 cases pending at the beginning of the year, and 1,715 cases taken up by station officers otherwise than upon report, the total number of cognizable cases which came to the notice of the Magistracy or the police was 188,402. Magistrates either on complaint or of their own initiative took.

up 15,952 of these cases; and 172,450 were reported to, or taken up by, police officers. The figures for 1898 were 17,175 and 167,708 respectively, showing that in 1899 the police took a somewhat larger share in the institution and investigation of cases of cognizable crime. Excluding 417 cases pending from the previous year, there were 15,535 Magistrates' cases for disposal. Preliminary investigations under section 202, Criminal Procedure Code, resulted in the dismissal of nearly half this number (7,539); and 1,950 cases only were referred to the police for enquiry. The percentage of complaint cases in which Magistrates required a police investigation showed a further decrease from 13.5 in 1898 to 12.5 in 1899. Of the number thus investigated last year, rather more than a third (622) came into court, resulting in 297 convictions and 325 acquittals or discharges. The percentage of convictions increased from 43 in 1898 to 47 in 1899.

The number of cases investigated fell from 135,515 in 1897 to 90,529 in 1898, and was 90,430 in 1899. The total number of cases reported (excluding cases taken up suo motu by station officers) during these years was 256,759, 164,966, and 170,078. The percentages of cases investigated at once on report were 51,53, and 52 respectively: the figures of 1897 were admittedly abnormal, and the tendency of the percentage of investigations ordinarily to decrease is attributed to the continued operation of the orders forbidding enquiry into petty thefts and burglaries without loss, in which no investigation is desired by the complainant. These orders have probably resulted in a certain falsification of the burglary and theft returns, due mainly to the wish of persons reporting to avoid investigation; but any statistical inaccuracies which they may have occasioned are not to be weighed against the administrative advantage of not forcing on the people police enquiries which they do not want. The investigations made by the police had the following result. When the year closed, 981 cases were under enquiry, and 8,070 cases were, from one cause or another, not forwarded to court. In 54,853 cases, or 60 per cent. of those investigated, the accused were sent before the Magistrate, and in 26,526 cases, or 29 per cent., no clue was obtained or no arrests were made. In 82.020 cases, or 48 per cent. of the total cognizable crime dealt with by the police, enquiries were refused, the percentage last year being 46. Of this number, however, no less than 80,444 were cases of house-breaking, house-trespass, or theft, into which the orders referred to above no doubt prohibited enquiry. Out of the 8,070 cases which the police did not send to the courts, the Magistracy saw cause to send for 813, out of which 622, or 77 per cent., resulted in the conviction of the accused.

Despite the increase in reported crime above noticed, the total volume (56,285 cases) of case work (together with cases pending in courts at the beginning of the year) sent by the police before Magistrates was somewhat lighter than in 1898 (57,574 cases); and of the number disposed of, 45,579, or 89 per cent., ended in convictions, as compared with 88 per cent. last year. The proportion of success in courts indicates that discrimination was shown by the police is sending cases for trial, though, as noticed below, the same discrimination was not exercised in regard to the persons sent for trial. In many instances the cases were true, but some persons were wrongfully accused.

The increase of 3,905 cases which occurred in 1899 in the total volume of cognizable crime was mainly under the heading of serious offences against person and property or property only. This increase is attributed partly to burglaries due to high prices of food in a portion of the Provinces, and partly to increased reporting by the public under this class. Offences under major offences against the person have for some years steadily increased; returns for the present year are the highest on record; the increase being mainly under the head of serious hurt. The explanation suggested is that better reporting has been induced by the courts granting liberal permission to compound such cases, so that the injured person often regards his complaint merely as a means of recovering compensation. It is to be remembered that the agricultural conditions of the year were much

less favourable than in 1898; and, in view of the scarcity which threatened a portion of the Province, the crime return, as a whole, is lighter than might have been anticipated, being still much below that of the years preceding 1898.

A comparison of the results of cognizable cases decided in 1899 with those of the two preceding years is made in the table below:—

Year.		Magist cas			P oli	ice cases.	Total cases.			
		Decided. Convicted.		Decided	Con- victed.	Percentage of— Cases con- Persons victed to convicted cases in- to persons vestigated. arrested.		Decided.	Con• victed.	Percentage of convections.
									 -	
1897	***	6,342	3,605	84,453	75,741	56	86	90,795	79,346	87
1898	***	6,184	3 ,615	54,657	48,237	52	:83	60,841	51,852	85
1899	***	б,834 ′	3,097	52,585	46,201	50	81	58,419	49,2 98	84

The returns of non-cognizable crime (with which the police have little concern, unless the case be referred to them for investigation) showed an increase of 18 per cent., the figures rising from 78,688 in 1898 to 84,162 in 1899, though the past four years had shown a continuous decrease. The increase occurs mainly under the heads of offences against municipal bye-laws and voluntarily causing hurt. Including 1,331 pending cases, there were 85,493 cases for disposal, of which 29,495 were dismissed by Magistrates without trial. The figures in 1898 were 79,713 and 32,091 respectively. Of the cases decided, 13,436 ended in acquittals or discharges and 21,529 resulted in convictions, the percentage of convictions (61.6) agreeing closely with that of the preceding year (61.3). A larger number of cases (18,852) were compounded than in 1898 (14,539). The total number of persons against whom processes issued increased from 81,255 to 91,073. The number of non-

cognizable cases which the police were required to investigate continues steadily to diminish, as marginally noted, and the decrease may be taken as evidence of increasing care on the part of the Magistrates in themselves holding preliminary enquiries. Of the 636 cases thus referred to the police in 1899, 231 fell under the Opium and

Excise Acts, and 204 were cases of taking security under section 106, Criminal Procedure Code.

From an administrative standpoint the most important feature of the year was the outbreak of *dakāiti* which occurred in certain districts. True cases of this crime increased from 358 in 1898 to 405 in 1899, and professional cases, in which

firearms were used, increased from 117 to 125. The districts with the highest return of cases are marginally shown: in Jhánsi, Moradabad, Kumaun and Bijnor the increase from previous years' figures is very marked. The statistics of convictions point to less successful police work in dealing with this crime. Arrests were made in 229 cases; and

the percentage of cases convicted to cases reported was 28.8, and of cases convicted to cases disposed of, 61.7. In 1898 the figures were 30.2 and 62.8. Success was least in respect of armed gang dakāitis, of which only 19 per cent. were worked out to a conviction. For this failure in detection the districts of Agra, Jhansi and Kumaun are mainly responsible. In Agra especially prevention and detective work alike were bad. In spite of the fact that early in the year two dakāit leaders of notoriety—Gobardhan, Kachhi, and Ghi Ram—were brought to justice, the Agra police proved unequal to the task of breaking up the gangs who continued

General of the Circle failed to help the local officers or put them on the right track, and it was reserved for the officers of the Thagi and Dakaiti Department to capture Mohan, Kachhi, the remaining leader of repute, and thereby to furnish the Agra police (it is hoped) with the means of exterminating the gangs. In Jhansi, the police were equally unsuccessful, as out of 16 armed dakaitis not a single conviction was secured. This general failure, however, was, to some extent, redeemed by the good work of individual officers, of which the exemplary conduct of Messrs. Goad and Richardson in capturing the Karar Khera gang was a conspicuous instance. In Moradabad the prevalence of dakaiti is attributed in some measure to the large number of licensed arms in the district—a matter which has recently been noticed by Government in reviewing the Arms Act reports. A satisfactory feature in 1899 is the number of instances in which villagers turned out to defend their property. As a rule, though isolated instances to the contrary are quoted, co-operation on the part of Native States' police was good.

The most important figures in regard to classes of heinous crime (other than dukāiti) are compared with the returns of 1898 in the table below:—

			Cases for including	disposal, arrears.	Cases disposed of.		Convictions.		Percentage of convictions to disposal.

Mischief to cattle	•		588	516	415	339	327	260	79	77

Convictions improved in the cases of murder, grievous hurt, kidnapping, and coining, but were less numerous in regard to the offences of homicide, rioting, robbery and cattle mischief. The figures for poisoning are small.

Murder was one of the offences in which the proportion of increase was

Hardoi ... 24 Sitapur ... 19 greatest. In the marginally shown districts;

Mornal-bad ... 22 Meernt ... 19 in particular, the number of murders was high.

Ratelly ... 21 Carnpore ... 18 In Cawnpore and Barcilly, however, every

Aligarh 17 case was brought successfully to a conviction.

Twenty-four cases occurred of the murder by women of their children.

Rioting cases also increased in the year under review; the number of true cases reported rose from 725 in 1898 to 791 in 1899. The cases of 5,946 persons were disposed of, and 3,883 of these were convicted. Azamgarh (49), Budaun (49), Allahaba'l (46), Gorakhpur (38), Moradabad (34), Meerut (33), Kheri (31), and Farukhabad (30) are the districts reporting the largest number of cases.

A larger number of cases of harbouring were reported during the year, and resulted in 41 convictions and the punishment of 55 persons, as compared with 5 convictions in 1898, involving the punishment of 9 persons.

Coining cases increased slightly in 1899, and, as a rule, were successfully worked out. It is noted that this class of crime is extending, and that greater efforts to check it are necessary. The matter is engaging the attention of Government.

In cattle theft cases a further decrease occurred; the number of true cases reported was 8,579 in 1897, 4,286 in 1898 and 3,654 in 1899. The percentage of convictions in cases disposed of fell from 83 to 77. The total number of cattle sales registered at private markets increased during the year from 929,484 to 963,425, while registrations at police stations declined. The number of cases of cattle theft in which detection was ascribed to the registration system was 74 only.

Four thousand four hundred and fifty-five persons were proceeded against under the operation of the bad livelihood sections of the Criminal Procedure Code during the year, compared with 3,990 in 1898; of these the prosecution of 419 only, as compared with that of 655 in the preceding year, was ordered by Magistrates.

The average money security for good behaviour demanded rose from Rs. 212 to Rs. 230, and 86 per cent. of the persons required to furnish security were unable to do so. The corresponding percentage in 1898 was 81. This high rate in the security ordinarily demanded is engaging the attention of Government. The average period of imprisonment inflicted in default varied from 20 months in the Allahabad Division to nine months in Naini Tal. For the whole Province the average period rose from 11 months in 1898 to 15 months in 1899. Judging from the number of persons proceeded against who had been previously convicted, or who were already registered as bad characters, the police of the Benares, Lucknow and Rohilkhand Divisions showed a better discrimination than those of other divisions in using the preventive sections of the Criminal Procedure Code. The total percentage of persons prosecuted who were already registered was 22 in 1899 for the whole Province, as compared with 16 in 1898. The lowness of this proportion indicates that in many districts no proper use is made of the register of bad characters. The object with which this register was started was to bring under surveillance suspected bad characters and to prosecute them if that suspicion

was found correct, and, if not, to remove them within a reasonable time. The districts noted marginally, however, showed a creditable activity in the use of the bad livelihood sections. Cawnpore, Banda, Muttra and Agra are districts in which the police paid little attention to these sections, and in the case of the first three districts a

similar neglect was noticed last year.

A statistical comparison of the work in the various divisions is made in the table below, for the purposes of which the usual test percentages have been applied:—

Division.		Percentage of cases convicted to reported.	Percentage of cases convicted to disposed of.	Percentage of persons convicted to those whose cases were disposed of,	Test percentage.
Meerut Agra Rohilkhaud Allababad Becares Gorakhpur		32 7 85 8 38 0 36 8 37 2 35 9	81°3 78°2 81°3 84°0 83°0 84°1	73°5 67°3 70°3 76°7 74°0 73°7	57 6 57 0 59 6 60 4 60 1 60 0
North-Western Provinces		30.2	81.9	72'9	59 5
Lucknow Fyzabad	• • • • • • • • • • • • • • • • • • • •	31·6 34·8	82·2 86 3	72·2 78·6	. 56 ⁹ 9 60 5
Oudh	•••	33 2	64 2	75.4	58.7
Kumaun Government Railway Police	•••	46.7 30 0	81·0 85·0	75·0 82·6	63.8 57.5
Total:	101	85:1	82 ა	73.9	68,8

According to this table, the Oudh Divisions, which, on the whole, show better results in court than those of the North-Western Provinces, are credited with a smaller resultant percentage of success, because a smaller proportion of reported cases comes into court.

In 1898 the North-Western Provinces, with 22 chaukidars and constables per 10,000 inhabitants, reported 38 crimes per 10,000; in 1899 39 crimes per 10,000 were reported. In Oudh the number of crimes reported remained unchanged at 42.

			•

Gorakhpur. Agra, Bijnor, Budaun, Cawnpore, Kheri, Muzaffarnagar and Aligarh are districts in which it is believed that some concealment of crime occurs.

The register of time-expired convicts contained, at the end of 1898, 37,995 names; 10,302 names were struck off during the year, and 7,546 added; there remained 35,339 names upon the register at the close of 1899. Although in the past two years the number of registered names has decreased by some 4,000, it is alleged that under existing rules there is a constant tendency for the list to increase; a proposal has been made to make registration dependent, not upon a crime classification, as at present, but on the amount of sentence awarded by the courts.

Twenty-seven thousand four hundred and thirty-five persons were convicted in respect of offences for which the register of previous convictions is maintained, as compared with 30,289 in 1898, the percentage (17·7) of cases in which provious convictions were proved against them being the same as in 1898. The identification of offenders by the finger impression system was regularly started from 1st July 1899, and promises results superior to those of the anthropometrical method, with which it is for the present necessarily worked side by side. The percentage of success in searches under both systems rose from 12·5 in 1898 to 14·93 in 1899.

The number of absconded offenders upon the registers rose from 2,567 to 2,615 during the year. Gorakhpur, Gházipur, Basti, Azamgarh and Meerut districts did well in effecting arrests; but several districts are quoted in which the matter has been comparatively neglected by the police. In particular, there seems to have been apathy in making arrests in all the districts of the Allahabad Division, and most of the districts in Oudh.

The sanctioned strength of the Provincial District Police during the year 1899 was 24,568—a decrease from various causes of 222 men. Their cost, however, increased from Rs. 55,68,598 in 1898 to Rs. 55,84,566 in 1899. The strength of the armed reserve increased from 7,279 to 7,518. The total strength of the town police encolled under Act XX of 1856, was 3,215 in 1898 and 3,212 in 1899. Their total cost increased from Rs. 2,04,366 to Rs. 2,07,299. Municipal police numbered 6,595 at a cost of Rs. 5,05,430, as compared with 6,685, costing Rs. 5,07,926 in 1898. The strength of the Railway Police was augmented from 818 to 889 men, and their total cost amounted to Rs. 2,82,766. The estimated expenditure of the whole department for the financial year was Rs. 81,61,860, while actual expenditure during the calendar year under report fell Rs. 2,30,902 short of this.

The total number of village police decreased by 1,563. There were 61,415 chaukidárs in the North-Western Provinces and 26,979 in Oudh, as compared with 61,168 and 28,789 respectively in the previous year. The total cost of the village police of the provinces rose from Rs. 28,97,123 in 1898 to Rs. 30,34,236. This increase is mainly in Oudh, where fair progress was made during the year with the scheme for substituting cash wages, paid in most cases through Government, for remuneration by jagirs held from the zamindárs.

Rewards were given to 6,849 police officers in 1899, as compared with 5,991 in 1898, and the amount paid increased from Rs. 49,249 to Rs. 51,541.

The punishment roll of the year showed an increase. There were 8 charges of torture, of which 3 ended in conviction and 5 in acquittal. Excluding cases of judicial punishment, the total number of penalties inflicted on members of the district police rose from 936 to 984. Fines and suspensions were more sparingly resorted to, while dismissals increased from 248 to 290. The increase is mainly due to the large number of dismissals which it was necessary to make in the Jhansi district in connection with the cowardice shown at the encounter with the Karar Khera dakaits.

The total number of punishments inflicted on the rural police were fewer than for the past five years: there was an increase in the number of suspensions, but all other forms of punishment were rarer.

Various departmental questions of importance engaged the attention of Government during the year. A scheme for the reorganization of the Railway Police and the redistribution of the grades therein, so as to correspond with those of the District Police, was submitted for the approval of the Government of India. Rules providing for a better system of co-operation between the Railway and District branches of the police were considered: a reallocation of the mounted police was carried out: and more recently the Government have agreed to consider proposals sketched by the Inspector-General for the revision of the rules for the Police Training School, to which it largely looks for the supply of investigating officers. The Training School is about to be removed from Allahabad, where the students were exposed to temptations to idleness, to Moradabad, where such temptations will not exist in such force; and a proposal is now under consideration to strengthen the teaching staff of the school.

CRIMINAL TRIBES.

The following is the usual table, summarizing the chief figures relating to the tribes proclaimed under the Act:—

Name of tribe-	: District.	Number of villages.	Number of persons originally registered.	Number on register at beginning - of year.	Number struck off from all causes.	Number added.	Resultant population at end of year.
Sanauriahs	Jhánsi (Lalitpur)	21	154	232	2	11	241
Barwárs	Gonda	45	4,219	3,803	83	116	3,836
Sansiahs }	Various districts (set- tled with zamin- dárs).	88	664	95	9	3	89
1	Kheri (settled in the; colony).	1	Б96	146	8	17	155
	Total	100	5,633	4,276	102	147	4,321

The number of Sanauriahs engaged in cultivation, which was shown as only 28 in the previous year, is now shown as 119, in consequence of the Government's direction that all men who live as members of a family engaged in cultivation should be included. Twenty Sanauriahs are shown as having absconded, but of these seven returned of their own accord after an absence of a few days. One Sanauriah only was convicted under the Indian Penal Code. There was an appreciable increase (from 227 to 284 bighas) in the area under cultivation, and three of the men have recently been employed as chaukidars.

The number of registered Barwars shows an increase from 3,803 to 3,836, due to excess of births over deaths. The number of villages was reduced from 47 to 45

by the Deputy Collector in charge inducing certain Barwars to move from villages where they had no land. At the close of the year 177 Barwars were in jail, and 557 were absent and absconding (some who are still thus recorded have no doubt died). The amount of land actually under cultivation has increased, but, though there was no retrogression in the year, the reclamation of the Barwars does not perceptibly advance.

During the year the Government sanctioned, for three years, an allotment of Rs. 200 to the Deputy Commissioner of Gonda for the purpose of supplying bullooks and making advances for seed to Barwárs in need of assistance. The number of cattle in the Barwárs' possession increased from 1,287 to 1,377.

The number of registered Sansiahs settled with zamindárs in various districts is now 89 only: twenty-eight being in the Muzaffarnagar district.

The number of Sansiahs settled in the colony in the Kheri district rose from 146 to 155 during the year. The crops were good and the colonists behaved well; but the Commissioner does not think that they will ever willingly settle permanently in Kheri.

A considerable number (1,472) of Doms in the Gorakhpur district, though not proclaimed under the Criminal Tribes Act, are under police surveillance, which is no doubt useful in keeping the Doms from crime, but the advance, if any, towards the reclamation of the tribe is very slow. The settlement of Haburahs (159 in number) also under surveillance, at Newada, in the Moradabad district, is well reported on and there was no crime.

EUNUCHS.

The figures for registered eunuchs in the North-Western Provinces and Oudh for the year under report were as shown in the annexed table :—

		Рготіпсев.			Number originally registered.	Number on register at beginning of year.	Number added during the year.	Number struck off during the year.	Resultant number registered at end of year.
North-W	Vestern	Provinces	***	***	1,096	288	6	20	274
Oadh	***	247	.75	101	298	195	4	17	182
			Total	•••	1,394	483	10	37	456

The total number on the register had decreased in the preceding year from 525 to 483, and there is a further decrease to 456 in the present year. The largest numbers of eunuchs are in Aligarh (19), Agra (20), Cawnpore (28), Ballia (28), Gorakhpur (19), Rae Bareli (26), Hardoi (24), Bahraich (34), and Bara Banki (29). The names of 29 eunuchs who died were removed from the roll, and 2 others are said to have permanently left the Provinces. Most of the eunuchs are now very old and decrepit, and, as a rule, they subsist chiefly by begging.

There were three prosecutions during the year; the two cases in which ennuchs were convicted were not serious ones. No case of emasculation was reported during the year. The registers appear to have been properly maintained in all districts, except Pilibhit, where the attention of the District Superintendent of Police has been required to the matter. With regard to the arrivals and removals of ennuchs, it is said that the reporting and recording is generally efficient, but, as the eunuchs often give false destinations and change their names, care is needed, and instructions have been issued on the subject to all districts.

In nearly all the districts inspections, both of registered and unregistered ennuchs, were regularly made. In the Meerut district the police have under surveillance certain men who dress up as women and dance in public, and who apparently sometimes pretend to be eunuchs. On the whole, there is no reason to doubt that the provisions of the Act were satisfactorily administered during 1899 in these Provinces.

4.—CRIMINAL JUSTICE.

North-Western Provinces.

A.—Returns of Crime.

THE number of Sessions Divisions was the same as in the previous year, i.e., 20.

The Additional Subordinate Judge at Gházipur exercised the powers of an Assistant Sessions Judge in the Gházipur division from the 1st of January to the 1st of March 1899. The Sessions Judge of Benares was deputed as an Additional Sessions Judge to dispose of a dakáiti case at Gházipur. The Additional Sessions Judge of Moradabad was in charge of the Sessions Judge's office in addition to his own duties as an Additional Sessions Judge from the 30th January to the 12th of March while the Sessions Judge was on special duty in Allahabad.

The following statement compares the returns for the last four years showing for the Provinces the number of offences reported, the number of cases returned as true, and the number of cases brought to trial:—

				Offences reported.	Cases returned as true.	Cases brought to trial.
1896	***	***	•••	145,029	116,287	103,451
1897	•••		•••	145,663	120,061	108,229
1898	***	***	• • •	124,072	97,326	88,906
1899	***	***	•••	125,751	99,063	89,806

The following districts again show less than 60 per cent. of trials on offences reported:—

		Per cent.				.7	Per cent.		
Garhwál		***	44	- 1	Bijnor	***		59	
Etah	***	***	57	ı	Budaun	•••	•••	59	

The percentage for all districts of cases returned as true on offences reported, as compared with the year previous, has slightly increased from 78.4 in 1898, to 78.7 in 1899.

The total number of complaints dismissed under section 203 of the Code of Criminal Procedure fell slightly from 25,559 to 25,435, giving a percentage of 20.2 on offences reported as compared with 20.6 for the preceding year. The number of cases struck off as false increased from 1,187 to 1,253.

The provincial percentage of cases brought to trial on offences reported is 71.4 as against 71.6 in 1898.

The fluctuations in the numbers of cases brought to trial in 1898 and 1899 are exhibited in the following table under the different heads:—

Increase.			Cases.	Decrease.		Cases.
State	144		10	Army and Navy	•••	2
Public tranquility	***	***	60	Public servants	***	14
Coin and stamps	***	***	12	Contempts	***	318
Public health	***	***	681	False evidence	***	53
Miscarriage		***	32	Weights and measures	•••	46
Hurt	***	***	1,201	Religion	***	27
Criminal force and assault	, ,,,		275	Life	110	85
Rape			12	Wrongful restraint	***	85
Unnatural offence		•••	64	Kidnapping		59
Robbery and dakáiti	***		75	Theft		1,098
Criminal breach of trust	***	•••	31	Extortion	***	18
Cheating	•••	46.	13	Criminal misappropriation		27
Mischief	•••	***	78	Receiving stolen property	***	261
Offences relating to docum	ents	•••	8	Fraudulent deeds	100	2
Defamation	-44		8	Criminal trespass	***	250
Criminal intimidation	***	, • 1 4	18	Criminal breach of contracts of serv	ice	25
Code of Criminal Proced	ure and	special		Marriage	***	64
and local laws	***	***	711	1		

The most notable increases are in hurt and public health cases, while cases of contempt show a large decrease. The increase in public health cases is most marked

in Basti and Azamgarh. In the former district it is attributed to measures being taken to secure proper sanitation in large villages and towns. These precautions were found necessary owing to the plague showing itself in quarters not far from that district. In Agra and Saharanpur the decrease in contempts is ascribed to the fact that in 1898 there were a large number of prosecutions for disobedience to orders for the enforcement of sanitation.

The numbers of persons brought to trial and of those convicted during the last two years are as follow:—

			Brought to trial.	Convicted.	Convicted under the Pougl Code.
1898	440	***	 140,035	79,270	40,102
1899		114	 147,464	80,528	89,782

Of the 147,464 persons brought to trial, 42,917 or 29 per cent. were prosecuted for theft and hurt. The figure is the same as in the previous year. Separate figures for each of these offences, and the corresponding figures for 1898, are as follow:—

					Persons	concerned.
					f f	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
					1898,	1899.
Theft	•	444		+++	15,175	13,946
Hurt		***	***	•••	25,375	28,971

There was thus a decrease of 1,229 persons concerned in theft and an increase of 3,596 in hurt.

The percentages of persons convicted to persons tried for each of these offences during the last two years have been as follow:—

```
Theft ... ... ... 1898. 1899. Hurt ... ... ... ... 22.9 21.0
```

The following table compares the numbers of persons convicted under the Indian Penal Code in 1898, and 1899, by classes of offences:—

(a) Chapters VI and VIII . II . Co			1898.	1899.
(a) Chapters VI and VII: the State, the army and navy (b) Chapter VIII: public tranquillity	***	***	9	20
(a) Chapters IX and X: public servants	***	***	3,329	3,705
(d) Chapter XI: public justice and false evidence	***	***	2,593	2,128
(e) Chapters XII and XIII: coin, stamps, weights and men	***	***	1,233	1,216
(f) Do. XIV and XV: public health, &c., and religion	sures	***	231	198
(9) Cuapter & VI: homan hada	•••	***	1,327	2,661
(h) Do. XVII: property	***	***	8,897	9,167
(i) Chapters XVIII to XXII: miscellaneous	***	111	22, 00 7	20,158
выправления вы		***	476	520

- (a). There is an increase of 20 under this head. Bulandshahr shows 28 out of the 29 convictions under Chapter VI.
- (b). Twenty districts again out of thirty-six show increases in the numbers of persons convicted of offences against public tranquillity. The increases are most marked in Etah, Aligarh, Gházipur, Azamgarh, Gorakhpur, Hamírpur, Bareilly, Budaun, Bijnor and Meerut. On the other hand Bulandshahr, Sháhjahánpur, Muttra, Agra, Farukhabad, Mainpuri, and Basti show large decreases under this head.
- (c). "Public Servants."—Twenty-one districts show increases under this head. The districts mainly responsible for the decline in the number of convictions are Saharanpur, from 557 to 59, and Agra from 372 to 65. Of the 21 districts showing increases the most notable are Bareilly, Etah, Basti, Muzaffarnagar and Gorakhpur.
- (f). "Public health and religion: Chapters XIV and XV."—Twenty districts show increases in convictions of offences under this head. The most remarkable are:—Basti from 176 to 899, Azamgarh from 67 to 672, and Etah from 15 to 164. Farukhabad has fallen from 305 in 1898, to 92 in 1899, and Moradabad from 87 to 45. The variation in other districts is nominal.

- (g). Chapter XVI.—Twenty districts show slightly increased convictions. The variations are inconsiderable.
- (h). Chapter XVII.—In twenty-five of the thirty-six districts there were decreases in convictions under this chapter. The most noticeable are in Azamgarh, Allahabad, Benares, Basti, Moradabad, Aligarh, Farukhabad and Mirzapur. Gorakhpur shows an increase of 296 convictions under this head.

Details of persons concerned in proceedings under special and local laws and the Code of Criminal Procedure and convicted or subjected to an order thereunder are given in the following table for the years 1898, and 1899:—

			·	189	8.	182	9.
				Concerned.	Convicted.	Concerned.	Convicted.

		Totel	***	58,781	42,19 2	61,834	46,900

Under the Police Act convictions were most numerous in Benares (1,847), Allahabad (1,296), Agra (934), Cawnpore (801), and Bareilly (676).

Under the Municipal Acts the following districts show the largest numbers of convictions:—Gorakhpur (940), Allahabad (851), Benares (836), Muzaffarnagar (579), Cawnpore (539), Moradabad (528), Bareilly (458), and Agra (455). The principal fluctuations in the numbers of convictions under these acts are in Gorakhpur, Bulandshahr, Farukhabad, Muttra, and Cawnpore, which show increases of 363, 225, 162, 158 and 151 respectively, and in Allahabad and Benares, which show decreases of 162 and 111 respectively.

Proceedings under section 250 of Act No. V of 1898, declined from 888 in 1898, to 791 in 1899. There were very few cases under this section in the following districts:—Garhwal (3), Almora (5), Muttra and Fatehpur (7 each), Dehra Dun (8), Etah and Farukhabad (9 each), and Mirzapur (10). The only notable increase in these cases was in Banda from 27 to 48: Shahjahanpur has fallen from 45 to 22, Mainpuri from 42 to 23, and Benares from 41 to 24.

Of persons called on to show cause against being bound over to keep the peace 42.7 per cent. as against 56.8 in 1898 were ordered to find security.

Of persons called on to show cause against being bound over to be of good behaviour, 83 per cent. were so bound over.

Business coming before the Criminal Courts of Original Jurisdiction, I.—Courts of Magistrates.

The number of cases disposed of by the several classes of Magistrates' courts during the years 1897—99 was as follows:—

	200,.	T -00.	2000.
Renches of Magistrates (section 15)	17,387	18,866	18,354
Unpaid Special Magistrate (section 14)	2,385	1,712	2,021
Stipendiary Special Magistrates (section 14)	3,911	3,788	4,971
Other Stipendiary Magistrates including	83,690	63,310	63,060
District Magistrates (section 12).			•

1899.

There was an increase in the number of summary convictions in 1899, thus:-

Year.		Stipendiary Magistrates.	District Magistrates.	Benches.
1898	5	8,528	514	9,090
1899	***	8,923	562	9,166

The following table exhibits the result of trials for the last three years as affecting persons:—

Year.		Number of persons under trial,	Number convicted.	Remaining under trial.	Peresutage of convictions.
1897	***	. 162,651	99,131	2,031	61.8
1898	***	135,900	76,802	2,592	57 · 6
1899		148,070	77,882	2,436	5 5·4

The list of districts in which the number of persons under trial at the close of the year exceeded 100 is as follows:—

Allahabad	***		217	Gorakhpur	916.1	•••	15ó
Moradabad	144	•••	170	Aligarh	1 t T		128
Meerut	• • • •		162	Ballia	•••	***	121

The average duration of trials was 7.8 days as compared with 7.4 in the preceding year. The following districts show durations in excess of the provincial average:—

Moradabad		144	14	days.	Bijnor		•••	9	days.
Farnk baba	d	404	10	ır	Aligarh	•••		9	-
Pilibhít	•••	***	10	>7	Allahabad		111	9	
Bánda	***	***	10	1)	Farukhabas		100	ง	15
Sháhjahán	pur	***	10	33	Mirzapur		•••	Ð	17
Budann	•••	***	9	,,	Fatehpur	***	ered.	9); (d
Ballia	110	100	9	25	· .				,,

The highest percentage 69 of convictions was in Benares and the lowest 41 in Budaun.

Similar percentages in the cases of offences against property and offences affecting the human body are as follow:—

		Against property.		
Jølann	•••	71 Bædøun	***	 37
		Affecting the human body.		 •
Etah	***	48] Phikaie		

Particulars regarding witnesses in Magistrates' courts are as follow:-

Number attending				1898.	1899.
Number examined	***	***	***	321,162	327,061
Number paid	***	Ite	***	290,410	294,754
Amount paid	***	***	•••	79,790	79,633
paid	***	1-4		Rs. 43.328	Ru 46 961

The percentage of witnesses paid fell from 24-8 in 1898, to 24-3 in 1899. The average payment was higher than in the previous year, being 9 annas and 5 pies, against 8 annas and 8 pies.

The following Benches of Magistrates disposed of large numbers of cases during the year:—

Benares			€a	Number of see disposed of.	Number of persons whose cases were
		*74	2.50	2,541	disposed of.
Allahabad	***	***			3,147

The number of cases disposed of by District Magistrates was 1,179 as compared with 1,166 in the preceding year and 1,074 in 1897.

II.—Courts of Session.

Cases tried by Sessions Judges were as follow:-

			Cases	Cases	Cases	Average.
Year.			for trial.	disposed of.	left pending.	duration.
1898	 ***	•••	2,283	2,054	204	40
1899	 		2.387	2,133	247	37

Cases in which the trial abated and cases transferred to another province have not been included in the number of cases for trial and of cases disposed of. The districts showing conspicuous increases are:—Etah from 54 to 109, Bijnor from 38 to 74, and Azamgarh from 79 to 109; the largest decreases were in Allahabad from 147 to 96, Basti from 104 to 74, and Gorakhpur from 173 to 147.

There is a decrease in the number of persons under trial and convicted. The figures for the last four years are as follow:—

Year.		P e	rsons under trial.	Persons convicted.	Persons left under trial.	persons convicted on persons whose cases were disposed of.
1896	714	***	5,047	2,770	833	6G
1897			6,588	4,142	473	68
1898	•••	***	4,126	2,4 66	400	67
1899	•••	•••	4,392	2,644	521	69

Jury trials.—There were 114 cases affecting 163 persons. As to 158 of these the verdicts were approved by the presiding Judge; and in the cases of five persons reference was made to the High Court; in all of which the verdicts of the jury were set aside.

There were 1,715 trials with the aid of assessors as compared with 1,849 trials in 1898. The number of persons so tried was 3,357: as regards 2,318 the presiding Judge agreed with all the assessors: as to 443 he differed from one or more of the assessors; and differed from all the assessors in the cases of 596.

Particulars of the witnesses in Courts of Session are as follow:-

			1897.	1898.	1899.
Number attending	414	***	33,027	22,070	22,023
Number examined	•••	***	21,717	15,669	15,843
Number paid		***	23,680	16,413	16,095
Amount paid	•••		Rs. 21,624	Rs, 17,691	Rs. 18,202

The percentage of witnesses paid was 74.4 as compared with 74.3 in the preceding year. The average payment to each witness was Re. 1-2-1 as against Re. 1-1-2 in 1898.

Sixty-six per cent, of witnesses in attendance were discharged on the first day. The percentage is higher than that of last year.

The percentage of witnesses examined on witnesses attending rose from 71 to 72. The majority of the witnesses discharged without examination were defence witnesses who were withdrawn at the time of trial.

III.—HIGH COURT.

There were two cases for trial during the year, one having remained pending from the previous year. The number of persons concerned was two, both of whom were convicted.

Of 16 witnesses summoned 9 were examined. The average amount paid to each witness was Rs. 40-14-3 as against Rs. 18-12-3 in 1898.

The following statement gives particulars of the trials of European British subjects:—

Eighty-one offenders were released under the provisions of section 31, Act No. VIII of 1897, while 404 persons were released on probation under the provisions of section 562 of Act No. V of 1898. Proceedings under section 563 were taken against 18 convicted offenders released under section 562 upon probation for good conduct, of whom 17 persons were convicted. The number of persons shown as dealt with under section 562 of the Code of Criminal Procedure in 1898 was 65: this figure represents the persons dealt with only for a part of the year in 1898, as the Act only came into force on the 1st of July of that year.

The following table compares the average lengths of imprisonments in 1898 and 1899:—

	Fifteen days and under.	Six months and under.			Abovo soven years
Courts of Magistrates	{ 1898 3,004 1899 2,929	10,741 10,313	9,052 9,007	98 126	2
Courts of Session		146 1 53	467 439	1,203 1,327	255 234

There was a further decrease from 1,773 in 1898 to 1,479 in 1899 in the number of cases referred under sections 347 and 349 of the Code of Criminal Procedure.

The number of simple imprisonments declined from 1,311 in 1898, to 1,200 in 1899. The percentage of simple imprisonments on all imprisonments was 5.5 percent, the corresponding figure for the previous year being 5.9 percent.

The sentences of whipping may be thus classified :-

				1898.	1899.
In lieu of other punishment	£11	-4-	411	5,915	5,020
In addition to other punishmen		•••	***	4 36	503
On juveniles for offences not a whipping.	ordinarily	punishable	with	108	112
On first conviction	•••	***	***	б,756	4,900
Percentage	•••	•••	***	89-1	87
On subsequent conviction	***	***		703	735
Percentage	1+*	•••	,,,,	10.9	13
77					
For theft	***	***	4 94	4,225	3,558
For receiving stolen property	407	***	•••	59 5	544
For house-trespass and house-b	reaking	***	***	1,512	1,409
10 -1-1					
10 stripes and under	***	***	*	2,189	1,811
20 ditto	***	•••	***	8,094	2,850
30 ditto		•••	***	1,176	974

Whipping was inflicted in 30.67 per cent. of possible cases. The corresponding percentage for 1898 was 30.66, and in 1897 the percentage was 38.46.

Details of punishments of fine are as follow:-

		P	ersons fined.	Percentage on convictions.	Amount imposed.	Realized.	Percentage realized.
					Rs.	Rs.	
1897	•••	***	47,667	46-1	2,67,136	2,15,558	80∙6
1898	•••	***	49,074	60-6	2,83,417	2,40,090	84.7
1899	***	r#1	51,443	63.9	3,02,931	2,46,516	81.4

The percentage of fines realized in Courts of Session was 41 as against 83 percent. in the previous year, whilst in Magistrates' courts the percentage of realizations fell from 84.7 per cent. to 83.6 per cent. in 1899.

Compensation awarded by Magistrates under section 545 of the Code of Criminal Procedure amounted to 10.8 per cent. of the fines realized, as against 11.8 per cent. in 1898.

In Bareilly, Sháhjahánpur, Mainpuri, Cawnpore, and Azamgarh there were considerable increases in the amounts awarded under section 545, as compared with the previous year. Bulandshahr, Naini Tal, Moradabad, Gorakhpur, and Ballia show a large falling off in this respect.

D.—Appeal, Reference, and Revision. I.—Courts of Magistrates. (A).—Appeals.

The total number of reported offences showed an increase of 445 only (or 1.5 per cent.) over the figures of the preceding year (which had been the bwest for many years). The increase occurred under the head of offences against special and local laws. Whether the latter class of offences be included or excluded, the districts

Lucknow City.
Sitapur,
Unao.

Kheri.
Hardoi.
Fyzabad.

which show an increase upon an figures of 1898 are the seven marginally not corted offences were most numerous in vzabad (4,793), Lucknow city (4,719), and Sitapur

(4,214); and least frequent in Lucknow district (1,935), Kheri (2,371), and Rae Bareli (2,521).

Offences under the Penal Code decreased from 28,840 in 1898 to 28,7 in 1899. Offences against property fell from 11,917 in 1898 to 11,128 in 1899: the decrease extending to all offences under Chapter XVII of the Penal Code except criminal misappropriation, criminal breach of trust, cheating and mischief, under which heads a slight increase occurred. Other forms of offences under the Penal Code which decreased were offences relating to marriage, offences affecting life and offences against public justice. There was a considerable increase, shared by all districts without exception, (686) under the heading of hurt, and smaller increases in the offences of criminal force (75) and intimidation (40).

The increase under the heading of special laws was mainly due to the number of breaches of municipal bye-laws, which rose from 4,667 in 1898 to 5,448 in 1899. Cases of nuisances (under section 34, Act V of 1861) also increased from 2,734 to 2,824.

Excluding 11,524 cases struck off or dismissed after preliminary investigation, 32,104 cases, involving 51,980 persons, were brought to trial during the year by the Criminal Courts of Oudh. Of these, 31,495 cases, or 97.82 per cent., involving 50,849 persons, were disposed of, leaving 609 pending. Of the persons whose cases were brought to trial, 6,573 or 12.9 per cent. were discharged, 17,192 or 33.8 were

acquitted, and 26,916 or 52.9 per cent. were convicted; the percentages in the preceding year were 13.0, 32.0, and 54.6, respectively. The percentage of convictions (which in 1897 was 59.7) thus shows a further decline; but the falling off is for the most part confined to the less serious offences, and convictions in respect of the graver charges have generally improved. The fact that, while the percentage of convictions by Magistrates has fallen from 54.6 to 52.5, the percentage of convictions in Courts of Session has risen from 62.6 to 68.6 confirms the same conclusion. In the Sultanpur district the proportion of convictions (17.5 per cent.) in the Courts of Tahsildár Magistrates was particularly low.

The unpaid tribunals continued to render valuable assistance to the district judicial staff. Honorary Magistrates sitting singly or in benches disposed of 8,034 cases, or about one-fourth of the total number of Magistrates' cases. Chaudhri Mahendra Singh, district Unao, Pandit Janki Prasad, district Bara Banki, and Rája Partáb Bahádur Singh, district Sultánpur, singly disposed of 337, 287 and 202 cases respectively during the year. Deputy Commissioners dealt with 669 cases in all in 1899, as compared with 533 in the previous year. The Magistrates of Fyzabad and Bara Banki appear to have made no use of their powers under section 34, Act V of 1898.

Criminal litigation in Magistrates' Courts continued to be disposed of with despatch, the average duration of cases for the whole province falling slightly from 7.5 to 7.4 days. The duration was lowest in the Lucknow City Courts (3.8 days), and highest in the Courts of the Unao district (10.2 days). The total number of punishments awarded by all Magistrates was 27,973, as compared with 28,222 in 1898. The only increase occurred under the head of orders to give security, which rose from 1,537 to 2,149. Whippings awarded by Magistrates declined from 3,202 to 2,538.

The six Sessions Judges disposed of 634 cases, involving 1,122 persons, during the year, compared with 623 cases, involving 1,205 persons, in 1898. The pending file (43 cases) was lighter, and the average duration of cases (34.7 days) shorter, than in the preceding year (60 cases, 38.9 days).

Out of 23,702 complaints preferred, 10,452, or 44 per cent., were dismissed under section 203, Criminal Procedure Code. In Bahraich and Gonda districts the percentage of dismissals was as high as 59. In 13,251 cases process issued, with the result that 9,500 cases ended in acquittals or discharges; but of this number no less than 6,941 were due to compromise, withdrawal or dismissal by default. It appears, therefore, that 6,310 cases were really tried out, of which 2,559, or 40 per cent., resulted in acquittals. Proceedings under section 250, Act V of 1898, were taken in 367 cases (as compared with 384 in 1898), and 375 persons were ordered to pay compensation. No cases of contempts of court occurred during the year.

Sixteen boys were sent to the Reformatory School during the year, as compared with 9 in 1898. Action was taken under section 31(a) of Act VIII of 1897 in 3 cases, and under section 31(b) in 11 cases. The number of juvenile offenders whipped under section 5, Act VI of 1864, decreased from 80 in 1898 to 34 in 1899. One hundred and twenty-nine persons were released on probation under the first offenders' section of the Criminal Procedure Code; and it was necessary to proceed under section 563 of the Code against 69 persons who had failed to keep the conditions of their recognizances.

There were during the year 2,333 appeals to Courts of Session, as compared with 2,402 in 1898. The number of persons concerned was 2,724 as compared with 2,922 in the previous year. In 10 per cent. of the cases disposed of the sentence was reduced or altered, and in 10 per cent. it was reversed. The percentage of wholly unsuccessful appeals was 77.6, as compared with 78.5 in 1898. The percentage of cases in which appeals were preferred to the total num able cases was 49.8, as against 44.4 in the previous year.

The Judicial Commissioner's Court consisted during the year of three Judges. The work before the Court was only slightly lighter than in 1898. Including appeals by the Local Government against acquittals, the Court had 703 appeals before it for disposal. Six hundred and forty-seven prisoners' appeals were disposed of, and in 511 cases (or in 79 per cent.) the original sentence was maintained. This percentage was the same in 1898. In 65 per cent. of the capital cases before it for confirmation or in appeal, the Court upheld the sentence, and in 25 per cent. of the cases the appeal was allowed.

5.--JAILS.

North-Western Provinces and Oudh.

The total number of convicts in the jails of these Provinces (exclusive of under-trial prisoners and civil prisoners) in the two years 1898 and 1899 are shown in the following table:—

					-	1898.	1889
Remained at commencement of the Received during the year	year 	74 <i>7</i>	•••	***	:::	82,379 46,765	27,833 44,996
				Total	}	79,144	72,829
Discharged from all causes Remained at the end of the year	***	444	***	***	:::	51,311 27,833	44,908 27,921
· · · · · · · · · · · · · · · · · · ·			Total dail	overge		30,246	27,439

The daily average of the convict population was decidedly below that of the previous year; but this is chiefly due to the fall in admissions which took place in 1898. The number of convicts in jail at the end of each of the two years was practically the same. The number of females imprisoned on conviction during the year was 2,191, as compared with 2,793 in 1898.

The number of civil prisoners admitted to jail was again somewhat high (1,447); but the total is not sufficiently large to allow of any certain conclusions being drawn from fluctuations.

Of the convicts admitted to jail during 1899, 3,725 (3,591 males and 134 females), or about 11 per cent. of the total number admitted, had been previously convicted. The percentage was 12 in 1898. The number of the habituals who were not identified before admission in 1899 was only 52, against 78 in the previous year. In all districts the work of tracing previous punishments was efficiently done, the Fatehgarh district alone showing an appreciable proportion (13 out of 150) of habituals not identified before conviction.

The number of convicts released from jails in 1899, as compared with the number released in the two previous years, was as follows:—

						. ——	
Released on-					1897,	1898.	1899,
(1) Expiry of sentences	,	•4•	***		91,510	50.045

(5) Other grounds	•••	•••	***		8,521	1,400	4
The C-						-,	

The figures against (5) are exceptional in 1897 and 1898 on account, respectively, of the Diamond Jubilee and of releases of short-term prisoners confined for offences connected with scarcity. For the first time there is a diminution in the number of

39

releases under the good conduct rules. The decrease is entirely among prisoners with sentences not exceeding two years, and there were actually a smaller number of these in confinement. There were six escapes in the year, four of these being escapes while employed on extra-mural labour.

PROTECTION.

Two hundred and sixty-three juvenile prisoners (212 males and 51 females) were admitted during the year, as compared with 266 in 1898. During the year a special ward for the confinement of juvenile female prisoners was opened in the Central Prison at Lucknow, and all female prisoners under 15 years of age, irrespective of length of sentence, are now imprisoned there. They are under the supervision of the European matron of the Central Jail, and a specially-selected Eurasian female warder is in immediate charge of the ward.

The year 1898 had shown a great decrease in the number of persons sentenced to imprisonment, attributable to the improved condition of the poorer classes as compared with the time of scarcity, and there was a further decrease in admissions in 1899, as below:—

<u> </u>								1898.	1899.
Sentenced	to imprisonn	ent not	exceeding si	x months s and not e	xceeding fiv	o years	· · · · ·	19,088 14,219	18,246 14,450
1,	11		five years	4+4	••	•••	***	864	782
91	transport	ation fo	r life	•••	4.00	•••	***	381	307
11	13	. 21	a term	•••	***	•••	•••	14	51
*1	death	4.00	•	***	***	•••,	***	153	142

The decrease is mainly in sentences of imprisonment for a short term, and is probably due to the same causes as in 1898. The increase in the number of term transportation sentences is, no doubt, due to Judges becoming aware of the decision by the Government of India to resume the actual deportation to the Andamans of persons under sentence of term transportation. Of late years only persons sentenced to transportation for life had been deported there.

The total number of punishments recorded in jails, which was 27,510 in 1897 and 35,153 in 1898, was 39,768 in 1899, and the number of major punishments rose from 5,258 to 6,915. The rise is said to be solely due to greater care being taken, in accordance with the orders of Government, in reporting and recording minor offences. This involves the infliction of a larger number of major punishments, as there are more men with previous minor offences recorded against them; and undoubtedly, on the whole, a greater stringency of jail discipline is involved. Of major punishments, the one most frequently used was imposing fetters or hand-cuffing (4,502). But the latter was only used in 103 cases. Separate, cellular, or solitary confinement, and penal diet with solitary confinement, were imposed in 648 and 165 cases respectively, against 981 and 372 in 1898. The number of corporal punishments showed a decrease from 352 to 326. This decrease, together with a large fall in the number of offences tried by criminal courts, shows a diminution in the number of very serious offences.

In 1898 a great improvement took place, compared with 1897, as regards the sickness and mortality in jails; but this was to be expected, considering the exceptional conditions of the earlier year. It is satisfactory to observe that a further improvement took place in 1899. The ratio of admissions to hospital in that year was 791.8 per mille, as compared with 920.5 in 1898: the daily average of sick was 37.8 per mille, as compared with 46.7; and deaths from all causes fell from 28.7 per mille in 1898 to 22.2 in 1899 which was the lowest recorded, with the exception of that for the year 1893. These general results appear excellent if it be remembered that the death-rate of the year among the free population was 33.19, and that a certain proportion of prisoners are always in a debilitated state at admission. The prisons showing the highest death rates were Gházipur District Jail, 46 per mille; Mirzapur, 89; Bánda, 48; besides Lalitpur and Pauri-5th class jails, in

which the total strength was small, and the proportion of deaths, therefore, is not a sure criterion. The Mirzapur and Banda jails also show a daily average number of sick far above the Provincial average. The case of Mirzapur jail was discussed last year, where the occurrence during 1899 of a serious outbreak of cerebro-spinal fever was mentioned. This disease caused eight deaths, and four others, which occurred while the prisoners were at Chunar, are ascribed to cholera. The total number of deaths was 22. The conditions of the Mirzapur jail have been often discussed, and remedial measures undertaken: and there is reason to believe that it will be necessary to abandon the present jail, and to build a new one in a more healthy locality. In the Ghazipur District Jail 26 deaths took place; the sanitary condition of the jail is reported as good, and the mortality is ascribed to the great unhealthiness of the Ghazipur district during August and September 1899. The conditions of the Bánda jail are well known, and a high death-rate is chronic there; that for the year under report (48) shows a considerable improvement over the previous year (62). It is reported that a large proportion of the prisoners admitted into this jail are usually in inferior health. Turning to the chief diseases in jails, it appears that one death only in 1899 was attributed to cholera, though it is suspected that four other deaths at Mirzapur were due to that disease. The number of deaths from dysentery fell from 190 to 144. The causes of this disease in jails have been discussed before, and it was said that the view, that each dysentery case should be treated as infectious, and should be isolated and treated in a separate cell, should be tested by experiment. There appears to be diversity of opinion among Jail Superintendents on the question; but as it, is reported, that some of them attach more weight than others to, and carry out more effectively, the precautions noted, it would seem that the difference, if any, in the spread of the disease between one jail and another would supply a sufficient answer. One hundred and twenty-one deaths were due to pneumonia, against 135 in 1898.

The total expenditure on maintenance and guard, excluding the cost of alterations and repairs of jails, amounted to Rs. 12,37,507, as compared with Rs. 14,12,152 in 1898 and Rs. 19,13,624 in 1897. The average cost per head fell from Rs. 43,15-10 in 1898 to Rs. 42-3-7 in 1899. The decrease took place chiefly in the dicting charges, which fell from Rs. 7,13,212 in 1898 to Rs. 5,89,711 in 1899; this fall in expenditure is due to the decrease in the daily average number of prisoners in confinement, and to the favourable rates at which grain was bought for storage. The rates were considerably lower than in 1898. The percentage of grain stored to the total quantity consumed was 72, and in every jail where storage operations were carried out, a profit resulted as compared with purchasing at market prices. Other heads of expenditure compare for 1898 and 1899 as follows:—

P	Heads of expenditure.								
Establishment Hospital charges Clothing and bedding Sanitation		17- 0-2 	114- 221 414- 121	٨	1 5 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4	***	::	4,26,951 79,542 82,564 6,924	Rs. 4,16,741 59,347 73,351 7,852

The saving in establishment was due to the abolition of the temporary establishment which was entertained up to October 1898 in connection with the Chunár temporary jail. The decrease under hospital charges is due to better health of the prisoners.

It was mentioned last year that the Government had sanctioned plans for the construction of cubicles in most barracks in which habitual offenders are confined, but that no actual progress had up to then been made for want of funds. During the year Rs. 40,000 were granted by Government for the erection of cubicles, which are now being constructed in the habitual barracks in the Allahabad, Agra and Bareilly Central Prisons. A further grant of Rs. 80,000 for the same purpose has been given by Government for the next financial year.

The total sum "paid into treasury on manufacturing account" was Rs. 4,21,522; and, as the cash drawn on manufacturing account during the year was Rs. 2,42,832, the net cash earnings of labouring convicts during the year stand at Rs. 1,78,690, giving an average earning of Rs. 6-9-0 per head on convicts sentenced to labour and of Rs. 15-13-0 per head on those employed on jail manufactures. The net cash earnings show a small increase over those for 1898 (Rs. 1,78,108); but, the number in jail being less, the average earning per convict sentenced to labour shows an appreciable rise (Rs. 5-14-0 to Rs. 6-9-0). Eleven thousand two hundred and eighty convicts, or 41.52 per cent. of the total number, were employed on manufactures. The cash earnings were highest at Allahabad (Rs. 41,170) and Agra (Rs. 19,244) among Central Prisons; at Allahabad (Rs. 4,638) and Agra (Rs. 3,739) among first class District Jails; at Jaunpur (Rs. 3,560), Aligarh (Rs. 2,021, plus Rs. 452 earned for Medical Department by making up quinine packets for sale), and Basti (Rs. 2,504) among second class jails; and at Saháranpur (Rs. 1,543) and Jhánsi (Rs. 1,234) among third class jails.

The working of the system of identifying criminals by finger impressions is in these Provinces entrusted to the Police Department. There has been an improvement on preceding years. There are now considerably over 50,000 "identities" on record.

Reformatory.—The following table exhibits the numerical strength of the School and the admissions and discharges during the past five years:—

						_						
	Year.		Remaining on 1st January.	Admitted.	Be-admitted after escape.	Discharged.	Transferred to jaul or lunationsylum, or otherwise disposed of on retrial.	Released by order of Government.	Escaped.	Died.	Remaining on 31st De- cember.	Daily average strength.
1895	•••		204	77		85	1	.,,	1	1	243	221:58
1896			243	10	,	26	8	11			208	224:67
1897	•••	144	208	61	1	35	2	2	.,,		231	224-20
1898		•••	231	69		48	1	6	3	2	240	235.00
1899	•••	•••	240	66		46	4	•••			256	247.25
			1	1	<u> </u>	1	<u> </u>				<u> </u>	`

The daily average number of boys (247) was higher in 1899 than that in 1898 (235) or in preceding years. The actual ladmissions, however, to the School are regulated by capacity, and, as there was always a certain proportion of the boys in hospital, the accommodation of the Reformatory, which is for 232 inmates with separate cubicles and 24 in hospital, was not exceeded. The health of the School, which had been indifferent in the previous year, showed a satisfactory improvement. No deathss took place.

All the boys are taught agricultural work in addition to any other trade which they may be learning, the latter trade being chosen, as a rule, with regard to their caste and probable future occupation. Inquiries were made from Magistrates regarding inmates of the Reformatory discharged during the past three years. Of the 124 boys regarding whom replies were received during the year, 29 were reported to be not traceable, 12 to have relapsed into criminal ways, and one to have emigrated: of the remaining 82, 77 were reported of good character.

The expenditure per boy during the year was Rs. 53-11-0, as compared with Rs. 54-7-0 in 1898. The total expenditure was Rs. 13,274, against Rs. 12,793. The profit earned by the farm and factory was Rs. 1,000, as compared with Rs. 791. Tailoring, shoemaking and agriculture gave the best results.

The Resolution of the Government of India deciding that all reformatory schools should be placed under the charge of the Education Department, and directing that the change should be effected as soon as possible, was received in September 1899, and this Government then desired the Director of Public Instruction, in communication with the Inspector-General of Prisons, to arrange for the transfer of control. Some time elapsed before a suitable man for the post of Superintendent of the School could be found. The arrangements for the transfer of the Reformatory to the Education Department will now shortly be completed; and the Lieutenant-Governor and Chief Commissioner contemplates the removal, before long, of the School from Bareilly to Chunar, where the Chunar Fort can be adapted to it.

6.—CIVIL JUSTICE.

(a) North-Western Provinces.

In all courts of original jurisdiction, except the courts of village munsifs, the number of institutions and disposals of suits as compared with the previous year were :-

			Suits insti- tuted.	Total for dis- posal, includ- ing remands, reviews and revivals.		. Pending.
1898	pleton.	***	99,172	109,602	100,275	9,327
1899		***	87,440	98,683	90,099	8,534

Institutions show a large decrease of 11,732 suits, and in disposals there is also a decrease of 10,176 cases. The pending file has been reduced by 793 cases. The figures relating to institutions and disposals are the lowest recorded within the last 20 years—excepting those of 1884.

Institutions have decreased in every district except three, viz., Jaunpur, Azamgarh and Benares, in which districts the increases are very small. The falling off in institutions is most marked in :-

		Inst	ituted in	1899.	Instituted in 1898.	Decroase.
Moradabad		1	7,799	against	10,223	2,424
Bareilly			5,002	99	6,682	1,680
Sháhjahánpu	ır		7,342	27	8,898	1,556
Jhánai		,	3,045	27	4,202	1,157
Agra		•••	8,419	37	9,410	991
Gorakhpur	•••	***	4,226	**	4,978	752

The decrease in Moradabad is attributed to scarcity, the result of early cossation of the monsoon, while in Shahjahanpur the falling off is ascribed to the high price of food grains owing to bad seasons and the exportation of grain to faminestricken areas. Another reason given is the poorness of the sugar-cane crop for which advances are taken by a large proportion of cultivators, and which therefore affects litigation. In Jhansi the decrease is said to be due to debtors being unable to pay on account of recent famine in Bundelkhand and creditors abstaining from filing suits likely to prove infructuous.

The suits instituted in regular courts in 1899 are classified as follows, figures for the two previous years being given for comparison :-

				1897.	1898.	1899.
For money or a	novable p	roperty	***	73,867	72,256	62,187
For immovable	propert	,		7,054	7,425	7,260
Mortgage suits		***	***	15,038	15,048	13,901
For specific reli		•••		2,378	2,321	2,345
To establish a	right of p	re-emption		1,551	1,772	1,857
Other suits	190	***	368	851	390	
		Total	***	100,256	99,172	87,440
						-

The suits relating to money or movables have fallen by 10,068, and mortgage suits have decreased by 1,147. The figures relating to money suits were abnormally high in 1897 and 1898. The corresponding figure for 1896 was 66,406.

The values of the subject-matter in dispute in regular courts have been Rs. 3,86,31,532 against Rs. 2,80,02,209 in 1898.

There is thus an increase of Rs. 1,06,29,323 in the valuation of suits filed as compared with that of the previous year, rotwithstanding the large fall in institutions, the largest increases being in Moradabad, Gorakhpur and Agra, where they exceeded 16 lakhs.

The increase in valuation in Moradabad is due to the rise in the number of institutions in the Subordinate Judge's court, which include three big cases, two of which relating to the Kanth estate, are valued at about five lakhs. In Gorakhpur the increase results from the institution of one case of the value of 75 lakhs. In Agra and Shahjahanpur the increase is owing to cases of large value being instituted in the Subordinate Judges' courts.

The number of contested suits disposed of was 26,977 or 29.9 per cent. of the total number of suits decided. This percentage is higher than it was in the previous year. The preceding five years' percentages were 27.4 (in 1898), 28.4, 30, 30 and 28.9, respectively.

Judgeships showing percentages considerably above the average are Azamgarh (41), Gorakhpur (38), Gházipur (36), Sháhjahánpur and Cawnpore (34 each), and Benares and Farrukhabad (33 each).

As hitherto, the highest percentages of contested suits on suits disposed of are to be found in the courts of Subordinate Judges.

Thirty-two per cent. of suits were decided ex-parte. The corresponding figure for the previous year was 33 per cent.

The percentage of suits in which plaintiffs were successful was 59.1 as compared with 59.4 (in 1898), 61.3 and 59.4 in the three previous years, respectively.

In contested cases the average duration has risen from 62 days in 1898 to 68 days in 1899, but is still lower than the figure for 1896, which was 71 days.

In Small Cause Courts the duration has fallen from 33 days in 1898 to 32 days in 1899.

In uncontested cases the average duration has increased from 27 days in 1898 to 28 days in 1899.

The following is a list of the judgeships in which the number of suits pending at the close of the year exceeded 500:—

Aligarh		***	***	1,194	1	Moradabad	***	444	759
Agra	113	***		994	- 1	Saháranpur	***	***	750
Meerut		***	•••	847	٠				

Gorakhpur and Cawnpore have disappeared from the list, which is otherwise the same as it was in 1898.

The following table exhibits the number of witnesses summoned, of witnesses examined, and of parties examined during the last three years:—

				1897.	1898.	1899.
Witnesses summone	be	• • •	•••	266,371	293,421	268,314
Ditto examined	ı	***	•••	119,197	126,067	105,607
Parties ditto	***	4-4	414	28,683	27,070	25,785

The amount of diet-money paid to witnesses was as follows:—

						$\mathbf{R}_{\mathbf{s}}$.	A verag	вр	er	witness,	
1897	***	•••	***	***	***	1,67,846	10 aı	BGE	в 1	pie.	
1898	***		***	***		1,84,085	12	,,	5	1>	
1899	174	***	T-1	***	***	1,83,303	12	*,	8	"	

The judgeships of Farrukhabad, Gházipur, Mirzapur, Jaunpur, Azamgarh and Agra show the lowest averages of witnesses paid; and Bánda, Benares, Meerut, Jhánsi, Cawnpore and Moradabad the highest.

There was a decrease of 1876 as compared with last year in the figures for miscellaneous judicial cases, which is mainly accounted for in the following districts:—

Decre				J		$oldsymbol{D}$ ecrease.		
Bháhjahánpar	***	***	528	Cawnpore	•••		***	161
Gorakhpur	***	140	386	Benares	***		•••	156
Bareilly	170	***	306	Aligarh	***	•••	•••	155
Gházipur	***	***	289	Saháranpur	***			126

The following statement shows the work done by the civil courts during the last six years in the execution of decrees:—

					Applications for	or execution.
1894				For disposal.	Disposed of.	Pending in the Civil Coorts.
	***	***		89,035	76,226	12,809
1895	***	•••	***	91,488	77,955	13,533
1896	1.4	***	•••	97,255	85,101	12,154
1897	•••	***	•••	100,407	87,160	13,247
1898	•••	***	***	107,934	95,209	12,725
1899	***	***	***	100,782	89,009	11,778

The number of applications for disposal before the courts was 7,152 less than it was in 1898, in which year the number of applications for disposal was abnormally high. Disposals have also decreased by 6,200; the pending file is, however, lower than that of 1898 by 952 cases.

The amount realised in execution of decrees was Rs. 65,32,370, a decrease of Rs. 6,06,605. The fall in the number of applications disposed of partly explains the decrease in realisations. Further, the figures for 1898 were higher than they had been for 10 years. The amount for 1899 is, notwithstanding, much higher than the average for the last 10 years.

The same number of judgment-debtors were imprisoned in 1899 as in 1898, viz., 525; but the number of persons arrested increased by 7; while the number of cases in which immovable property was brought to sale decreased by 1,334. Movable property was sold in 350 less cases in 1899 than in 1898. Comparative figures for the last three years are as follows:—

Indoment-de	btors imprisoned				1897.	1898.	1899.
Ditto	arrested	***	***	***	425	525	525
	property sold	***			1,243	1,343	1,350
Movable		444	***	***	6,807	8,435	7,101
	ditto	-4.4	***		1,989	1,983	1.689

Five thousand eight hundred and forty-three applications for execution were transferred to other courts for disposal: of these, 4,953 were applications transferred to the courts of Collectors under section 320 of the Code of Civil Procedure.

The following figures show the state of the appellate files of all subordinate courts for the last five years:—

1895				Fc	r disposal.	Disposed of.	Pending.
1896	***	***	***	***	14,064	9,927	4.137
1897	***	***		***	18,414	2.185	•
1898	•••	•••	***		12,948	8,217	4,229
1899	***	• • •	***		13,294	8,192	4,731
1099	•••	•••	***	***	13,873	7,955	5,102 5,019

The District Judges disposed of 576 fewer Munsifs' appeals, 187 fewer appeals from Subordinate Judges' decrees, and 32 more appeals from Revenue Courts.

Most appeals were disposed of in the following courts of District Judges (including Additional Judges):—

District Judge	of Azamoarh						
Ditto	Aligarh	***	•••	•••	(**	•••	4 50
Ditto	Gorakhpur		***	***	•••	***	387
Disto	Benares	***	•••	***	***	***	878
		199	***	***	104	•••	249

The average number of appeals decided by 19 courts of Subordinate or permanent Additional Subordinate Judges was 168 as compared with 196 in the previous year. Sháhjahánpur and Gorakhpur show increases in the number of appeals disposed of by Subordinate Judges; while in Saháranpur, Farrukhabad, Jaunpur, Gházipur (Additional), the number of appeals disposed of decreased.

The numbers of appeals pending over three months at the close of each of the last five years are as follow:—

-				1895.	1896.	1897.	1898.	1899.
Before Subordinate	Judges	***	***	491	408	337	543	675
,, District	3,	400	***	1,536	2,228	2,289	2,622	3,266
		Total	44.	2,027	2,636	2,626	3,165	3,941

The duration of appeals decided by District and Subordinate Judges was as follows:—

The number of objections under section 561, Code of Civil Procedure, was 387, as against 414 in 1898.

Miscellaneous judicial appeals filed and disposed of during the last two years were as under:—

							Nu d	mber for 1sposal.	Number lisposed of.	Pending.
	1898	***	101			***	***	468	856	112

73	7 31	.อี	1,052		977	506			

In making the above calculations no account has been taken of the work done by the temporary Additional Judges and Additional Subordinate Judges.

One District, four Subordinate Judges and 23 Munsifs, in the exercise of Small Cause Court powers, disposed of cases with the following average numbers:—

			Judge.	Subor	dinatelJudges.	Munsifs.
Suits	***		***		413	£27
Execution of decrees		,.,	2		187	221
Miscellaneous cases	,41		111		36	23
•			12			

The following table shows the state of the civil business which came before the High Court during 1898 and 1899:—

	Institut pending previous	ions with file of year.	Disp	osals.	Pending at the close of—		
	1898.	1899.	1898.	1899.	1898,	1899.	
1. Original suits 2. Miscellaneous judicial cases 3. First appeals 4. Second appeals 5. Letters Patent appeals 6. First appeals from orders 7. Privy Council appeals (applications).	1 883 801 2,422 127 199 85	1 452 799 2,856 89 285 66	 235 1,059 91 99 24	 413 344 984 67 169 17	1 86 566 1,363 36 100	1 39 455 1,372 22 66 49	
Total	3,968	3,998	1,855	1,994	2,113	2,004	

During the year 1899 the Judicial Committee of the Privy Council determined 12 appeals. In six the decision was upheld, in one modified, in three reversed, the other two cases were dismissed for want of prosecution.

The average duration in days of the cases decided by the Court was as follows:—

						1897.	1898.	1899.
Head	1	***	•••	•••	***	***	•••	•••
Do.	2	{ contested uncontested	***	***	***	183	102	97
		(uncontested	***	***	***	21	46	12
Do-	В	***	•••	***	***	5 97	502	611
	4	•••	110	***	***	538	505	419
Do,	5	•••	•••	•••	44.0	484	249	134
Do.	6	***	***	•••	•••	142	165	128

At the end of 1899 the pending first and second appeals belonged to the following years:—

	1892.	1894.	1895.	1896.	1897.	1898.	1899.
First appeals	2	1	1.	11	Б 9	184	197
Second ditto	-1-	***	•••	3	224	468	677

The two cases of 1892 are those to which reference was made in last year's report. The cases are still pending in connection with proceedings for substitution of names of parties.

The appeal of 1894 is awaiting decision of a case now before the Privy Council. The first appeal of 1895 remained pending owing to the findings on remand not having been received from the lower court.

There were 233 first appeals and 993 second appeals instituted during the year. The following table compares the general results of the hearing of first and second appeals during the last two years:—

Without trial Without contest	Confirmed Modified Reversed Remanded	*14 *** ***	•	104 100 201 201 201	1898. 36 6	1899. 24 5	1898. 128 81 2 8	1899. 160 20 2 10
Contested	Confirmed Modified Reversed Remanded	Cotal		***	46 123 20 41 5	34 207 27 59 17	174 608 42 180 60	192 526 39 167 70

Ninety-five second appeals were summarily dismissed in 1899 under section 551 of the Code of Civil Procedure as against 75 in 1898. Of contested first appeals in 66.8 per cent. the decrees appealed against were confirmed as against 65.1 per cent. in 1898. In second appeals the percentage was 66.4 against 68.1 in 1898.

The values of court-fee stamps received in subordinate courts during the last three years have been as follow:—

							${f R}$ e.
1897	• • • •	***	•••	***			15,98,251
1898		•••	***	•••	•••	***	16,41,712
1899	***	•••	***	•••	144	•••	15,14,529

The most noticeable variations are given in the table below :-

Allahabad		1+1	***	***	•••	 Increase. Rs. 7,724
			Decrease.	ŀ		Decreaso.
			Rs.	{		$\mathbf{R}_{\mathbf{S}}.$
Cawnpore	• • •		25,984	Benares	***	17,559
Saháranpur	1.4	104	22,054	Meerut		18,640
Agra	•••	***	18,804	Bareilly	***	10,264

In the High Court there was a decrease under this head of Rs. 20,455.

Refunds in the High Court amounted to Rs. 7,604 as compared with Rs. 2,210 in 1898.

Rupees 10,835 were realised in the court on account of deficient stamp-duty on documents examined in the court's office. The corresponding amount last year was Rs. 11,207.

There were only 91 courts of village munsifs existing at the end of 1899. The number of circles in Shahjahanpur were reduced from 46 in 1898 to 28 in 1899. Three of the circles in Shahjahanpur show no institutions during the year.

The institutions show a considerable falling off, only 2,713 suits having been instituted in 1899 as compared with 3,465 in the year previous: of these 1,139 alone were instituted in the courts situated in the Saháranpur Judgeship. The following table exhibits the work for disposal, the amount done, and the number of suits pending during the last four years:—

			Total	l for disposal.	Total disposed of.	Pending.
1896	***	***	***	5,982	5,581	178
1897		•••	***	5,4 C6	5,114	151
1898		***		3,686	3,403	100
1899		***		2,015	2,603	102

The decrease in institutions was common to the courts in three out of the four judgeships: the courts in the Saharanpur Judgeship show, however, a slight increase on the figures of 1898.

The total number of suits for disposal, including those pending from the previous year, was 2,815: of these 2,606 were disposed of, 107 being transferred by district munsifs to their own courts, leaving a pending balance of 102 at the close of the year. The manner in which these 2,606 cases were disposed of was as follows:—

Without	trial	••0	\$10		***	334	12.8	per cent.
	t contest	-	***		+#1	2,084	80.0	5)
With	ditto		111	100	04+	188	7.2	33
.,				Total	*10	2,606		

As in previous years, the suits based on oral contract were most numerous, 1,225 out of 2,713 suits falling under this head. As regards valuation, the majority of the suits were for the recovery of sums not exceeding Rs. 20.

(b) Oudh.

In the following table the chief statistics regarding cases in courts of original jurisdiction are compared with those of 1898:—

			Civil s	uits.	<u> </u>		Ŋ	liscollane	us case	
	Insti	tuted.	Dispo	sed of.	Pen	ding.	Dispo	sed of.	Pending.	
	1898.	1899.	1898.	1899.	1898.	1899.	1898.	1899.	1898.	1899.
Unpaid tribunals	1,389	2,932	1,298	2,846	233	372	64	203	15	38
Paid sub-divisional tribunals.	15,773	17,233	16,881	16,845	2,676	3,750	7,997	7,423	734	780
Small Cause Courts.	34,333	28,670	35,574	28,611	2,084	2,342	2,420	1,991	180	166
District Courts	11	7	29	11	6	4	665	729	203	153
Total ,	51,506	48,842	53,782	48,313	4,909	6,468	11,146	10,846	1,182	1,137

The steady decline in the number of institutions which has been observed since 1894 continued during the year, but the number of institutions per 10,000 of the population was still considerably higher in Oudh (38) than in the North-Western Provinces (26). It is reported that, while suits for money or movable property have been steadily decreasing, there has been a decided tendency for the number of mortgage suits to increase. No Additional Civil Judges were employed during the year. The decrease under disposals was due to the decrease (5,456) in the number of Small Cause cases decided by Munsifs. The number of cases heard by Honorary Munsifs showed a satisfactory increase, and the total number of civil suits and miscellaneous cases disposed of by these gentlemen is now above the figures of the year 1896, preceding the passing of the North-Western Provinces and Oudh The Government has recently arranged to appoint Honorary Munsifs Act. Sultanpur. Honorary Munsifs in those districts* in Oudh where none have yet been appointed. The despatch of litigation in Honorary Munsifs' Courts improved considerably during the year: the average duration of uncontested cases fell from 51 to 37 days, and of contested cases from 111 to 40 days.

The average duration of civil suits in the principal courts of original jurisdiction is compared below with the duration in 1897 and 1898:—

		Duration in days of—								
		Co	ntested st	nits.	Uncontested suits.					
		1897,	1898.	1899.	1897.	1898.	1899,			
				[
Munsifs Regular suits		110	99	78	53	43	37			
(Small Cause Court	suits,	49	50	40	31	28	24			
Subordinate Judges { Regular suits	,	148	147	146	57	1.24	94,			
(Small Cause Court	suits,	47	44	57	88	34	31			

The disposal of work in Munsifs' Courts in Oudh continues to improve. In Subordinate Judges' Courts also the disposal of regular cases improved somewhat, as compared with the preceding year; in the case of contested cases, the average duration (146 days) was lower than in the North-Western Provinces (154 days) in 1899, but the duration of uncontested cases was higher. There is now only one case pending for over two years in which a decision of the Privy Council in appeal is awaited, while at the end of 1898 there were 14 such cases. The pending file of miscellaneous cases was also materially reduced during the year.

There were 141 fewer regular appeals for disposal by Subordinate and District Judges than in the preceding year, and, as disposals slightly improved, the pending file was somewhat lightened. The following statement compares the figures for the two years:—

-	Total n for dis		Num dispos	ber ed of.	Pend	ending.	
	1898.	1899.	1898.	1899.	1898.	1899.	
District Appellate Courts other than Chief Courts of districts.	1,917	1,865	1,524	1,514	393	351	
Chief Appellate Courts of districts	1,116	1,027	675	726	441	300	
Total	3,033	2,892	2,199	2,240	834	651	

Of the 351 appeals left pending by Subordinate Judges, 83 were of older date than six months. Disposals by District Judges increased, although no Additional Judges were employed during the year. The number of rent and miscellaneous appeals, however, disposed of by District Judges (in addition to the 726 regular appeals above shown) was somewhat less than in 1898. The average duration of appeals was practically unchanged in the Courts of Subordinate Judges, but improved considerably in District Judges' Courts, from 452 days in 1898 to 264 days in 1899. The percentage of cases in which the decrees of the lower Courts were disturbed was 40·3 in the case of appeals to Subordinate Judges and 30·0 in the case of appeals to District Judges; the figures for the preceding year were 40·9 and 28·8 respectively. The percentage of interference to the total number of appeals is about the same as in the North-Western Provinces.

The receipts from court fees (other than process fees) realized during the year were Rs. 5,07,004, as compared with Rs. 5,27,790 in 1898 and Rs. 5,09,829 in 1897. The decrease as compared with the preceding year is due to fewer institutions of suits: the total value of suits instituted having decreased from Rs. 2,31,60,942 in 1898 to Rs. 1,02,73,254 in 1899. The figures for the preceding year included three suits of abnormally high value in the Subordinate Judge's Court, Unao.

The Judicial Commissioner's Court consisted during the year of three Judges. There were 750 cases of all kinds pending before the Court at the beginning of 1899; and 1,885 cases (as compared with 1,984 in 1898) were instituted during the year. Of the total number for disposal (2,635), the Court disposed of 1,774 cases, leaving a balance of 861 cases pending at the close of the year. The number of disposals was considerably less than in the preceding year, owing to the absence of one of the Judges on short leave, the longer vacation taken by the Court, and the increased number of first appeals heard by a Bench of two Judges.

(c). Kumaun.

In the subjoined table the work for disposal by the civil courts of Kumaun during 1899 is compared with that of the preceding year:—

	$\overline{\ \ }$		Origi	nal cases.	,		A	peals.		Applications for		
District.		Sui	ts.	Miscella	ineous.	Sui	ts.	Miscell	nneous.	executi decr	on of

Commissioner's Co	urt	2	2	10	10	112	86	11	9		,	

The number of institutions fell from 4,959 in 1898 to 4,539. This decrease is shared by all classes of courts, and is most noticeable in the districts of Naini Tal and Garhwal. There is a small increase in the Almora district total, the Court of Small Causes showing an increase, which, however, is ascribed partly to wrong classification in previous years. Suits for money or movable property decreased in all districts; while in Almora and Naini Tal a small numerical increase occurred in suits for title and other reliefs.

The following table shows the original work disposed of by the civil courts in each district;—

-				Origina	l suits.			Miscellaneous cases.						A verage duration in days of original suits.

The figures for cases for disposal include suits left pending from the previous year: and the working results of the year must be considered, on the whole, creditable, as the total number of cases left pending declined from 570 to 420. The percentage of disposals throughout the division rose from 90 to 92, and is now uniformly high in all districts. The number of cases decreed ex parts, on the whole, declined, but was high in Naini Tal (27.4 per cent). In all districts the number of cases dismissed by default was higher than in 1898: in Naini Tal and Garhwal this is ascribed to cases being settled out of court, and the same explanation may apparently be applied to Almora, where the percentage of petty cases (which would naturally be settled in this way) is higher than in either of the other districts. The

percentage of cases settled after contest increased slightly in Almora and Garhwal, but declined in Naini Tal.

In the following statement is shown the result of applications for execution of decrees:—

				er for	Number	pending	Perce	ntage on t	otal dispos	ed of.
	District.		disp		at end	of year.	Part execu		Wholly executed.	
			1898.	1899.	1898.	1899.	1898.	1899.	1898.	1899.
Naini Tál			1,321	1,041	170	112	12	16	17	19
Almora	•••		854	986	99	89	13	12	26	25
Garhwál	414	•	533	613	77	105	25	22	33	36
	Total		2,708	2,640	346	306	15	16	24	25

The highest measure of success thus continues to be reached in the Garhwall district: the work of execution of decrees was previously unsatisfactory in Naini Tal, but improved somewhat during the year.

The total number of appeals for disposal by the district and divisional courts was 438—a trifling variation from the figures of the previous year. Of this number 401 were disposed of, leaving 37 pending at the end of the year, mostly in the Almora district and the Commissioner's Court. Fourteen appeals were heard ex parte, and 308 were contested. That the courts are becoming better acquainted with the civil law and rules of procedure may be inferred from the decreasing proportion of successful appeals. In no district did the percentage of success exceed 30. Out of contested appeals the percentage of cases in which decrees were confirmed has risen from 60 in 1898 to 68 in 1899, and the percentage of such cares in which the lower court's decree was either modified or reversed has similarly fallen from 34 to 26. Out of 31 miscellaneous appeals the lower court's order was disturbed in 11 cases. During the course of the year 23 applications were made to Government, under rule 17 of the Kumaun Rules, against final orders of the Commissioner. Three of the cases are still pending, and one was not proceeded with. Of the remainder Government declined to interfere in 12 cases, and in seven cases, on the advice of the High Court of Judicature, North-Western Provinces, to whom a reference was made, Government directed that the Commissioner's order be set aside or modified.

The total receipts of the year from process fees amounted to Rs. 11,262, as compared with Rs. 12,201 in the previous year, and, deducting disbursements, there was on this account a balance of Rs. 4,588. The diminution in the receipts may be attributed directly to decreased litigation. The total income of the civil courts of the division showed a deficit of Rs. 14,519, as compared with Rs. 23,127 in 1898. Garhwall is the only district with a surplus balance, but the deficit in the other districts decreased.

7.—Infanticide.

North-Western Provinces.

The Act was in force, as in the preceding year, in 16 districts. Three hundred and sixty villages were under the rules at the beginning of the year, and the exemption of 92 villages reduced the number to 268 at the close of the year. One hundred and four of these (against 155 in the previous year) are in the Mainpuri district. The next largest number in any district is 31 in Sahárappur.

The following figures show the main results of the year:-

						Doy∎.	Giria
Population u	nder 6 on 1	st April 189	9	***	***	3,406	2,217
Birthe	***	144	***	,,,	•••	1,149	980
Deaths	***	***	***	,,,,	•••	449	432
Arrivals	***	***	***	,,,	***	416	415
Removals		***	***	***	***	473	381
Transfers to	population .	over 6	***	***		656	401
Besultant por	pulation on	1st April 19	900	***	***	3,393	2,398

The initial population differs from the resultant population shown in the previous report in consequence of the omission of the villages which were exempted during the year. The average ratio of births as between boys and girls in infanticide districts was 54 boys to 46 girls, the corresponding Provincial rates for 1899 being 52 and 48. The average death rate of children under one year in infanticide districts was 52.34 boys to 47.66 girls. The proportion of boys to 100 girls was, at the commencement of the year, 153 and at its close 148.

In the Saháranpur district the register of specially guilty villages is now blank; and since the close of the year proposals have been submitted and sanctioned for the exemption of 5 out of the 31 villages which were still under the rules. In Muzaffarnagar there are now only 6 villages under the rules: the numbers are too small for the application of any tests, but it is thought better not to exempt these few remaining villages for the present. In the Meerut district, though there are still 9 proclaimed villages, only 1 village (inhabited by Gujars) is viewed with suspicion. In the Agra district the proportion of boys under six to 100 girls fell from 125 to 117; the Commissioner thinks there is still room for suspicion. The Mainpuri district still has 104 registered villages, or far the largest number of any district in the Provinces: 13 of these are on the "specially guilty" register. In Etawah the number of specially guilty villages was raised from 3 to 5 during the year. The number of boys to every 100 girls is still as high as 128. The season is said to have been an unhealthy one in the Farukhabad district, where the death rate of children of both sexes was above the average. Of the 5 villages that were under the rules in the Campore district 3 have since been exempted. The proportion of boys to 100 girls in this district was 152 at the commencement of the year and 124 at its close. In Jalaun also two out of the 6 villages have been exempted, as have also all the 5 villages in the Hamirpur district. Ten villages in Bijnor are under the rules: the proportion of boys to 100 girls was 161 at the beginning, and 158 at the end, of the year. In Bareilly the proportion fell from 119 to 111, and proposals for the exemption of 5 of the few remaining villages have recently been sanctioned by Government. In the 7 villages in Budaun the proportion of boys to girls is still 130 to 100, and suspicion therefore exists, though the District Magistrate and the District Superintendent of Police think that the crime of infanticide is probably no longer practised. In the Shahjahanpur district there are only 3 proclaimed villages, but the statistics about them are somewhat unfavourable.

8.—LITIGATION TO WHICH GOVERNMENT WAS A PARTY. North-Western Provinces and Oudh.

The following table shows the result of litigation during the year in courts of first instance:—

					Decid	led—		
				For disposal	For the State.		Compromised or withdrawn.	Pending.
	_			<u> </u>]
	plaintiff	***	w	12	7	1	2	2
Do.	defendant	***	*"	47	25	6	5	11
	-	Total	••	59	32	7	7	13

Of the six cases decided against the State as defendant, two were appealed (one appeal has been lost) and in one the Government was not really unsuccessful. The other three cases were not of importance. A claim, valued at $2\frac{1}{2}$ lakhs, by Bachchu Singh and Jai Narayan Singh to the escheated Holagarh estate (Allahabad district) is stated to have been dismissed by the Subordinate Judge on the point of notice since the end of the year. In courts of appeal the State appearing as appellant won three out of five decided cases, and lost two, of which one is under second appeal in the High Court. As respondent the State appeared in 13 cases decided during the year and was successful in eight. The High Court decreed against the State and the Municipal Board, Gorakhpur, the suit (valued at Rs. 10,500) of Mathura Das and others for a plot of land occupied by a market, and no further appeal was preferred.

In regard to the value of claims, a much greater measure of success than in 1897-98 is shown under "Claims and appeals by the State," the percentage decreed or allowed in favour of the State being 80.6, as compared with 20.5. Under "Claims and appeals against the State," the percentage decreed in favour of the State was 98.4 in 1897-98 and 56.5 in 1898-99.

Realizations were somewhat better than in the previous year. The total sum for realization was Rs. 19,298-11-8; of this, Rs. 4,315-11-8, or 22 per cent. (against 18 per cent. in 1897-98), was recovered. Of the balance, Rs. 993-11-2 were remitted, Rs. 12,132-13-2 are reported recoverable, and Rs. 1,856-5-8 doubtful. The bulk (Rs. 7,013) of the recoverable balance consists of costs decreed by the Privy Council in the appeal case, Bijai Bahadur Singh and others v. Secretary of State (Allahabad district). The amount expended by the State in litigation was Rs. 6,006-9-0, as against Rs. 5,416-12-11 in the previous year.

The following table summarizes the result of the Court of Wards' litigation during the year:—

		Estate :	plaintiff or ap	pellant.	Estate defendant or respondent.			
·	1	For.	Against.	Compro- mised or withdrawn,	For.	Against.	Compro- mised or withdrawn.	
41-	 \$99 ***	62 11	2 9	8	42 29	22 14	7	

These figures show a high measure of success in suits instituted by the Court. In regard to value, out of claims amounting to Rs. 1,02,608-14-8, brought by the Court of Wards and decided, Rs. 52,180-6-7, or 50 per cent., were decreed, and out of Rs. 10,69,888-10-5 claimed from it, decrees were given for Rs. 35,691-4-9, or 3 per cent., only. The suit of largest value decided in favour of the Court was a claim (valued Rs. 9,00,000) by Sheopal Singh to the whole of the Korihar Sataon Estate, Rae Bareli. Out of 35 miscellaneous proceedings to which the Court of Wards was a party, 30 were decided in its favour and 4 against it (one remained pending). The realizations amounted to Rs. 42,723-5-9, or 16 per cent. of the total amount (Rs. 2,61,668-5-10) due to the Court of Wards; the percentage of realization in the previous year had been 14. There is still a large outstanding balance, of which apparently considerably more than a lakh is regarded as recoverable: all that was possible is reported to have been done to promote realization.

Seventeen suits or appeals brought by or against Municipal Boards were dealt with by the Legal Remembrancer. The suit of most importance that was lost was that between the Cawnpore Municipal Board and Mr. Strachey, Barrister-at-Law, relative to the assessment of the latter to the municipal tax on trades and professions.

9.—REGISTRATION.

In the following table the principal figures for 1899-1900 are shown in comparison with those of 1898-99:—

		Compu	lsory re	gistration.	Opti	onal regist	ration.	pente	опв			
Year.	-	Of documents relating to immovable Frogerty,	Офыя.	Total	Of documents relations in the property, Book No. I.		Total.	Total number of documents	Miscellaneous transactions	Receipts.	Expenditure.	Surplus.
1070 00										$\mathbf{R}_{\mathbf{S}}.$	Rs.	Rs.
	***	123,552	48	123,600	35,464	39,376	74,840	198,440	72,780	4,09,928	2,32,824	1,77,10
1899-1900	***	131,983	54	132,037	38,055	37,128	75,188	207,220	73,108	4,26,110	2,37,086	1,89,02
Difference		+ 8,431	+6	+8,437	+ 2,591	-2,248	+343	+8,780	+328	+16,182	+4,262	+11,92

There was an increase in the total number both of compulsory and optional registrations. Under optional registration, however, though there was an increase under documents relating to immovable property (Book No. I), there was a decrease of almost equal amount under other registrations. The decrease was under optional registrations of documents relating to movable property (Book No. IV), which fell from 38,032 to 35,644. The decrease was entirely in the Bareilly district, where it amounted to 2,951, owing to a poor sugar season. Miscellaneous transactions, of which more than half were applications for copies and searches, showed a small increase from 72,780 to 73,108: under this head, however, the number of operations shown under the Agriculturists' Loans Act fell from 7,796 to 4,989. There were nine prosecutions during the year; they were mostly for false personation or false statements, but in one of them a Sub-Registrar was charged with bribery and corruption.

The general increase in registration transactions is mainly attributable to the active registration of leases in the last month of the year, which was due to the landlords' desire to discount the anticipated passing of the new Rent Act. The expected changes in the rent law are stated to have affected in this way the Saháranpur district, more than any other.

The receipts of the Department increased by Rs. 16,182 and the expenditure by Rs. 4,262; the increase of expenditure being chiefly due to the appointment of Inspectors of Registration Offices. Owing, however, to the death of one of these Inspectors (whose place was not immediately filled up), and the illness of the other, inspections by these officers were fewer than they will be under normal circumstances. The number of offices inspected by Registrars and by revenue officers was about the same as in the preceding year. This duty was satisfactorily performed by many Registrars (District Judges). In Gházipur, as in the preceding year, no office was inspected, the officer who was Registrar for most of the year being unequal to the duties of this Judgeship. In Farukhabad, where there are only six offices, two only were inspected.

Eight Registration sub-offices (all in Oudh), which were found to be superfluous, were closed during the year. Since the end of the year a complete scheme has been approved by Government for reducing the offices in Oudh to the number really required, and for assimilating the system of payment of Oudh Sub-Registrars and their establishments to that in force in the North-Western Provinces.

10.-MUNICIPAL.

The Bill to make better provision for the organization and administration of Municipalities in the North-Western Provinces and Oudh was passed by the Local Legislative Council (I of 1900) during the year, and received the assent of the Governor-General in Council on the 20th February 1900. It is an important measure, similar in many respects to the Panjáb Municipal Act, XX of 1891, and consolidating both the previous Municipal enactments and a number of scattered rules and byelaws of general application. An extensive revision of the rules made under the old Acts has been engaging the attention of the Government since the passing of the new Act.

The number of Municipalities in the Provinces remained at 104, as in the previous year, and there was no change in the classification by population. Seats were contested in 64 Municipalities. A keener interest than usual was shown in all the elections: and the only instances where the percentage of voters to the electoral roll was exceptionally low were Azamgarh and four petty Municipalities in Oudh.

The District Magistrates in the following six important Municipalities are ex-officio Chairmen of the boards:—

Agra. Allahabad. Bareilly. Benares. Lucknow. Moradabad.

In all other Act XV of 1883 Municipalities the Chairmen are elected by the boards. In 82 Municipalities the District Magistrate has been elected and in six outlying towns the Tahsíldárs. The Municipality of Fyzabad is still administered by a non-official Chairman; but in all other Municipalities at the headquarters of districts the District Officer presides.

7. The table below shows the constitution of the boards and committees in each division at the close of the year:—

Division.		Ex officio.	Nominated.	Elected.	Total.	Officials.	Non- officials.	Europeans.	Natives.
Meerut Agra Bohilkhaud Allahabad Benares Gorakhpur Kumaun		22 13 14 23 6 1	52 46 60 27 18 8	276 177 238 115 88 29 20	350 236 312 105 112 38 47	92 47 54 38 20 6	258 189 258 127 92 32 32	75 34 32 30 16 5	275 202 280 135 97 33
Lucknow Fyzabad	***	10 6	30 41	158 158	193 200	38 4/7	155 153	26 20	167 180
Total		104	300	1,249	1,653	357	1,296	253	1,400

The average number of meetings held by the boards and committees was 22.7 as compared with 21.4 in 1898-99. The average number of members on each board was 15.8 as against 15.3 in the previous year. The average number present at each meeting has increased from 8.7 to 9.1, and the average attendance at each meeting from 56.5 to 57.6 per cent of the total number of members. The best attendances were in Cawnpore, Jhánsi, Lalitpur and Haldwáni; while Bánda again makes, in this respect, by far the worst figure in the Provinces. The only board that held less than 12 meetings during the year was that of the Unao Municipality, the administration of which was in several other matters defective.

The system of working through sub-committees continues to commend itself to boards and has been considerably extended. The delegation of the detailed control of the octroi system to a special sub-committee, though a new measure with many boards, has worked satisfactorily, and is believed to have had some share in the general improvement observable in the octroi administration. The reports before

the Government continue to show an increase of interest on the part of members in the work both of the boards and of the sub-committees; and the light thrown by the audit staff upon the methods of the boards' control has unquestionably resulted in a more direct and beneficial connection between many of the people's representatives and the details of municipal government. The flagrant instances of lack, of energy and interest in the affairs of the corporation, which were commented upon last year, have been much less common in the year under report.

The octroi schedules of the Azamgarh, Bareilly, and Sultanpur Municipalities were revised during the year.

Modifications were also made in the Roorkee, Kandhla, Tilhar, Shahjahanpur, Saharanpur, and Almora schedules.

The rules for the assessment and collection of octroi duty of the Meerut, Sandíla, Atrauli, Deoband, Sultanpur, Háthras, Dehra and Benares Municipalities were revised, and certain modifications were also made in the rules of the Lucknow and Orai Municipalities.

The refund rules of the Atrauli, Hapur, Deoband, Muzaffarnagar, Orai and Dehra Municipalities were revised, and the rules of the Azamgarh Municipality were modified.

The only entirely new tax imposed during the year was a house-scavenging tax in Haldwani, which had the previous sanction of the Government of India.

In the Naini Tal and Lalitpur Municipalities bye-laws were framed under sections 22 and 23 of Act XV of 1873 for the sale of milk and for the prevention of nuisances.

Under section 55, Act XV of 1883, rules to regulate the following matters were framed in the Municipalities specified below:—

Agra.Bareilly.— To ensure the report of births and deaths.

Allahabad.—For the prevention of nuisances.

Besides the above, rules to regulate the storage of petroleum were passed for 9 Municipalities. Rules of minor importance under this section (55) were made by the Ujháni, Muttra, Najíbabad, Sháhjahánpur, Bareilly, Mainpuri, Farrukhabad, Etáwah, Bijnor, Pilibhít, Amroha, Sambhal, Chandpur, Nagína, Tilhar, Mahrehra, Budaun, Sahaswán, Bilsí, Etah, Bisalpur, Agra and Moradabad Municipalities.

Additions were made during the year to the rules of the Muttra Municipality, issued under the Lodging-House Act (I of 1892).

The election rules of the Allahabad and Moradabad Municipalities were revised during the year.

The boundaries of the Mussoorie, Agra, Pilibhit and Deobard Municipalities were revised during the year.

The income and expenditure and the opening and closing balances of the Municipalities in each division are given below:—

			والماري فالمساحة والأثالات			
Di	vision.	Opening balance.	Income during the year.	Total funds available for disposal.	Total expenditure.	Closing balance.
Meerut	100 111 100 110 100 100	Rs. 2,09,213 1,08,365 1,45,356 1,27,540 2,63,154 21,617 40,241 78,671 54,257	Rs. 8,05,519 7,82,561 5,61,697 10,24,472 6,32,972 1,00,895 1,99,446 5,79,434 1,96,809	Rs. 10,14,782 8,40,926 7,07,053 11,52,012 8,96,126 1,22,512 2,89,587 6,58,105 2,51,066	Ra. 8,15,683 7,44,970 5,28,569 9,57,807 6,24,916 1,05,684 1,99,383 5,58,746 1,96,017	Rs. 1,99,049 95,956 1,78,484 1,94,205 2,71,210 16,828 40,354 99,359 55,049
	Total .	. 10,48,414	48,93,805	58,82,219	47,31,725	11,50,494

The largest balances at the beginning of the year were held by the under-mentioned Municipalities:—

Allahabad		***	411	***	***	26,523
Lucknow	411	***	***	414	111	36,559
Naini Tál	***	144	***	***	***	32,556
Meerut	***	***	414	441	114	54,780
Cawnpore	***	***	***	***	***	62,233
Benares	***	5+4	114	***	114	2,30,517
						Hs.

and the following had the largest credit balances at the close of the year :-

							Es.
Benares		***	130	440		***	2,32.464
Cawnpore	×	411	***	***	***	111	1,04,049
Allahabad		4**	141	***	***	***	40 260
Bareilly		144	***	#10	***	104	38,948
Naini Tál		13.1	***	491	144	114	31,532
Lucknow		***	141	***	***	***	27,141
Mussoorie		217	184	***	•••	***	2 6,201

Notwithstanding large expenditure from current funds on their drainage scheme, the Benares board were able to strengthen their balance by virtue of the great improvement in their octroi receipts. The Cawnpore board gained doubly by the rush of through trade, their terminal taxation falling both on imports and on exports; they need to accumulate a strong surplus in face of the large drainage scheme which they must soon undertake. Meernt reduced its large balance by advance payment of an instalment on a Government loan; its octroi receipts were somewhat less than anticipated. Allahabad and Lucknow have been worked with economy; the former has a number of minor drainage works in prospect, and the latter has never a very adequate surplus for public works.

The income of the Municipalities was derived from the following sources:-

Municipal rates and t	axes	:44	geng geng	***	37,27,629
Realizations under sp		***	***	***	95,170
Revenue derived from		rty and po	wers apart	from	7,17,405
taxation.					4/5
Grants and contribution	ons (for general and	special purp	oses)	***	38,2 4 8
Miscellaneous		•11	***	•••	7,10,463
Loans and other extra	ordinary items	***	111	414	1,44 890
			Total	•••	48,33,805

17. The Municipalities of these Provinces rely for their income chiefly on the proceeds of the octroi tax. This form of taxation was in force, as in the previous year, in 81 Municipalities.

The necessary preparations were made for imposing octroi in Dehra, and it was actually started from 1st April 1900.

The taxes other than octroi in force were:-

					In force in
					Municipalities.

		15		••	

Octroi yielded a total gross income of Rs. 35,19,703 as compared with Rs. 33,57,063 in 1898-99. The total net income realized from this source, after deducting refunds, was Rs. 26,40,766, or 70.8 per cent of the total realizations from municipal rates and taxes, as compared with Rs. 25,76,206, or 71.3 per cent in the previous year. There was thus an increase, in net income from the octroi taxes, of Rs. 64,560. In contrast with the much greater rise under gross receipts, this figure is indicative of the abnormally active character of the year's trade through municipal marts.

The following statement compares the net receipts for the past two years under the different classes of articles on which octroi is levied, and for three proceding years:—

Octroi.	1895-96.	1896-97.	1897-98.	1898-99.	1899-1900.
	Rs.	Rs.	Rs.	Rs.	Ra.

Total	27,86,152	23,11,282	23,56,030	25,76,206	26,40,766

The year was one of high prices, with a poor kharif and an indifferent cane harvest in parts. The tendency in most Municipalities was to reduce consumption and to take advantage of the extraordinarily brisk demand for grain and oilseeds to export from accumulated stocks. A smaller figure of net octroi income would thus have been expected; and the expectation is fulfilled if the statistics for the single Municipality of Agra be excluded from the foregoing table.

The net octroi for the remaining 103 Municipalities aggregated as follows:---

1898-99							${f R}_{f a}$.
	***	***	4+9	***	***		24,19,570
1899-1900	***	1++	***	***	•••	***	23,80 362
					_		
				I	Decrease	•••	39,208

In Agra the great increase (Rs. 1,04,101) was due to honest control of the octroi system after years of mismanagement, and to the payment in the previous year of heavy arrears on account of admitted refund claims.

Agra apart, the octroi income fell off in the Meerut, Agra and Rohilkhand Divisions, rose in the Allahabad, Benares and Gorakhpur Divisions, and was about stationary in Oudh. The decline was most marked and most general in the Meerut Division. It was not in that division the result of any great increase in refunds: the fact apparently being that the centre of trade activity shifted from Meerut, where it had been during the famine of 1896-97, to the southern and eastern parts of the provinces. The change was in accordance with the difference in the localities of demand and supply in the two periods of scarcity. During the famine in these provinces Meerut was comparatively prosperous and was able to collect grain from the Panjáb and export it to the south and east. Last year there was no drain from the Panjab into these provinces; but the eastern districts and Bengal were busy in pouring stores, through the Allahabad and Benares Divisions and the marts of Agra and Cawnpore, into Central India and Rajputána. The above remarks apply primarily to class I of the octroi schedule. Under class II there has been a remarkable increase, especially in the western Municipali-Cattle were sold cheap from the famine tracts, and the prevailing dearness of

grain led to meat being largely used by the poorer classes in substitution for grain food. Under the last three classes of the schedule,—tobacco, cloth and metals,—the falling-off is generally attributed to the high prices and the contracted use of luxuries. The year, moreover, was a less auspicious one for Hindu marriages than its predecessor.

The following figures show the gross imports of the principal articles of consumption and the quantity or value on which refunds were paid:—

,	Article.		Year		(a) Gross imports.	(b) Quantity or value on which refunds were paid.	(c) Net imports upon which the tax was levied.	(d) Percentage of (b) on (a).

The gross imports of grain were swollen by an increase of 15½ lakhs of maunds in the Agra Municipality. The rise otherwise was pretty general to all the divisions except Meerut and Agra. The decrease in imports of other articles has its general cause in the high prices. The great rush of exported grain (37½ lakhs of maunds in all) came mainly from the Agra city (3½ lakhs), the Oudh divisions (14 lakhs), and the Benares and Allahabad Divisions (7½ and 4½ lakhs respectively). The trade in oilseeds with the seaports continued very heavy: and the refunds on this commodity are now so disproportionately high that several Municipalities have removed it from their schedule of taxable articles, and the same step has been urged by the Government on a number of other boards.

The net average consumption of the articles for which standards have been fixed by the Government was as follows:—

				1898-99.	1899-1900.	Normal Government standard.

The incidence of grain has not yet [recovered from the large fall in the previous year. The active export trade in this commodity, which reduced the municipal stocks below a normal level, and the high retail prices prevailing, which drove the poorer classes of the population to cheaper articles of diet, were the all-sufficient factors, however, which retarded this recovery.

The rise in the incidence of drugs and spices was continued despite the circumstances of the year: on the other hand, the incidence of metals showed a serious decrease.

The receipts from taxes other than octroi are compared with those for 1898-99 in the following table:—

Heads of receipt.	1898-99.	1899-1900.	Difference.
(10) Do. servants	79,606 1,18,149 67,519 2,63,579 40,408 53,633 760 1,958 8,666 10,597 749 1,88,769 52,684	Rs. 1,18,532 49,615 1,19,081 1.05,410 2,50,111 47,174 17,135 776 2,182 8,127 10,552 758 2,54,925 62,734 38,205 5,799 413	Rs. —7,527 —29,991 —+932 +37,891 —8,468 —6,766 —36,498 —+16 —+224 —539 … —+15 —+9 +71,156 +10,100 —+365 —142 —+413
m / d	10,36,807	10,86,529	+ 49,722

The assessment and collection of these taxes were, on the whole, well done by the boards: less demands on account of arrears to some extent explain the decreases in the amount realized. The decrease from the visitor's tax was due to the abolition of this tax in Benares during the previous year. The large increase from the terminal tax and tolls at Cawnpore was due to the exceptionally active trade in grain which brought a double harvest to this board.

The total net income derived from taxation by the Municipalities in these Provinces amounted to Rs. 37,27,628 as against Rs. 36,13,023 in the previous year. The incidence of net taxation per head of population within municipal limits was Re. 1-2-6 as compared with Re. 1-1-11 in 1898-99, Re 0-15-8 in 1897-98 and Re. 0-15-6 in 1896-97; indicating the gradual return to prosperity after the distress period. The most heavily taxed Municipalities were—

The better receipts and improved prospects of the year gave the boards a larger margin for expenditure upon necessary and useful public works. On the other hand except at Benares, no new large construction works in connection with water-supply or drainage were undertaken during the year.

The amounts expended in 1899-1900 on water-supply, drainage, and other public works by the boards of Agra, Allahabad, Benares, Cawnpore, Dehra, Lucknow, Meerut, Mussoorie, and Naini Tal wero—

An account of t	ba	1				1	ł		•

An account of the working of water-works and the progress made in the drainage and water-supply schemes in the chief towns is given below:—

Water-Works: Agra.—The average daily consumption of filtered water, including the supply to the cantonment, was close on $1\frac{1}{2}$ million gallons, a very little less than in the previous year. The cost of the water was 1.7 annas per 1,000 gallons supplied, if the calculation be made on the cost of maintenance alone, which rose from Rs. 55,072-12-3 in 1893-99 to Rs. 56,424-6-1 in the year under report. The cost would be 4.6 annas if the charges for interest and repayment of debt were also included; but the payment during the year of an arrear instalment from the previous years makes this figure delusively high. The increased cost of maintenance was fully justified by the measures taken to repair and improve the machinery,—a duty of which the board had been neglectful for some time past. The protection of the intake against impurities was also successfully attended to.

Allahabad.—The quantity of filtered water pumped was 544 million gallons, or 9.15 gallons a day per inhabitant, as compared with 515 million gallons pumped, and a daily average supply per head of 8.04 gallons in 1898-99. The cost per 1,000 gallons, calculated on the working expenses alone, and on these plus interest and sinking fund charges, remained exactly the same, viz., Re. 0-1-6 and Re. 0-4-7, respectively, as in the previous year. These results indicate economy of working; and the improvement of the receipts was due in part to commendable promptitude in collecting the demand. The several stations of the water-works are apparently now in good order, good work having been done during the year in connection with the repairing and cleaning of the boilers, filters, and reservoirs. The supply maintained throughout the year a high standard of purity, and the beteriological test of water taken from all the municipal works failed to detect any sign of the enteric microbe. These results are good and reflect credit upon the Municipal Engineer, whose efforts to check the wastage of filtered water are to be acknowledged.

Benares.—The supply of pure water to the city during the year cost the board close on 1½ lakbs, the larger half of which went towards repayment of the original loan for the works. The current cost of maintenance was reduced from Rs. 68,966 in 1898-99 to Rs. 60,584, although the quantity supplied rose from 853 to 970 million of gallons. The gross cost per 1,000 gallons pumped into the mains was 2.38 annas, against 2.82 in the previous year. The quality of the filtered water was of a high standard, and the board's sanitary officer admits its value in the improvement of the public health. The works have been uniformly well reported on, and are in thoroughly competent hands; but two points in connection with them must receive the board's unremitting attention. The river near the intake must be protected from avoidable pollution, and waste of the filtered water must be suppressed. Measures for securing the former object have been arranged with the approval of Government. The extravagant use of water will also have to be strictly dealt with, the consumption of 12.56 gallons per head of population being unjustifiably high.

Cawmpore.—The amount of filtered water pumped into the mains for the use of the city and cantonments rose from 523 to 547 millions of gallons. The consumption averaged 9·17 gallons per inhabitant—a comparatively high figure, which is explained by the fact that 79 million gallons were supplied to seven large factories for manufacturing purposes. The consumption in the previous year averaged 8·74 gallons per head of population. The cost of the supply came to two annas per 1,000 gallons, calculated on the expenses of maintenance only, or to three annas and seven pies if the payments on account of the loan are included. The corresponding figures for 1898-99 were two annas and one pie, and three annas and nine pies, respectively. The income from the water continues to increase in a satisfactory manner and the extension of house connections is evidence of the popularity of the supply. The quality of the water, as shown by bacteriological tests, has been good; and the board have not been backward in measures to secure it against deterioration. Foremost among these are the river training works, on which the board expended Rs. 15,000 during the year.

Lucknow.—The quantity of water pumped into the mains was 391 million gallons, or almost exactly 4 gallons a day per inhabitant, against 357 million gallons last year. The increased work was done with practically no extra expenditure; and the cost per 1,000 gallons fell to Re. 0-2-1, calculated on the working expenses, or Re. 0-5-2 if the payments on account of the loan be included. The Superintendent of the works deserves credit for the economy practised, as well as for the high standard of purity maintained for the water supply. The bacteriological tests gave satisfactory results throughout the year, and no sign was found of the enterio microbe. Steps are being taken, by charging the filters with Gogra sand and otherwise, to still further ensure purity of the water.

Meerut.—The quantity of water pumped throughout the year was about 166 million gallons; and the cost per thousand gallons was 1.72 annas, calculated on the actual maintenance charges, or 6.24 annas, calculated on the maintenance charges plus the annual write-back for depreciation and the annual instalment of loan repayment and interest. The cantonment is not yet getting all the water which it hopes ultimately to take. The city seems to have got about 4.57 gallons por head of population; and there are only 60 house connections in use in the whole system. The use of well water is reported to be still very prevalent; and the supply seems not yet to have penetrated some of the richer quarters of the town, but the Board hope to remedy this defect. On the whole, the works have been controlled with care and economy; they have been well reported upon by the Sanitary Engineer, and the water has stood all analytical tests in a most satisfactory way.

Mussoorie.—The supply of pipe-water is inadequate, and the board has been requested to arrange for extending the water-supply. The nature of the water-supply of this station was described in the report on municipal taxation and expenditure for the year ending 31st March 1898.

Naini Tal.—The new water-works were formally opened in June 1899, and the pipe supply was in full working order during the greater part of the season. The cost of maintenance was close on Rs. 20,000. The water rate was estimated to give an income of Rs. 20,000 during the year, an estimate that was all but realized. Statistics will be given in future reports of the work done at the pumping station; of the quantity of water pumped; the expenditure of coal per 1,000 gallons supplied, together with the gallonage supplied per head of population. The present report by the board has failed to give this information.

Drainage.—With the completion of the main sewer, the second phase of the drainage works at Benares was reached during the year. A beginning was made with laying branch sewers in the so-called "sewered area," the most densely populated part of the city. The work, which was novel and attended with particular difficulties, had to be done under the direct control of the board's staff, as no reasonable tender for a contract was forthcoming. It was carried out with economy and freedom from accidents. The outlay incurred on original work during the year was Rs. 72,722, met entirely from revenue; no further instalment of the sanctioned loan for the drainage project, the estimates of which have since been reduced considerably to ten lakhs, being taken during the year. The board had a very large surplus at the beginning of the year and was desirous of effecting as much as possible of the drainage works therefrom before incurring turther liabilities. Something was done also towards supplementing the apparatus for cleansing the city, but further conservancy improvements await the progress of the drainage scheme.

In the Cawnpore Municipality the drainage and sewerage scheme was kept steadily in view. The board had the advantage of consulting Mr. Santo Crimp, who visited Cawnpore during the year. The board's proposals for the imposition of a house tax to finance the scheme were received during the year and sanctioned by the Government. The necessary measures towards the imposition of the tax were then also undertaken. Until this systematic scheme for draining and sewering the municipal area is carried through, sanitary reform, despite the board's efforts in other directions, must continue to make slow progress. The health of the city during the year was normal in the sense that there were no epidemics. But the death-rate (51.55 per mille) was extremely high as compared with the municipal average for the Provinces (39.54 in 1899) and with the birth-rate (48.56). The excess is not new; but the local officers regard it as emphasizing the present insanitary and overcrowded state of the city.

Other sanitary improvements.—The minor sanitary improvements carried out by the boards were of an ordinary character. Out of an aggregate income of nearly 59 lakhs including the opening balances, the 104 boards expended nearly 16½

lakhs in water-supply, drainage, conservancy and slaughter-houses. The improvement noticed in the previous year in the sanitary condition of most of the Municipalities was well continued. The measures taken by the boards for the prevention of the spread of the plague were not relaxed during the year.

The total gross liabilities of the Municipalities were Rs. 82,37,834 and the total claims outstanding Rs. 67,770. The net amount of debt was thus Rs. 81,70,064 as against Rs. 84,94,598 in the preceding year.

The grants made to the boards from Provincial and Local Funds for various purposes aggregated Rs. 38,288 as compared with Rs. 38,751 in 1898-99.

The total amount spent by all the boards upon conservancy establishment and plant rose from Rs. 8,51,368 to Rs. 8,69,458. The steady growth of this expenditure marks the efforts made by the boards towards improved sanitation of their towns.

In the matter of education the boards expended a sum of Rs. 1,42,893 upon 569 institutions which imparted instruction to 36,076 pupils. The corresponding figures for the previous year were Rs. 1,42,419 upon 565 institutions and 36,509 pupils. Despite the apparently stationary character of the boards' efforts in the fostering of education within municipal areas, there was a perceptible advance among the majority of the boards in the recognition of their duties towards primary and elementary instruction as opposed to secondary education.

The number of primary successful vaccinations is reported by the boards to have been 116,630 as against 104,732 in 1898-99. The total number of vaccine operations of all kinds is similarly reported as 126,955 as compared with 115,830.

The proportion of persons successfully vaccinated per 1,000 of the population was 37.97 as compared with a proportion of 33.11 protected in the preceding year. In 80 Municipalities there was an increase in the number of successful primary vaccinations and in 24 Municipalities a decrease.

The Vaccination Act is in force in all Municipalities.

The statistics of births and deaths during the past two years, as furnished by the boards' reports, are as under:—

		Year.		Births.	Ratio of births per 1,000 of population.	Deaths.	Ratio of deaths per 1,000 of population.
1898-99 1899-1900	***		 	127,034 158,386	39·27 48·95	110,927 125,419	34·23 38·02

The increased birth-rate reflects the general healthy circumstances of the year. There was no epidemic during the year, but malarial fever was prevalent in several of the towns and is partly accountable for the higher death-rate. The provincial death-rate for 1899 was 33·19; but high figures for the months of April and May were registered in the four great towns of Lucknow, Allahabad, Benares and Agra and increased the rate for municipal areas.

The total amount of the investments held by the boards was Rs. 2,77,954 as compared with Rs. 2,24,751 in the previous year. Of the former sum Rs. 35,434 represent the amount of the invested sale proceeds of nazúl lands.

11.—Towns under Act XX of 1856.

The number of towns under the operation of the Act during the year under report was the same as last year, viz. 329. During 1899-1900 the operation of the Act was withdrawn from Usehat in the Budaun district and was extended to Baragaon-Ferozpur in the Ballia district. The total population of the towns

under the Act amounted to 1,720,088 and the number of houses assessed to 230,138 as compared with 223,041 in the preceding year. The gross yield of the taxation imposed under the Act was Rs. 3,38,140, giving an incidence of three annas one pie per head of population and Re. 1-7-6 per assessed house. The corresponding figures in the previous year were Rs. 3,23,920, three annas, and Re. 1-7-2 respectively. The total income from all sources, including the previous year's balance, was Rs. 4,69,911 and the total expenditure was Rs. 3,86,345, leaving a balance of Rs. 83,566 at the credit of the towns on the 31st March 1900, as compared with Rs. \$1,429 on the 31st March 1899.

12-DISTRICT BOARDS.

There was no change in the number of District Boards and District Committees constituted under Act XIV of 1883, nor was any legislation carried out during the year in regard to these bodies.

The District Boards, numbering 44, were composed of 600 elected, 93 nominated, and 148 ex officio members, of whom 78 were Europeans. The average number of members on each Board was again 20; and the Magistrate of the district continued in every case to hold office as Chairman.

The District Committees, four in number, were composed of 85 members, of whom 32 held their appointments ex officio, the remainder having been appointed by the Government. Twenty-two of the members were Europeans.

Each District Board held, on an average, 11 meetings during the year, at which the average attendance of members was 8.

The average number of meetings held by District Committees was 9, and the average attendance 11.

Accounts.—The actual receipts and charges of the District Board Fund for 1899-1900 are compared below with the budget estimates of the year:—

The financial prosperity noticed in the previous year was well continued in the year under review. The administration of cattle pounds was transferred to the control of District Boards and Committees with effect from the 1st April 1899, and

to this is due the appearance, for the first time in the accounts of these bodies, of the head Police, under which all receipts and charges relating to pounds are classed.

The receipts show a decline of Rs. 1,74,250, as compared with the actuals of 1898-99. This occurred almost wholly under Provincial Rates (—Rs. 3,02,175); minor decreases under the heads Surplus of the Ferry Fund (—Rs. 70,844), and Civil Works (—Rs. 7,172), being counterbalanced by increased receipts under Education (+Rs. 24,497), Medical (+Rs. 10,697), and Scientific and Other Minor Departments (+Rs. 2,906). The decrease under Provincial Rates was due partly to the collection of famine arrears in 1898-99 and partly to the effect of the indifferent kharif harvest of the year on the collections of current demand. The fall in the Ferry Fund surplus was almost entirely owing to the character of the rainfall, which permitted of the rivers being fordable for longer periods of the year than usual.

The expenditure in 1899-1900 exceeded that of 1898-99 by Rs. 3,67,498, chiefly under the heads Civil Works (Rs. 1,15,823), Education (Rs. 78,045), and Medical (Rs. 30,171). Despite the liberal outlay indicated by these figures, the net aggregate balance at credit of the District Board fund was considerably strength-oned by the end of the year.

Contributions aggregating Rs. 5,39,915 were received from the Boards whose funds admitted of their repaying the Government, in some measure, for services still untransferred to the Boards and Committees. The finances of a number of other Boards received assistance from the public funds aggregating Rs. 6,40,203, of which Rs. 43,770 were given after the close of the year to nine Boards, in order to restore their depleted balances.

The results of the year's work in the chief branches of the administration of the Boards and Committees are briefly referred to below:—

Education.—The total number of scholars on the rolls was 398,208, as compared with 352,084 in the previous year.

The increase was common to all divisions, but was largest in the divisions of Gorakhpur and Fyzabad—14,719 and 10,376 respectively.

A satisfactory feature of the year's administration was the general encouragement given to primary education both by starting new schools and by grants-in-aid to existing private schools. There was a noticeable improvement in the Agra, Fyzabad, and Rohilkhand Divisions; and throughout the Provinces generally the Boards have recognised their duties in respect to education, and, by the aid of the increased provision made by the Government in their budgets, they were able to give a distinct impetus thereto during the year.

The general results were, on the whole, good, except in the Lucknow Division, where they are said not to have been encouraging, and in respect of the High Schools in the Fyzabad Division. As regards individual districts, excellent results were obtained in Dehra Dún, Aligarh, Etáwah, Farrukhabad, Gorakhpur, and Basti; in the latter two districts chiefly in respect of the primary sections. On the other hand, the state of education in the Lucknow and Mirzapur districts is unsatisfactory, and in the Pilibhít district it is backward.

The examination results were particularly good in Dehra Dún, Hamírpur and Cawnpore.

The progress of female education during the year was not large. This is, in a great measure, due to the indifference of the people. The experiment of encouraging the attendance of girls up to a certain age at boys' schools has been attended with moderate success. Nevertheless, there are signs thatthe prejudice is weakening, and that the progress, though slow, is sure. To a very great extent the chief obstacle to the spread of female education is the want of an adequate supply of competent school-mistresses.

Physical training received due attention, and interest therein, and in games and athletics, is spreading, as a permanent feature, among the scholars.

Medical.—The total number of patients attending the dispensaries shows an increase of 28,035 as compared with that of the previous year, 3,430,020 as against 3,401,985. The increase was checked to some extent by the sinister rumours that were prevalent in several districts in regard to the hospital treatment of plague patients. There is no reason, however, to believe that the falling off in the attendance where it has been due to the plague scare will be of long continuance. It is gratifying to note the public spirit displayed by Bhaiya Jang Bahádur in constructing the Diamond Jubilee Hospital at Lucknow. The female dispensary at Muzaffarnagar was presented with certain instruments, to the value of Rs. 100, by the liberality of two ladies, the widows of the late Baldeo Sahai of that district. Apart from these instances, however, the reports are silent as to examples of individual help; but, on the whole, the general public contributed in larger measure, in the way of subscriptions, to the support of dispensaries.

Vaccination.—The work of this department appears to be steadily gaining in popularity. Private assistance was freely given in several districts. Some opposition was, however, still experienced in the matter of the vaccination of young children from the Bráhmans and Thákurs of certain villages of the Fyzabad Division, and from Bráhmans in the Bánda district, and the people of the Tarái and Bhábar continue to maintain a hostile attitude.

There seems to have been a substantial increase in all divisions, except Fyzabad, in the number of operations performed and in the percentage of successful cases.

Pullic Works.—Although the more important projects are, as a rule, carried out by the Public Works Department at the cost of the Local Funds, the District Boards repair all unmetalled roads, and construct and repair all buildings the cost of which falls below Rs. 1,000. Adequate supervision seems generally to have been exercised in regard to works of this nature.

The Boards should delegate the responsibility for local works to the Local Boards, and so stimulate interest on the part of the latter bodies.

Arboriculture.—The unfavourable character of the rainfall interfered with the maintenance and extension of roadside avenues, to which the arboricultural operations of District Boards are mainly confined. Endeavours continued to be made to enlist the assistance of zamindars and others by giving them a proprietary right, subject to certain restrictions, in the roadside trees planted by them. The system appears to be gradually growing in popularity. In the Agra Division Sundar Singh, zamindar of Isoli, and the Raja of Awa are reported to have planted considerable numbers of trees during the year; while in Bareilly Thakur Lakhan Singh, Rai Bahadur, and Lala Nand Ram of Shahjahanpur, and Lala Bhagwan Das in Pilibhit, were also prominent in this matter of the planting of trees and avenues.

Testing of vital statistics.—This work was generally carried out with care in the Meerut, Agra, Benares, and Fyzabad Divisions, and in the districts of Allahabad, Jhánsi, and Jalaun in the Allahabad Division.

There is still much room for efforts on the part of the non-official members to check the registration of these statistics, in the neighbourhood, at any rate, of their own homes.

Civil Veterinary Department.—In the districts in which veterinary assistants are employed much good work resulted in connection with cattle disease, which appears to have been largely prevalent, especially in the Allahabad Division. Nearly all the Boards have now qualified veterinary assistants in their employ, and are evincing a greater interest in the question of the breeding of horses and cattle than formerly. The reports show also that the operations of the assistants are generally appreciated and their services sought for by the people.

Sanitation.—The action taken by District Boards under the Village Sanitation Act seems, as a rule, to have been exceedingly restricted. In many districts the allotments placed at the disposal of the Boards for the purposes of the Act are reported to have either remained unspent or to have been only partially utilized.

In the Rohilkhand Division the money allotted to the Boards was more or less fully utilized; the Basti Board also is reported to have made full and judicious use of its allotment under this head.

The record of the year's work was one of genuine progress. The work was effected to a considerable extent by official agency; nevertheless, an increasing amount of assistance was rendered by individual members of District Boards, although the non-official members generally of the Boards in the Rohilkhand, Benares, and Allahabad Divisions took little interest in matters of local administration. The attendance at the meetings of the District Boards in the Agra and Benares Divisions and in the Aligarh district appears to have been far from satisfactory.

The members of the Dehra Dún, Meerut, and Muzaffarnagar District Boards, however, showed commendable zeal in the discharge of their duties, and in almost every district of the Fyzabad Division there are signs of increasing interest on the part of non-official members. The names of a large number of gentlemen have been brought to the notice of the Government for their public spirit generally or for the service rendered by them in one or more of the branches of the Board's administration.

13.-MILITARY.

Volunteer Movement.

The question of the constitution of the left wing of the 4th Administrative Battalion, into a separate corps, which was referred to in last year's report, has merged into the question of the abolition of Administrative Battalions, on which question the views of the Local Government were communicated to the Government of India after the close of the year.

The number of corps remained the same as in the year preceding. There was a slight rise in the total strength of the active force, viz., 4,378 against 4,326 in 1898-99. The percentage of extra efficients in the infantry fell from 74.9 to 72.2 in 1899-1900, while the percentage in the cavalry rose very slightly from 83.5 in 1898-99 to 34,369-6-10 84.6 in 1899-1900.

The number of marksmen in both branches was 390 against 409 in 1898-99.

The strength of the Reserve Force fell from 474 to 409, while the percentage of efficients rose from 77 in 1898-99 to 79 in the year under report.

The financial condition of all corps was satisfactory, and the year closed with a credit balance of Rs. 34,369-6-10.

The following table exhibits in detail the statistics of the year:

CHAPTER IV.

PRODUCTION AND DISTRIBUTION.

MISCELLANEOUS.

1.—Village records.

Establishment.—The following table shows the establishment under the control of the Land Records Department during the year under report as compared with that of the preceding year:—

Inspectors' peons	104	***		6	6

Adequate accommodation for patwári papers having been provided in Agra, an assistant record-keeper was appointed there. One supervisor kanúngo temporarily entertained in Budaun seven years ago was made permanent and three more supervisors with three chainmen were sanctioned for the same district. Four assistant teachers were added to the patwári school establishments in the Gorakhpur, Etah and Gházipur districts. The decrease in the number of patwáris and assistants is due to the revision of patwáris circles in certain districts.

Thirty kanungos officiated during the year as Naib Tahsıldars, and four were selected as approved candidates for the post, but the inferiority of most of the men is a bar to their promotion. The reorganisation of the staff of kanungo inspectors has been sanctioned, and the numbers will be reduced and the pay of those remaining increased as vacancies occur.

A further advance was made towards meeting the wishes of the Government of India that the Land Record staff should be employed on special agricultural enquiries. A set of questions on matters connected with the cultivation of sugarcane was circulated to most districts for report by selected supervisor kanungos; the replies received were naturally of unequal value, but some of them were very useful.

Revision of patwaris circles and salaries.—During the year under report an estimate was submitted to the Board of Revenue of the number of circles required and the increased expenditure needed to improve the position of patwaris in Oudh. The number of patwaris and assistants estimated is 7,838 against the present number 8,262 but the improvement in pay will involve an extra expenditure of about Rs. 50,000 per annum. Detailed proposals for the revision of circles in the Hardoi and Lucknow districts have since the close of the year been submitted for the orders of the Board of Revenue, while those for the Sitapur, Sultanpur and Bara Banki districts are in course of submission. In the North-Western Provinces, Government has sanctioned the final re-arrangement of patwari circles and salaries in Basti and Budaun at an increased cost of Rs. 654 and Rs. 88 per mensem, respectively. To mitigate undeserved hardship to patwaris whose

pay has been permanently reduced, personal allowances have been granted to the extent of Rs. 11 per mensem in Basti, Rs. 69 in Budaun, and Rs. 186 in Bijnor. Twenty-six patwaris were promoted to higher posts in the department during the year.

Kanúngo examination.—The annual examination of kanúngos was held as usual during the rainy season. Out of 234 men who appeared for the examination only 37 passed in all subjects and 194 in part. Of the number of successful candidates, nine have not yet received practical training in surveying, and will be required to join a survey party; on the other hand, 281 candidates from several districts were attached to survey parties for instruction, and the majority succeeded in obtaining certificates of proficiency in practical work. There has been no improvement in the stamp of the candidates for kanúngoships, and the Director has proposed amendments in the rules to ensure that all supervisor kanúngos shall ultimately pass through the Agricultural School.

Patwari Schools.—Continued progress has been made in the training of patwáris and their assistants, and in districts where survey operations have begun, the schools are closed and teachers and pupils receive practical training in the field. A higher standard of efficiency is now required of patwaris, and the steps taken to train them in practical surveying are specially satisfactory. One thousand seven hundred and twenty men against 1,583 in the previous year attended the classes, of whom 1,418 qualified. The attendance at the patwari schools this year has increased to 3,499 from 3,241 in 1897-98. Of those who attended 1,382 or 39.5 per cent. passed the examination against 25.21 per cent. in the preceding year. The system of simultaneous examination introduced in 1897-98 to raise the standard of patwaris' training and to secure uniformity of their qualifications has worked satisfactorily, and the teachers and students now know the standard for which they have to work. The percentage of passed patwaris exceeds 95 in 7 districts, is between 90 and 95 in 11, and falls below 70 in one (Allahabad) only, where the Collector is taking steps to have the old unpassed men replaced by their heirs. The total receipts from fees and fines amounted to Rs. 13,120 and the total expenditure on the schools. to Rs. 14,829, leaving a deficit of Rs. 1,709.

Residence of patwaris.—During the year under report definite instructions were issued as to the principle to be followed in securing residence. The percentage of resident patwaris has risen from 73.03, to 73.18 that of exemptions from residence has fallen from 14.67 to 13.79, while that of non-residents has, chiefly owing to withdrawal of exemptions, risen from 12.30 to 13.03.

Filing of patwaris' papers.—Of the total number of comparative area statements, 86.63 per cent. were filed in time against 84.52 per cent. in the preceding year. Of the kharif crop statements 87.26 per cent., of rabi crop statements 92.66 per cent, and of jamabandis 78.51 per cent. were filed with punctuality against 85.75, 93.40, and 79.68 per cent. respectively, filed in the previous year. All' the crop and area statements were filed on or before due date in Muzaffarnagar, Jalaun, Mirzapur and Basti and all the jamabandis in Etawah, Ballia, Basti, Lucknow, Gonda and Partábgarh.

Result of testing papers.—Kanúngos tested 5,776,801 fields or 7.85 per cent. against 7.77 per cent. in 1897-98. Superior officers tested in all 690,732 fields of which 184,111 had been previously tested by kanúngos. The corresponding numbers last year were 602,419 and 171,773 respectively. The total number of rent-roll entries tested rose from 149,023 in 1897-98 to 169,083 in 1898-99. It is now a general rule that one-third of the circles in each district come each year under the inspection of superior officers; this arrangement has been duly carried out in most districts, except where inspection has been more or less interrupted by settlement and survey operations.

Inspection of districts.—The Kanungo Inspectors attached to the department inspected the work of patwaris and kanungos in 10 districts during the year, and

their reports were, as usual, forwarded to the district officers for information and necessary action. The Director himself inspected the work of the preparation of Mauza Registers, Pargana Books, and Pargana Hand Books in Gorakhpur and Basti. He also made inspections of survey and record work in Meerut, Farukhabad, Bareilly, Pilibhít, Azamgarh, Kheri and Gonda. General land record work was inspected in Etáwah, Mainpuri and Etah.

Preparation of districts for settlement.—The Director examined the districts of Jalaun, Etah, Etawah and Mainpuri and submitted the usual preliminary reports on the condition of village records and the probable financial results of a revision of settlement. The condition of the maps in Agra, Muttra and Jalaun was reported on by the Superintendent of Surveys. The revision of village maps and records was during the year completed in the districts of Bareilly and Kheri and the hill parganas of Naini Tal, continued in Gonda and commenced in Farukhabad, Azamgarh and Pilibhit. The total area surveyed was 3,312 square miles, the number of villages and fields being 4,376 and 4,188,497 respectively. Of these the record writing in the field was completed of 4,338 villages containing 3,990,914 fields.

Tahsil Registers.—Revised village registers are now complete for seventeen districts, and all pargana hand-books have been published for six of these, the rest being in course of compilation or publication. The special staff attached to the Department has now practically completed the first part of the programme laid down for it on its establishment, all that remains is the completion of work in the Gurserai estate of Jhánsi, and the preparation of hand-books for that district. The Board of Revenue have passed orders as to the districts which are to be taken up next. The value of the village registers, whether in the old form or the new, becomes clearer as time goes on; but there is still in some places a tendency to omit the record of matters that should find a place. Instructions have been issued during the year explaining the method in which these records should be systematically used, and the results reported annually to the Director.

Maintenance of survey and boundary marks.—Under G. G. O. No. 510-19 dated 10th March 1892, annual lists of survey and boundary marks were prepared in all the districts of the United Provinces except in some tahsils of districts under survey or settlement. The marks were also inspected and necessary steps taken for their repairs or re-erection. The standard pattern of stone trijunction mark mentioned in the last year's report is now being generally used. The reports received show that in some districts ruined masonry platforms have already been replaced by stone pillars, while in many others stones have been ordered and will be set up when received.

Amendment to rules.—Instructions were issued during the year clearing certain doubtful points connected with the record of the rights of lessees and mortgagees of proprietary rights. The system under which patwaris registered brood mares and their produce has been abolished. Patwaris have been ordered to render all reasonable assistance to the officers of the Public Works Dapartment in maintaining correct plans and registers of land in their charge. Instructions have also been issued as to the duties of patwaris and kanungos in the matter of reporting encroachments on Nazul or Government property. The question of recording Government Properties has been under consideration for some time past; Government has now issued orders and the kanungo rules on the subject are being revised. The draft rules for patwaris in the hill tracts of the Kumaun Division as well as for the whole Bhabar tract noticed in the last year's report are now under the consideration of the local authorities. In the North-Western Provinces' Rules for Survey Procedure necessary amendments have been made consequent on the omission of the rough khatauni from the list of papers to be prepared by Survey Officers. Some minor amendments have also been sanctioned in these rules.

Supply of patwari and kanungo forms.—The total expenditure on patwari and kanungo forms during the year amounted to Rs. 65,655 against Rs. 68,463, in 1897-98. The decrease is mainly due to a change in the dates of payment.

2.--Fairs.

Only four agricultural shows were held during the year under report, viz Kakora, Bulandshahr, Muzaffarnagar and Meerut. The last two shows were attended by the Assistant Director of the Agricultural Department, and in the first two the Department was represented by other officials. The Assistant Director as usual presided over all the Agricultural Committees at the fairs attended by him and awarded prizes to agricultural exhibits. It was interesting to notice that at Muzaffarnagar most of the samples of the refined sugar known as khand had been freely adulterated with powdered beet or Mauritius sugar in order to improve their. general appearance. Similarly a few samples of shakkar (raw sugar) appeared to have been adulterated with bura (a form of native refined sugar). All adulterated samples were carefully discarded by the Assistant Director, who in his note to the Collector, suggested that necessary measures should be taken to stop such specimens being admitted in the show room. At the Meerut show, the samples of agricultural produce were not as numerous as might have been expected, and only 63 head of cattle were exhibited as compared with 72 in the preceding year. At Muzaffarnagar, the number of cattle exhibited during the year exceeded that of the last year by 93; but there was no noticeable improvement in the quality of animals except perhaps with regard to buffaloes. The plough cattle were particularly poor.

3.—Departmental Agricultural Journal.

The circulation of the Journal shows a slight increase, but the paper cannot yet be said to be popular. The total receipts from subscriptions during the year under report amounted to Rs. 158-10-0 against Rs. 169-8-0 realised in the last year, the decrease being due mainly to the fact that back numbers of the journal were not sold so largely as in the past year.

4.—Forecast of Crops.

There is little to add to what has been said in the last year's report regarding the reports on crops, which are compiled and issued by the Agricultural Department. Under orders received from the Statistical Bureau of the Government of India the sugarcane crop has been added to the list of crops on the prospects of which the Agricultural Department issues periodical forecasts.

5.—Exhibitions. Nil.

6.—Cawnpore Experimental Farm.

The experiments conducted at this farm have been fully discussed in the separate report submitted to Government and are therefore not described here. The work has now been thoroughly systematized and the working plan will shortly be published. The Agricultural Department has been devoting special attention to seed distribution for the last three years with the result that there has been a marked improvement in the seed business. Besides the large stocks of seeds kept for distribution at the Government Experimental Farm at Cawnpore, the Department has established a small seed depôt in Partábgarh with the approval of the Local Government which has advanced funds for carrying it out. A beginning was made by the distribution of selected and cleaned seed for the rabi and the results must be wasited before it can be said whether the schome is a success.

7.—Demonstration Farm, Meerut.

The method of management and the nature of the experiments carried out at this farm have undergone no alteration during the year. Experiments with kharif crops were carried on in 18 plots and with rabi crops in 49 plots, aggregating 8½ acres, the remaining area having been devoted to profitable farming. Some of the experiments are on lines similar to those at Cawnpore; and the results of the past year agree generally in the two places. The Chicago Aermotor, referred to in last year's report, continues to attract much attention from the zamindárs and cultivators of the neighbourhood. The stud attached to the farm now consists of an Arab stallion, two donkeys, three bulls of different varieties, a Tejpur ram, a Kashmir goat and a Hissar buffalo. It is much appreciated by the breeders and a distinct improvement in the quality of the stock bred in the Farm neighbourhood is now noticeable.

8.—Enclosure of waste lands.

The work done during the year at the usar reserves may be summarised as follows:—

Juhi.—As a result of enclosure and restriction of grazing, the natural vegetation has been been improving steadily year after year. The commonest grass now is chloris tetrastachya, which during the last few years has ousted the typical usar grass (Sporobelus pallidus) to a considerable extent. Among the better grasses Andropogan annulatus has established itself to a greater extent than others that have been tried. A certain amount of standing grass is sold every year to grass-cutters of the Cawnpore city. Eleven acres of grass were sold for Rs. 33 during the year under report. The yield of hay amounted to 40 maunds per acre. Reclamation of the land is carried on to a limited extent by deep tillage and manuring, but chiefly by planting and sowing trees. The area reclaimed by the first method is usually devoted to the cultivation of cereals and other crops. The results have so far shown that by thoroughly breaking and pulverizing the land by tillage and with manure and irrigation ordinary grain or fodder crops can be produced.

Greater attention is paid to the question of planting fuel yielding and hardy timber trees, chiefly babul (Acacia arabica), dhak (Butea frondosa) nim(Melia-indica) and shisham (Dalbergia sissu). All attempts to grow these trees by sowing the seed broadcast or on ridges and in trenches or in thalas only one or two feet deep have completely failed; but planting according to the method referred to in previous reports as the deep thala system has been so far successful. Over 500 trees were planted under the above system during the year. Mahua failed last year because good seedlings could not be obtained, but the trees planted this year are more promising. Among the fruit trees guavas and jamun (Eugenia jumbolana) have done best, and a great variety of fruit trees has been planted during the year in order to see which of them are the most suitable for cultivation on land of this type. Of the 20 Eucalyptus trees planted last year, only five have survived: the tanning trees referred to in the previous year's report are all in healthy condition. The plantation of Agave as a hedge was extended during the year.

Gursiltran.—The total cultivated land amounts to about 97 acres of which 15 acres were under direct management during the year under report, and the rest leased to tenants at a rental of Rs. 486-3-0. Muzaffarnagar wheat was the principal crop in the plots held in direct management. Juar and Sugar Sorghum were sown in the kharif, but owing to deficient rainfall the crops were far from luxuriant. The growth of the natural grass on the usar in general has been somewhat poorer than in the previous year owing to deficiency of rainfall. The seed of the Australian grass Eragrostis fulcata referred to in the last year's report was again tried during the year in a small plot of usar but failed to germinate. The superior grasses continued their progress. No attempt was made during the year to grow habul and

dhak by sowing the seed broad cast or on ridges, as these systems had repeatedly failed in previous years, but over 500 trees of different species were planted on the "deep thala" system in holes four feet deep refilled with imported earth. All those trees are doing very well. The trees planted last year under the same system except those of mahua, are also in a flourishing condition; but the condition of the trees planted in 1897 in holes refilled with the usar earth that was dug out of them is unsatisfactory. In the past year five babul trees were planted in thalas tilled with usar earth mixed with gypsum. Out of these one died and the remaining four are in good condition. The trees of jait (Sesbania aegyptiaca) and dhak (Buteau frondosa) are doing very well. Date palms are getting on slowly as usual. The guava plantation has been further extended by planting 23 trees under the deepthala system during the year. In the experiments with ensilage the best quality of silage was obtained, as in preceding years, by mixing chopped juar with the usar grass before pitting it in the sile. The usar grass, to which salt at the rate of one pound to the maund was added before pitting, gave ensilage which was more relished by cattle than what was made without the admixture of salt.

(3) Abbaspur.—The area of the reserve at Abbaspur consists of 88 acres, the purchase of which has now been completed for Rs. 314-10-0. The soil at this reserve is a typical specimen of the usar which occurs commonly in South Oudh, containing a considerable quantity of soda salts. Altogether 1,416 trees were planted during the rains of 1898; and they are all alive and showing vigorous growth. They were watered regularly until the beginning of the rains in June 1899, the earth round them was frequently stirred and a little manure applied to its surface. During the rains they were left to their own resources. A small area was sown broadcast but the results were as unsuccessful as they have been in other reserves except on isolated patches of comparatively good land. A sum of Rs. 3,000 was given by the Government of India as a special grant during the year under report in order to extend the operations at this reserve. With this money besides the funds available: in the budget of this Department planting of babul on an extensive scale was carried out during the year under report, 6,000 thalas having been planted. The young trees in these thalas were at the close of the year as promising as could be expected; the trees planted early in the rainy season were naturally more vigorous than those planted towards its close. They will receive the sametreatment as was given last year.

9.—Selection and distribution of wheat seed.

The total quantity of wheat distributed during the year amounted 58,181, lbs.. In addition to the indents for wheat received from within the country, one indent for 5,125 lbs. of wheat seed came from Burmah and another from the Khedevial agricultural society of Egypt.

10.—Ploughing fair:

In the ploughing competitions held at the agricultural shows, the first prize was invariably carried off by the Watt's plough, and the work done by the Meston plough received general approbation.

11.—Boring apparatus.

During the year under report 83 trial borings prior to sinking wells were made in 14 districts against 131, borings done in 16 districts in the previous year. The decrease in the number of borings was not due to any slackness in the demand for boring tools which was as brisk as before. A number of these borings had to be taken in places where the strata happened to be rather hard, and consequently took a longer time than usual; and much loss of time was caused by the necessity for constant repairs to the old and worn out sets of tools. Two new sets were purchased during the year. The staff of well sinkers remained the same as last year.

The total expenditure incurred in well experiments, including the cost of new tools during the year, amounted to Rs. 1,278-9-8 against Rs. 1,344-1-4 expended last year.

12.—The Lucknow Museum.

Six hundred and fourteen specimens were added to the Museum collections during the year. The additions to the epigraphical and archæological sections, though not numerous, were individually important. The art ware depôt is reported to have maintained its popularity and was conducted at a small profit.

The number of visitors to the Museum showed a slight falling off, which is explained by the fact that the buildings were closed for cleaning on one day in a week. The expenditure was kept within the allotment provided in the budget.

13.—Saharanpur Botanical Garden.

The season was very unfavourable for planting and the demand for most classes of plants naturally fell off. The demand for seeds, however, showed a continued increase. The yield of drugs was good and all the indents of the Military Department were complied with in full. The crops of fruit were only moderate except in the case of the vines, for which the dry season proved suitable. The date palms continue to progress, but the quantity of fruit yielded is not yet satisfactory, and endeavour is being made to effect improvement. Experiments are being tried with many varieties of imported fruit trees, but it is too early to pronounce on their suitability for this country, except perhaps in the case of the persimmon. An endeavour has been made to propagate mangoes by budding instead of by grafting, and interesting results have been obtained.

In the vegetable farm, the operations were mainly directed to raising acclimatized seed, but the trial of new varieties was not lost sight of. The stock of flowers and ornamental plants was well maintained, but the demand for some kinds was in excess of the possible supply. Collections of economic or scientific interest have been supplied to the Reporter on Economic Products, and to investigators in various parts of the world.

The financial results of the year's work were again very good, the receipts covering all expenditure and leaving a satisfactory surplus.

14.—Horticultural Gardens, Lucknow.

The early part of the season was favourable to the fruit crop, but the weather from June to October was most abnormal. The crops were almost all good, and in some cases excellent. The marked docrease in the number of fruit trees distributed was due to the unfavourable nature of the season for planting. The demand for vegetable seeds and for the higher classes of plants continued to increase, while that for flower seeds remained steady.

The office accommodation has long been insufficient, and a project was sanctioned during the year for the provision of suitable buildings. It is still difficult to secure the proper type of apprentices for training, and applications for skilled gardeners cannot generally be complied with.

The cash receipts of the garden from sale of produce amounted to Rs. 16,353 and the expenditure to Rs. 16,457:

15. -Arboriculture.

The length of new avenues planted during the year was 175 miles on local, and 37 miles on provincial roads, making the total 7,085 and 1,694 miles respectively. The attempts to encourage private persons to plant trees along the roads have met with gratifying success in many districts, and the progress would have been even greater but for the very unfavourable character of the season.

The total receipts of arboriculture amounted to Rs. 84,988, and expenditure to Rs. 89,914 against Rs. 84,587 and Rs. 81,346 respectively in the preceding year. Most of the income is derived from the sale of roadside grass, but this source is still neglected in some districts.

16.—Sericulture. Nil.

17.—Promotion of horse-breeding operations through Civil Agency.

Veterinary-Major R. H. Ringe held charge of the Civil Veterinary Department throughout the year, except for six weeks when he was on privilege leave, and Veterinary-Lieutenant A. Smith, Superintendent, Civil Veterinary Department, South Punjáb, held charge in addition to his other duties. He submitted three reports on the work of his Department as usual, inspected the imperial and provincial stallions at the various stands in these provinces, visited the Saháranpur-Rájpur and Kathgodam-Naini Tal dâk lines, attended six fairs and proceeded to Bombay for the purchase of stallions for the Provincial Government. He also inspected cases of glanders at Benares and Sardhana and visited Tilhar, Roorkee, Cawnpore, Mogal Sarai and Chola railway stations for the inspection of trucks of livestock.

Horse-breeding.—The number of imperial horse stallions allotted to the provinces rose during the year form 78 to 82 and of the provincial horse stallions from 61 to 72. Of these 68 imperial and 62 provincial stallions were at stud work and they respectively covered 3,525 and 3,220 mares during the year as compared with 3,290 and 3,047 mares covered by 67 imperial and 56 provincial stallions in the preceding year. Besides these there are 12 other stallions, four of which are owned by estates under the Court of Wards and eight by private gentlemen. Out of the twelve stallions, nine are reported to have covered 92 mares, while information about the remaining three stallions is wanting. The provincial stallions are reported to be increasing in popularity as their value becomes more apparent.

Mule-breeding.—The imperial donkey stallions allotted to the provinces during the year were 99 of which 88 were at stud work, they covered 4,379 mares as compared with 4,354 in the preceding year. There was no change in the number of provincial donkey stallions at stud work, and no fresh applications were received. The information as to number of coverings and produce is quite incomplete, the returns having been received from only one out of nine Court of Wards' Estates. The scheme for encouraging mule-breeding by the free issue of cast mares has made a beginning, 15 mares having been issued during the year. Landowners are very anxious to obtain mares for this purpose and no less than 1,240 applications for cast mares have been received.

Cattle disease.—The returns of cattle disease are still incomplete and do not show the whole loss caused to agriculturists, but the amount they show is sufficiently serious. The reported deaths are from rinderpest 35,361, from anthrax 2,219, and from foot-and-mouth disease 2,844. There were 63 cases of surra during the year, of which 43 occurred on the Saharanpur-Rajpur dak line. A few cases of glanders were reported from different parts of the provinces; but in Benarcs only, where out of 39 suspected cases 23 died or were destroyed, was the outbreak serious.

Treatment of cattle disease.—The number of Veterinary Assistants rose again from 27 in the preceding year to 33 during the year under report. Proposals for the organization of the subordinate Veterinary Department have been recently made and sanctioned and should result in much greater efficiency. At present isolation and disinfection are the only known remedies for rinderpest, but the experiment of inoculation or vaccination was carried out on a small scale during the year with

satisfactory results. A veterinary dispensary has been started by the Muzaffarnagar District Board and it is hoped that this example will be followed by other districts.

18.—Experiments in dairying.

Nil.

19.—Manufacture.

Nil.

FORESTS.

Areas.—The areas of the different classes of forests at the commencement and close of the year were as follows:—

			Reserved	l forests	Protecte	d forests.	District fore	protected ests.	Unclassed forests		
	Circle.		1st July 1899.	30th June 1900.	1st July 1899.	30th June 1900.	1st July 1899.	30th June 1900.	lst July 1899.	30th June 1900.	
			Sq ms.	5q, ms.	Sq. ms	Sq. ms	Sq. ms.	Sq. ms.	Sq. ms.	Sq me.	
Central	•••	***	1,838	1,870	30	30	9,176	9,168	30	30	
Oudh	***	***	1,298	1,310			٠				
School	***	4**	* 869	* 869					13	13	
	Total	.,,	4,005	4,049	30	30	9,176	9,168	43	43	

* Inclusive of 152 square miles leased forest.

The increase in the area of reserved forests is for the most part accounted for as follows:—

- (i) In the Central Circle, by the reservation of eight square miles of district protected forest in the Naini Tal Division, and of five blocks of *khair* forest in the Kumaun Division.
- (ii) In the Oudh Circle, by rectification of areas and by the reservation of a portion of the area received in 1893 from the Khairigarh estate in exchange for forest.

The areas in the School Circle remain unchanged.

Forest settlements.—In the Central Circle, in addition to 28 square miles of forest, which were under settlement last year, and which have been finally constitued reserves, the settlement of the Sarda islands in the Almora district and the Papidanda tract in Garhwal was undertaken and completed during the year. Both these tracts were gazetted free of rights. In the Oudh Circle the villages received from the Khairigarh estate other than those made over for management to the Revenue Department have also since the close of the year, been gazetted as reserved forests free of rights.

Demarcation.—Of the 66 miles remaining at the close of the year to be demarcated in the Central Circle, 19 miles consisted of boundaries of lately acquired reserves in the Naini Tal Division. These have since been demarcated and steps have also been taken to improve the existing boundaries, where defective, signboards being erected when necessary. A commencement has been made in demarcating a few of the more valuable of the protected forests in Garhwal. In the Oudh Circle only 43 miles of boundary remain to be demarcated. The settlement of a troublesome boundary dispute on the Kauriala river in Bahraich was

concluded, and steps will now be taken to demarcate the boundary agreed on. In the Jaunear Division of the School Circle, 18 miles of ditches were dug to define the boundary exactly between pillars already standing, leaving 73 miles of similar work to be completed. The total expenditure on demarcation amounted to Rs. 3,536 in the Central Circle, Rs. 4,693 in the Oudh Circle, where the work is often of a specially difficult nature, and Rs. 1,884 in the School Circle.

Surveys.—Comparatively little survey work was done during the year. Forty-four square miles of recently acquired forests remain to be surveyed in the Naini Tal Division. In other Divisions of the Central Circle, various local surveys of minor importance were carried out. In the Oudh Circle 15 linear miles were traversed along the Nepál-Kheri boundary. In the School Circle existing maps were brought up to date, in connection with the revision of the Jaunsár working-plan.

Working-Plans.—The working-plan for the Tulsipur forests in Gonda was completed during the year, but has not yet, owing to the non-receipt of the map from the Survey Department, been submitted to Government for sanction. A new plan for the trans-Sárda forests, Kheri, has also been taken in hand, and is expected to be completed during the current year. The Pilibhít working-plan awaits the completion of arrangements as to the manner in which concessions are to be dealt with. In the School Circle the working-plan of the Saháranpur district was revised and sanction was accorded to a revised working-plan of the leased chir forests. The Deputy Conservator was engaged throughout the year on a new plan for all the Government forests in Jaunsár, which is reported to be nearly complete.

In the Central Circle an area of 81 square miles of reserved forest, chiefly in the Naini Tal Division, and consisting of a number of comparatively small blocks reserved in recent years, remains to be brought under the provisions of a working-plan.

The provisions of existing plans have been followed, except where special circumstances—generally the absence of a demand for the produce—rendered some departure from the accepted programme necessary. In the Central Circle such deviations were numerous.

Communications and Buildings.—The following table shows the expenditure incurred under this head:—

ture incurred	111102	page poste						
		Roads and	bridges.	Build	inga.		1	Percentage
Circle.	ļ	New works.	Repairs.	New works.	Repairs.	Other works.	Total,	on gross expendi- ture.

District Protected	Forests	966	237	1,188	549		2,940	16.4

One hundred and twenty-six miles of new roads were constructed during the year, and 4,091 miles of roads already existing were repaired.

The expenditure as compared with the previous year has risen under all heads both for new works and repairs; but the increase is most marked under the head of "New buildings," on which the outlay has risen from Rs. 17,343 to Rs. 31,655.

This increase would appear to be, to a great extent, due to the measures taken to improve the accommodation for the subordinate forest staff—a matter which appears from the list of works given to have received attention in all circles.

The expenditure on roads was chiefly in maintenance and, in a few cases, on extensions, no large projects for opening up communications being undertaken during the year. Since the close of the year the sanction of the Government of India has been accorded to the making of an important road in Jaunsar, which passes for some miles through native territory, and in the Central Circle the alignment of a road has been completed for opening out the forests of the Kalaunia valley.

Breaches of Forest Law.—The results of the year are compared with those of 1898-99 in the following statement:—

The total number of cases taken into court by the Forest Department is higher than it has been for several years, a decrease in the School Circle, in which there were very few prosecutions, being more than counterbalanced by increases in the other two circles.

The number of persons involved increased from 209 to 321. The proportion of convictions obtained has, however, fallen from 89 to 79 per cent., the results of prosecutions in all circles being somewhat less satisfactory than in the preceding year. In the Central Circle the failure of prosecutions occurred chiefly in cases of injury to forest by fire in the Naini Tal Division—a class of case in which it is frequently difficult to detect the offender. In the Oudh Circle the increase of cases occurred chiefly in Bahraich. In the School Circle the proportion of acquittals is high owing partly to the failure of the prosecutions in some boundary cases, which possibly should not have been taken into court.

The number of cases compounded has increased from 445 to 483, and there has been a further decrease in the average amount of compensation taken per person. In the Bundelkhand Division of the Central Circle, the power of compounding offences is not exercised so much as elsewhere, because among a poor people prosecutions are regarded as a more effectual deterrent than mere fines, and also because there is difficulty in the large and scattered forests of that part of exercising due

control over subordinates. Many of the prosecutions of this Division are evidently of a very petty character and if the danger of abuse of power by subordinates can be guarded against, the poverty of the people is a reason for allowing compensation on easier terms than elsewhere. The procedure followed in this Division is being further enquired into.

In the district forests of Kumaun the number of prosecutions fell from 120 to 103; but out of 369 persons brought to trial, no less than 113 or nearly one-third were acquitted. Offences were compounded in the case of a much larger number of persons than in the previous year, and the average amount of compensation accepted was considerably less.

The appended table classifies the new cases of the year under the various heads of offences:—

	C	ases t	aken i u <i>rt</i> .	into	Ca	505 CC	mpou	nded	Ся	.505 u	udete	oted.		Tota	ıl onse	g,	T

(D)															<u> </u>		ı

The number of undetected cases of injury to the forests by fire rose from 74 to 94, the increase being entirely in the Oudh Circle, where the Pilibhit Division, in which attempts to injure the forests have always been numerous, accounts for 56. The undetected cases in the district forests appear all to have been of a petty kind.

Protection from fire.—The results of the measures taken to protect the forests from fire, the percentage of failures, and the costs incurred are shown in the following table:—

Circle.	Total aren of circle.	Area attempted to be protected.	Percentuge of area attempted to total area of circle.	Arva actually pro- tected.	Failures,	Percentage of failures	Cost daring the year.	Cost per acre actually protected,
Central { 1898-99 1899-1900	Acres. 1,214,720 1,235,200 830,720 838,400 564,016 564,005 2,607,416 2,637,605	667.593 450,573 451,910	72·47 76·33 76·80 79·38 79·88 80·12 76·59 78·19	860,295 938,431 563,035 687,499 422 135 441,659 1,891,465 2,017,589	Acres. 6,216 4,481 46,532 30,094 28,488 10,251 81,186 44,826	•71 •47 7•98 4.92 6•74 2•32 4.29 2•23	Rs. 29,796 32,982 21,198 22,183 9,423 10,481 60,417 65,596	Pies. 6:4 6:7 6:9 6:6 4:2 4:5

The year was a very unfavourable one for fire conservancy operations, in consequence of the yearly cessation of the rains of 1899 and the late arrival of the monsoon of 1900.

The results of the year are, however, very satisfactory and show a marked improvement as compared with previous years. The area under special protection amounts to the large total of 3,222 square miles, and the area burnt is only 2·17 per cent. of this. The area burnt was only considerable in the Oudh Circle; but even there it fell from 73 square miles to 47 in the year under review. In the School Circle the area burnt has fallen from 44 to 16 square miles, while the results in the Central Circle which were excellent last year, show a further improvement, the failures aggregating only seven square miles as against nine in the previous year.

The success obtained in Bundelkhand is particularly satisfactory, as owing to the famine in Jhánsi the forests were thrown open to the villagers, and, it speaks well for the conduct of the people that no fires occurred in consequence.

Two cases of malicious incendiarism were suspected in the Garhwal Division; but sufficient evidence to secure a conviction was not obtainble in either case. A very large number of cases of intentional firing occurred in the Pilibhit Division, where the relations between the Department and the people compare unfavourably with those in Bahraich and Kheri, though the Pilibhit forests are maintained chiefly in the interests of the people themselves.

The question of the necessity of further legislation to prevent the intentional firing of forests has been considered during the year in connection with proposals made by the Government of the Panjáb. The conclusion arrived at was that no necessity for such legislation existed in these Provinces, and this conclusion is supported by the results of the past year. The only part of the Province in which it was represented that measures other than the present law allows were required was in the hill forests of Kumaun; but the Government did not consider that any case for legislation had been made out.

Regulation of grazing and protection from cattle.—Statisties of the number of animals grazed in the forest in the year under review are given in the following table and compared with the figures of the two previous years:—

		Circle.		Total forest area.	Open to cattle.	Buffaloes grazed.	Bullocks and cows grazed.		Other animals grazed.	Total,
		-		Sq. miles.	Sq. miles.	Number.	Number.	Number.	Number	Number.

		(1897-58		3,988	2,188	96,075	387,717	134,778	10,349	628,919

There has been again an increase in the total number of cattle grazing in the forests; but the increase has been in the number of those grazing free or at privileged rates, the numbers paying full rates being less than in the previous year. The fees received for cattle paying full rates fell from Rs. 55,632 to Rs. 51,716, while those for cattle paying privileged rates rose from Rs. 25,161 to Rs. 27,015. There was a very large increase, which is partly nominal, owing to better enumeration, and partly real, owing to extensions of the grazing grounds, in the number of buffaloes, cows, and bullocks grazed free, the value of that grazing at full rates being put at Rs. 45,392 as compared with Rs. 33,679 in the previous year. The effect of the famine was felt in several Divisions in Bundelkhand; the sale or death of cattle led to a considerable falling off in the number grazed: while on the other hand cattle were sent to the School Circle to escape the drought in the Panjáb. In some of the Bundelkhand forests the rates charged for grazing have been reduced, as they were found to press too heavily on the people.

Thirty-nine wild cattle were captured in Bahraich, while in Gonda the capture of wild cattle has been entirely discontinued, as the villagers near the forests were strongly opposed to the operations.

Reproduction.—Sál has again seeded well, particularly in Oudh. Much damage was, however, done to sál trees in the Western Dún by a scale insect, which appeared in enormous numbers. In Janusár there has again been no general seeding of the deodár, but a fairly abundant crop is expected during 1900. The oak seeded well in Naini Tal Division, and in the Lansdowne forests, and bamboo seeded sporadically in all the submontane forests. The effect of fire protection has been particularly noticed in the reproduction of pine in the Airadeo forests in the Central Circle, which have been protected for only a few years, and in the reproduction of sál in the Bhinga forests in Oudh and in the submontane forests of the Central Circle generally. On the other hand, in the Jaspur Range in Garhwál, which has long been protected from fires and grazing, there is no reproduction of sál, though the trees seed well. Further observation shows that the report made last year as to the encouragement given by protection from fire to the reproduction of assaina at the expense of sál was incorrect.

Artificial reproduction.—More liberal expenditure has been incurred to improve the Ránikhet orchard, and it is to be regretted that notwithstanding the increased facilities which the extension of hill-stations and the improvement of communications with the plains afford to the profitable growing of fruit, the demand for fruit trees by the hillmen has practically ceased. The plantation suffered severely from a hailstorm, but paid its expenses. The pine plantations near Almora were

adversely affected by the drought, but a fair start has been made with the plantation of Spanish chestnuts at Airadeo. The cultural operations near Naini Tál appear to have been attempted on too large a scale, and the area has now been reduced. The result of the experiments is in the Conservator's opinion to show that it is preferable to cultivate indigenous trees.

Experiments and exploitation of forest produce.—Experiments were undertaken in the Ganges and Bundelkhand Divisions to ascertain whether the forests could supply grass fodder to surrounding districts in time of drought at a price not too high to be prohibitive. In the Ganges Division the results were not satisfactory; but in Bundelkhand the supply appears to have met a distinct want. The manufacture of turpentine in the Central Circle has been put on a more satisfactory basis, a profit of Rs. 4,000 having been made during the year, and it is reported that all the turpentine made is now sold without difficulty. In the School Circle the outlay exceeded the receipts; but a small profit is shown after deducting capital charges. An agreement has been made with the Rája of Tehri to tap the trees in the lensed chir forests, and the actual profits would have been much greater but for the initial outlay on plant for the new leased forests.

Extraction and transport. The wet slide was nearly doubled in length, and it is calculated that the total saving effected by its use exceeded Rs. 20,000. The extension of railway communications to the forest north of Moradabad would greatly assist their exploitation. In the Oudh Circle the forests are within easy reach of the Bengal and North-Western Railway; but the inability of the Company to supply the necessary rolling-stock is reported to have caused considerable inconvenience in working the forests.

Gross yield and outturn of forest produce.—The following statement shows as far as possible the gross output of the forests during the year, as compared with the previous year, but the figures are necessarily in part estimates:—

		Oire!	le.		1	1898-99.	1899-1900.	Difference.

Distric	t Prote	cted Forests	***	***	1898-99	93,000	23,000	15,401
Dit	to	ditto	•••	•••	1899-1900	2,500,000	63,000	15,447
Dit	to	ditto	***	4 8 4	Difference	+2,407,000	+ 40,000	+46

In the Oudh Circle a considerable increase in the quantity of timber removed is more than counterbalanced by a large decrease in the exports of firewood, the net decrease being due apparently to failure on the part of the Railway Company to work up to its indents, especially in the Kheri forests. The decrease in the School Circle was apparently owing partly to the depressed state of the timber market in Jaunsar, partly to a smaller output in some of the divisions for sylvicultural reasons. In the Central Circle there was a enormous increase in the export of bamboos, owing to the addition of unsold blocks of the previous year to the available supply: the result was a glut of the markets and a fall in the price of bamboos.

The only part of the forests in which timber operations are now managed departmentally on a large scale is the Jaunsar Division of the School Circle. The fuel supply of Naini Tal, Ranikhet, and Chaubattia is also arranged for departmentally, and in the Oudh Circle a large amount of timber or fuel was removed departmentally from the coppice fellings in Bahraich and Gorakhpur. But with these exceptions the greater quantity of the produce exported is shown as removed by purchasers.

The following figures compare the paying output of the forests with the amount, or value of produce taken by free grantees or rightholders:—

						ed by Govern. Gagency and	Removed by right- holders and free
					2	urchasers.	grantees.
						C. ft.	C. ft.
Timber	•••	***	***	111	***	3,591,791	806,883
						Rs.	Rs.
Fuel	***	***	***	***	144	1,50,165	58,191
Minor forest	produce				***	2,72,775	87,615

There was a decrease in the timber and fuel taken by right-holders, and a considerable increase in the value of the minor produce so taken, owing partly to the reservation of additional areas subject to rights and concessions in the Central Circle and partly to more accurate enumeration of cattle grazing.

Financial results.—The financial results of the working of the forests during the year, though not so good as in the previous year, compare favourably with the average of the three preceding year. The gross receipts stand at much the same figure as before; but there has been a considerable increase in expenditure, and the surplus is less by some Rs. 40,000. In the Central Circle the surplus has increased but in the other two circles there has been some falling off as shown in the following statement:—

Cirçle,		Receipts.			Expenditure.			Surplus,		
		Average of three forest years; 1896-97 to 1898-99.	Forest year 1898-99.	Forest year 1899-1900.	Arerage of three forest years, 1896-97 to 1898-99.	Forest year 1898-99.	Forest year 1899-1900.	Average of three forest years, 1896-97 to 1898-99.	Forest year 1898-99.	Forest year 1899-1900,
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Central	***	4,95,406	5,35,127	5,89,177	3,12,377	3,17,268	3,52,212	1,63,089	2,18,159	2,36,965
Oudh	***	4,86,148	5,03,185	4,62,861	2,68,712	2,70,431	2 75,572	2,17,431	2,32,754	1,87,289
School	***	4,96,228	5,62,108	5,41,272	3,39,735	3,66,504	3,58,239	1,56,493	19,5,604	1,83,033
										
Total	***	14,77,837	16,00,720	15,93,310	9,20,824	9,54,203	9,86,023	5,57,013	6,46,517	6,07,287

In the Central Circle the receipts were better by Rs. 54,000 than in the previous year, the improvement affecting all heads except the sales of firewood, for which there was a diminished demand in Naini Tál. The receipts in Bundelkhand were adversely effected by the famine. In the Oudh Circle the revenue fell

from over five lakhs of rupees to Rs. 4,63,000, a large decrease of Rs. 93,000, in Kheri more than counterbalancing the improved financial results in other Divisions. The decline in Kheri was chiefly owing to the Railway Company's not being able to work up to its indent owing to differences with its contractors; and difficulties regarding the supply of railway wagons also adversely affected the demand from private individuals.

In the School Circle there was a considerable increase in the receipts from departmental operations, owing to improved sales of sleepers and firewood; but the famine in the Panjáb had an adverse effect on the timber trade, and the receipts for produce removed by purchasers fell off, the total revenue of the year declining from Rs. 5,62,000 to Rs. 5,41,000. The decrease in actual receipts in this Circle, is however, more than covered by a large increase in outstandings, a sum of over Rs. 55,000 being due by a Railway Company for sleepers supplied. An increase of expenditure in the Central Circle of Rs. 35,000 is owing partly to the expenditure on the fodder experiments already referred to, partly to sums paid for the acquisition of plots in the hills which it was desirable to include in the reserves, and partly to more liberal expenditure on buildings and communications. In Oudh also heavier expenditure has been incurred on communications, buildings and demarcations, while in the School Circle there has been a considerable saving in the cost of the departmental sleeper works.

The value of timber and other forest produce in stock at the beginning and close of the year, and the net summary of the year's transactions, are shown in the two following statements:

TRADE.

Registration of Traffic.

The following traffic was registered during the year:-

- (1) Traffic with Tibet and Nepál.
- (2) Internal traffic by road and river in the districts of the Meerut Division and in the Gorakhpur and Ballia districts.
- (3) Traffic by rail with the ports, native states, and other British Provinces.

FOREIGN TRAFFIC.

The following table shows the total trade with Tibet and Nepál during the year under report as compared with that of the previous two years. The volume of the import trade in the year of report was almost the same as in last year; but the value rose by Rs. 8,25,674 or 10.8 per cent. Exports to Tibet and Nepál dropped by 10,948 maunds in weight and by Rs. 4,15,299 in value. The total trade declined by 13,296 maunds in weight; but its value shows a rise of Rs. 4,10,375 as compared with last year's figures:—

Total		3,44,412	3,01,340	2,90,392	41,16,361	46,07,770	41,92,47	
Total, traffic		19,02,141	23,00,750	22,87,454	1,07,05,693	1,22,53,903	1,26,64,278	

Trade with Tibet.—Imports during the year of report were higher than in any of the past ten years except 1898-99; as compared with last year they show a drop of 5,702 maunds in weight, but an increase of Rs. 22,615 in value. The export trade has been up to the normal amount; since last year it declined by 5,336 maunds in weight and Rs. 42,826 in value. The total imports of borax amounted to 24,407 maunds and are the largest during the past seven years. There was a decline in the imports of salt and wood, which follows on the increases which took place during the last three years. The imports of horses, ponies and mules fell off slightly; but those of cattle, sheep and goats show substantial advance since last year, with the result that the value of the total imports from Tibet shows a rise of Rs. 22,615.

Exports to Tibet dropped by 5,336 maunds in weight and Rs. 42,826 in value. Exports of cotton-goods fell off by 583 maunds; of grain by 3,924 maunds, and of sugar by 346 maunds. The drop in the despatch of cotton goods follows on the increase, amounting to 550 maunds, which took place last year; while that under grain and sugar is in continuation of decreases noticed in the preceding year's report. The value of silver exported is more than double that in 1898-99, and 4½ times more than in 1897-98. The increase may be due, as was explained last year, to the system of payment for imports in cash having sprung up in recent years.

Trade with Nepal.—During the year under report crops were plentifal in Nepal, while the scarcity prevailing in other parts of India led to very high prices

in these Provinces. There was thus room for a profitable trade; and as no restrictions appear to have been imposed by the Nepal authorities, the import trade shows. a further increase on the abnormal figures of the preceding year. The increase in weight is only 3,354 maunds, but the value has risen by Rs. 8,03,059 owing to large imports of grain and of silver coins. The export trade has also been unusually heavy, though there is a slight fall from the figures of the preceding year. The decrease in the imports of oilseeds amounting to 48,725 maunds may be attributed to a less favourable season for this crop. The decline in the imports of gums and resins, ghi and drugs (not intoxicating) follows on the increases which were noticed in the last year's report, and may be ascribed to ordinary fluctuations in The increases in the imports of hides and skins and of spices are in continuation of those which took place in the preceding year. The trade in timber has again fallen off by 29,720 maunds. The decrease occurred mainly in Kheri and is ascribed to the want of water in the river, and the consequent inability of the dealers to get wood floated down in sufficient quantity. The imports of fibrous. products, which in the preceding year fell off by 5,434 maunds, have now risen by 35,172 maunds, valued at over one lakh of rupees: the trade is reported to have been stimulated by good produce and the grant of a lease. Horses, ponies and cattle were imported in larger numbers than in the preceding year, their value showing a rise of Rs. 68,209 in all. The imports of silver, which last year fell off by Rs. 32,113, have now risen by Rs. 4,11,792.

As compared with last year the exports of petroleum, provisions (other kinds), and spices were somewhat larger than last year; while those of cotton goods, salt, and sugar show some falling off from the exceptional figures of the previous year.

ROAD TRAFFIC.

Road traffic.—The posts established in 1897 for the registration of road traffic in the Meerut Division were maintained during the year under report. The registration of the three years' traffic in that Division having been completed on 31st March 1900, the staff was moved in the following April to the Agra Division in compliance with the wishes of the Public Works Department. It is employed in collecting statistics partly in connection with the projected Shikohabad-Mainpuri-Farrukhabad railway line and partly with a view to ascertain the trade and resources: of this part of the province.

RIVER-BORNE TRAFFIC:

The trade carried partly by rail and partly by river has been included in the rail-borne trade. The trade carried by river only is compared below for the past two years:—

		}_	Weip	ht.	Value.		
			1898-99.	1899-1900.	1898-99.	1899-19004	
		()	Maunds.	Maunds.	Rs.	Rs.	
Importa	***	471	14,68,359	20,08,435	64,91,220	80,13,828	
Exports	•••		31,36,546	37,86,861	1,80,20 181	1,71,78,874	
	Total	\	46,04,905.	57,95,296	1,95,11,401	2,51,87,702	

In 1898-99 the river-borne trade was registered for 10 months only, while the figures for 1899-1900 relate to the whole year. Allowing for this, there is a slight increase due to the westerly movement of food stocks on account of the famine. Of the total imports of 20 lakhs of maunds, 12 were of grain, while the exports consisted chiefly of grain and oilseeds (7 lakhs of maunds each) and sugar (9 lakhs of maunds).

Rail-borne traffic.

Total traffic.—The total rail-borne traffic of the year is compared below with that of 1898-99, the trade in animals and treasure being omitted:—

			Weight in	maunds.	Value in rupees.			
			1898-99.	1899-1900.	1898-99.	1899-1900.		
			Mds.	Mds.	Rs.	Rs.		
Imports	•••	.,,	3,01,08,397	3,54,33,569	15,02,06,155	17,75,68,712		
Exports	***		4,02,63,656	5,08,02,534	20,93,53,506	24,89,59,853		
	Total		7,03,72,053	8,62,36,103	35,95,59,661	42,65,28,565		

The general improvement in the trade of the province, which was noticed in the reports of the preceding two years, was maintained during the year of report. The volume of the total traffic of the year rose by about 159 lakhs of maunds or 22 per cent.; and the value by 670 lakhs of rupees or 18 per cent. The import trade shows an advance in weight of 53½ lakhs of maunds or 17 per cent.; and the export trade of 105½ lakhs of maunds or 26 per cent. The value in each case rose by over 18 per cent. Imports from Bengal and the Panjáb show some improvement; while those from Rájputána and Central India fell off largely. Exports, which in the ordinary course are chiefly directed to the ports of Calcutta and Bombay, had now to be diverted to Rájputána and Central India and the Bombay Presidency to meet the requirements of those provinces in consequence of the famine which prevailed in these tracts during the second half of the year under report.

Imports.—The following table compares the weight and value of the chief articles imported during the year of report with those of the preceding year:—

	Мапп	ds.	Rupees.		
Articles.	1898-99.	1899-1900.	1898-99.	1899-1900.

The imports of coal during 1898-99 were abnormally heavy, and had exceeded the preceding year's imports by 52 lakhs of maunds. During the year under report there has been a decline of $4\frac{3}{4}$ lakhs of maunds. The imports of cotton declined by 47,863 maunds owing to smaller receipts from the Panjáb and Berar, where, owing to the failure of the autumn rains, the yield of this crop had been very short. In consequence of the celebration of Hindu marriages in exceptional numbers and the return of prosperity after the famine, the import of cotton goods during 1898-99 was the heaviest on record, and exceeded the preceding year's imports by two lakhs of maunds. For the year under report there is a considerable fall. The imports

of grain exceed the last year's figures by 22 lakhs of maunds in weight and 64 lakhs of rupees in value. They are accompanied by increased exports. The increased supplies were received in all the blocks of these provinces, mostly from Bengal and partly from the port of Calcutta. The great mortality among cattle in the provinces affected by famine raised the imports of hides and skins from 67,877 to 5,17,446 maunds. Of the increase amounting to $4\frac{1}{2}$ lakes of maunds, the Bombay Presidency contributed 1,80,563 maunds and Rajputana and Cental India 1,90,029 maunds. The imports of railway plant and rolling stock have risen this year by five lakhs of maunds. The increases occurred mostly in the Mecrut and Rohilkhand blocks, in connection with the construction of the Ghaziabad-Moradabad and Hardwar-Dehra Dún railways. The decrease of 1,33,627 maunds in the imports of salt follows on an increase of about a lakh of maunds which took place in the preceding year. Imports of stone and lime rose from 91 to 341 or by 25 lakhs of maunds. They were received principally in the Meerut block almost entirely from the Panjáb for the construction of the Ghaziabad-Moradabad Railway. During the preceding two years enormous quantities of boot sugar were imported in the provinces. Countervailing duties on bounty-fed sugar were therefore imposed early in 1899; and they seem to have had the desired effect in as much as the imports of the year under report amounted to only 1,74,273 maunds as compared with 3,10,354 maunds in 1898-99, showing a decrease of 1,36,081 maunds, and this in spite of a short crep of sugarcane in these provinces which brought about a large increase in the price of raw sugar during the last six months of the year.

Exports.—The quantities and value of the principal articles exported from these provinces during the past two years are compared below :—

B 11	Articles.		Maur	ads.	Rupees.		
Arti			1898-99.	1899-1900.	1898 99.	1899-1900.	
Cotton, raw Wheat Other grains Ritles and skins Shell-lae Otlsseds Ghi Saltpetre, &c. Sugar	***		Mds. 9,16,720 1,08,38,867 56,04,996 3,06,978 1,21,900 79,79,436 2,62,070 3,81,688 51,66,386	Mds. 10.82.773 1,03.11,489 1,60,50,564 7.28,981 1,65,697 79.19,801 5,20,057 4,18,037 44,98,572	Rs. 1,13,44,409 2,70,97,164 1,27,63,177 78,34,776 60,95,000 2,69,00,948 87,79,709 19,71,147 2,47,24,692	Rs. 1,64,44,616 3,02,89,999 3,83,32,21,98 47,22,363 3,15,37,626 96,01,710 20,60,591 2,34,82,697	

The rise in prices due to short outturn in famine-stricken tracts stimulated exports of cotton from these provinces; and as stocks from the preceding two years' produce seem to have been in hand, exports of cotton rose by 1,66,053 maunds in weight and 51 lakhs of rupees in value. In 1898-99 the increase over the preceding year's exports of grain and pulse amounted to about 79 lakhs of maunds in weight and 701 lakhs of rupees in value. The year under report shows a further advance; the exports having exceeded the preceding year's figures by nearly one erore of maunds in weight and two crores and eighty-seven lakhs of rupees in value. The exports of wheat in 1899-1900 amounted to 103 lakhs of maunds as compared with 108 in 1898-1899. Exports to the port of Calcutta fell off by 25 lakhs of maunds, and to the port of Bombay by 231 lakhs of maunds, owing to the requirements of the famine-stricken provinces. On the other hand, exports of wheat to Karachi rose by ien lakes of maunds; to the Panjáb by $6\frac{1}{2}$; to Rajputana and Central India by 231; and to the Bombay Presidency by 41 lakhs of maunds. The exports of "rice not in the husk" show a small drop, and those of "rice in the husk" are practically stationary; but there was a large increase in the export of millets and pulses which were supplied to the famine areas. Gram, of which a quantity was received from Bengal for this purpose, was the principal crop exported. The trade in hides and skins has been already discussed. The greater portion of the immense stocks collected in Cawnpore from

the famine districts was despatched to Calcutta for shipment to Europe. Owing to larger imports of stick-lac in these provinces, shell-lac was manufactured on an extended scale hence the increase this year of 43,797 maunds over the exports of 1898-99, in which year a diminution of 39,417 maunds had taken place in consequence of a limited demand in Calcutta for export by sea. The increases of 37,978 and 36,349 maunds respectively in the exports of ghi and saltpetre this year follow on the decline of 66,482 and 21,659 maunds, which took place last year owing, in the case of the former, to increased home consumption in consequence of the celebration of marriages, and in that of the latter to a restricted demand in Calcutta for export by sea. During the year under report the demand of saltpetre for export by sea was good, and to be able to meet it the province had to increase its imports by 34,022 maunds. The decline of 6,67,814 maunds in the exports of sugar this year follows on the increase of 7,49,477 maunds which occurred in the preceding year. The yield of the sugarcane crop of 1898-99, which influenced the trade of the year under report, was less favourable than that which preceded it. The demand for sugar from the Panjáb, Rájputána and Central India, which are the chief consumers, was however restricted in consequence of the famine. Hence a drop of 3,96,642 maunds took place in the export of refined sugar and of 2,71,172 maunds in that of unrefined sugar: total 6,67,814 maunds, costing $12\frac{1}{2}$ lakes of rupees.

Animals.—The import and export trade in animals is compared below with that of the preceding year:—

	Imp	orts.	Exports.		
. A nimels.	1898-99.	1899-1900.	1898-99.	1899-1900.	
Sheep and goats Horses, poines and males	Number 982 488 5,158 1,561	Number. 1,296 706 5,621 1,702	Number. 2,761 11,775 2,012 1,502	Number. 5,206 30,272 3,900 1,492	
Total	8,189	9,825	19,050	40,870	

The import of all kinds of animals shows slight increase since last year. The exports are more than double of what they were in the preceding year, and were chiefly directed to Calcutta. The increase is probably to be ascribed to the South African War.

Treasure.—The following table exhibits the movement of treasure during the past two years:—

		lmpc	orts.	Exports.		
	-	1898-99.	1899-1900.	1898-99.	1899-1900.	
	}-	Ounces.	Ounces.	Ounces	Ounces.	
Gold coin and bullion	}	***	1,637		144	
Silver coin		85,66,025	1,10,63,191	36,51,786	29,36,091	
Silver bullion		47,92,916	51,60,134	3,13,904	1,76,544	
Total	-	1,33,58,911	1,62,24,962	39,65,690	31.12,635	

The increase in the receipt of silver bullion noticed in the returns of the preceding two years was maintained in the year of report, the imports having advanced by $3\frac{2}{3}$ lakes of ounces, while the exports fell off by $1\frac{1}{3}$ lakes of ounces. This appears to be due to the demand for silver for ornaments, and so to evidence the increasing prosperity of the provinces.

PUBLIC WORKS.

(a)—Buildings and Roads Branch.

The following is a review of the operations in each of the three Circles of Superintendence during the year:—

FIRST CIRCLE.

IMPERIAL SERVICES.

Military Works.

There was no important work carried out under this head.

PROVINCIAL SERVICES.

CIVIL BUILDINGS.

Administration.

Dehra Dan district.—Additions and alterations to the kachabri buildings at Mussoorie.

This work was noticed in last year's report. It has since been completed at a total cost of Rs. 13,443 against an estimate of Rs. 13,347.

Pilibhit district.—Constructing Settlement Survey Office at Pilibhit.

This work was noticed in last year's report. It has since been completed at a cost of Rs. 15,834 against an estimate of Rs. 15,187.

Meerut district.-Construction of a Government Circuit-house at Meerut.

This work consisted in converting the building occupied by the Divisional and District Engineers and originally the residence of the Superintendent of the Jail into a Circuit-house for His Honor the Lieutenant-Governor. The work was estimated to cost Rs. 16,247 and was carried out at a cost of Rs. 16,457.

Agra district.—Additions and alterations to the Collector's kachahri at Agra.

This work was fully noticed and almost completed during 1898-99, and the expenditure to the end of that year was Rs. 18,537. It was finally completed in the beginning of 1899-1900 at a total cost of Rs. 19,244 against an estimate of Rs. 18,733.

Constructing a Government Circuit-house at Agra.

An estimate amounting to Rs. 35,266 was sanctioned for this work, and a sum of Rs. 6,000 was expended during 1898-99 in collecting materials. The possession of the land was, however, only obtained in Jane 1899, and the constructing was then taken in hand. It was practically completed in March 1900 with the excepttion of white and color washing, laying out of water pipe, and metalling the approach roads. Certain alterations were ordered during the progress of the work which necessitated the submission of a revised estimate. The main features of the building are (1) the erection at the facade of 6 inlaid marble pillars obtained from the fort, surmounted by a white stone parapet of approved design, (2) the introduction of teak-wood flooring in the drawing and dining rooms, (3) the construction of a panelled ceiling of Norwegian pine with moulded teak borders, (4) the facework of the fireplaces in the dining and drawing rooms are of white and red sand stone handsomely carved in imitation of ornamental tracery work at Fatehpur-Sikri. The site selected is on well drained elevated ground commanding a good view of the fort, the Táj, the iron bridge over the Jumna, and a portion of the city proper. The expenditure up to the end of 1899-1900 was Rs. 35,303 against a revised estimate of

Acquiring land, and huts over it, for the construction of the Government Circuit-house at Agra.

An estimate for Rs. 6,000 was sanctioned for compensation of land and the possession and subsequent demolition of the kutcha huts of two small villages that existed on the area taken up for the new Circuit-house. Of this sum Rs. 1,283 were

expended by this Department, and the balance adjusted through the exchange account.

Agra district.—The work of conservation of the buildings of archæological and historical interest was undertaken on an extensive scale during the year, in this circle and will be found fully reported on under the head archæology.

Educational.

Saharanpur district.—Constructing new Technical Workshops for the Thomason Civil Engineering College, Roorkee.

This work was noticed in the last year's report. It was completed during the year under review at a cost of Rs. 35,293 against an estimate of Rs. 34,892.

Ecclesiastical.

Agra district.—Extending the cemetery near the St. Paul's Church at Agra.

There being no room in the cemetery near the St. Paul's Church for further interment, an estimate for Rs. 3,596 was sanctioned for enclosing additional land and the construction of a lych gate. The work has been practically completed, and the expenditure to the end of the year was Rs. 3,115 against an allotment of Rs. 3,000.

Ja ils.

Farukhabad district.—Re-roofing the European subordinates' quarters attached to the Central Jail at Fatchgarh.

An estimate amounting to Rs. 8,840 for re-roofing the subordinates' quarters was canctioned, and an allotment of Rs. 3,500 made during the year. In bungalow No. 1 the main roof was completed and the verandah roof nearing completion. In bungalow No. 3 the brickwork and plastering were completed and tiles and timber collected.

Re-roofing barracks Nos. 8 and 10 in the District Jail at Fatehgarh.

This work was also in the hands of the District Surveyor. The sanctioned estimate for it amounted to Rs. 3,815, and the allotment for the year, which amounted to Rs. 2,115, was fully utilized. The work in barrack No. 10 was completed. In barrack No. 8 all brickwork and plastering were done, tiles were collected and trusses remained to be fixed in position.

Police.

Aligarh district.—Providing additional accommodation in the Reserve Police Lines at Aligarh.

The new barracks sanctioned are on the standard plan so far as regards the dimensions, but are of more permanent construction. Rs. 13,094 were expended against a total estimate of Rs. 15,055, and the buildings nearly completed.

Bijnor district.—Re-constructing the Reserve Police Lines at Bijnor.

The work was taken in hand in September 1899. The whole of the year's allotment, viz., Rs. 8,796, was utilized in completing the quarter-guard, one barrack for constables and their cook-house. Corrugated sheets and bricks worth about Rs. 2,500 are at site. The work is in progress.

Moradabad district.—Re-roofing two unfinished barracks and Institute barrack with Allahabad tiles to render them suitable for Police Training School at Moradabad.

This work was taken in hand in December 1899, and the whole of the allotment, viz., Rs. 20,000, was spent. Floors, archroofs, doors, trusses, etc., have been completed. The work is in progress.

MEDICAL.

Agra District.—Additions and alterations to the Lunatic Asylum at Agra.

A preliminary project amounting to Rs. 3,15,000 was administratively sanctioned for extensions to the Lunatic Asylum at Agra which was to become a

,

Central Asylum for the North-Western Provinces and Oudh, and was to be placed in charge of a Superintendent and Specialist in brain diseases. Fair estimates aggregating Rs. 1,32,273 were finally sanctioned in connection with the extensions. Provision of Rs. 1,00,000 was made in the Provincial Civil Works Budget for 1899-1900 for the work, but subsequently, in view of the proposal for including the Asylum ground in the site of the Terminal Station of the Indian Midland Railway and Agra, Delhi Chord Railway, a sum of Rs. 52,000 was withdrawn, leaving a balance of Rs. 48,000, which was expended on the works in progress. It has now been decided that the site will not be taken up for Railway purposes, and that the extensions shall be gone on with. The undernoted works were completed during 1899-1900, the cost of each being indicated against it—

					Ks.	8.	p.	
(1)	Cells for European M	fales	144	•••	 17,253	0	0	
(2)	Ditto fe	emales	***	***	 8,615	0	0	
(3)	Ont-houses for above	(1) and (2)		***	 5,028	0	0	

Two estimates were sanctioned for collection of materials, one for Rs. 7,600 and the other for Rs. 38,000, and expenditure to the extent of Rs. 436 and 11,095 was incurred on them respectively, when the orders of Government were received to stop further extensions. The construction of the Irrigation Conduit and enclosure wall also remained unfinished under that order. In the enclosure wall and conduit work was done to the extent of Rs. 3,872 and Rs. 2,379, respectively.

COMMUNICATIONS. I.—METALLED ROADS, A.—Bridged and drained throughout.

Dehra Dún district.—Raising, bridging and metalling the Dehra and Fatchpur road.

The first section of this road from Dehra to mile eleven was practically completed. The expenditure incurred up to date has been Rs. 47,140 against an estimate of Rs. 40,035, the excess expenditure being mainly due to alterations found to be necessary in the deep cutting of the east approach to the Tons river. The expenditure on the second section has been Rs. 27,209 against an estimate of Rs. 47,432, but the entire length was raised and metalled throughout with one coat of metal by October 1899. The road is now open to traffic as a metalled road from end to end and is provided with a Mail Tonga Service in connections with the Railway, which was opened to Dehra on the 1st March 1900. The road! will not however be fully completed until the cold weather of 1900-1901.

Dehra Dún district.—Raising the roadway of the Bindal bridge in mile 106 of the Meerut, Roorkee and Landour trunk road.

An estimate for this work amounting to Rs. 3,239 was administratively and finally sanctioned in June 1899 and the work was completed in March 1900 at a cost of Rs. 3,290. The bridge is an iron girder bridge of 1 span of 100 feet, and as originally designed and constructed allowed a headway of 8 feet from the floor to the bottom boom of the girders. From the flood registers which are observed during the rains it was noticed that the water often rose slightly above the bottom booms, and to avoid all risk to the bridge it was decided to raise it three feet higher.

The roadway was removed and the whole bridge bodily raised by means of 4 screw jacks one at the end of each girder. Each end was raised alternatively about two or three inches at a time until the full height had been reached. As an additional precaution the bay was filled up with earth and wedges fixed under the bottom boom about 20 feet apart, which were kept tight as the raising proceeded. The work was carried out under the direct control and supervision of Mr. J. R. C. Nicolls, Executive Engineer and Mr. P. R. C.

Saháranpur district.—Protective works to the Khandour Nadi Bridge.

This work was described in the last year's report. It was completed at a cost of Rs. 36,878, the estimated cost being Rs. 36,842. Rupees 21,816 were expended during the hot weather and the work was completed before the monsoon of 1899.

INCORPORATED LOCAL FUNDS. COMMUNICATIONS. 1.—METALLED ROADS.

A. -Bridged and drained throughout.

Muzaffarnagar district.—Metalling six miles of the Muzaffarnagar and Bijnor road.

A further sum of Rs. 4,918 was expended on this work, bringing the total expenditure up to Rs. 28,234 against an estimate of Rs. 38,350.

Budaun district.—Raising, bridging and metalling the Budaun and Kadirchauk road.

This work was originally taken in hand in July 1896. During 1899-1900 the earthwork of the 7th mile has been completed and 32,000 cubic feet of kankar collected for it. \$,800 cubic feet of kankar has also been collected for the 8th mile. The total expenditure incurred on the work since its commencement is Rs. 5,606 against an estimate of Rs. 20,777. The budget provision for the work in 1899-1900 was Rs. 2,000. As this is a large estimate the work will run on for several years as funds are granted.

Budaun district.—Raising, bridging and metalling the Gunnaur and Babrala road.

This work was noticed in the last year's report; 3 culverts and road embankments have been completed and 41,241 cubic feet of kankar collected at roadside at a cost of Rs. 6,977. The budget provision for the year was Rs. 4,300. As the estimate amounts to Rs. 16,079 it will run on for some years.

Meerut district .- Metalling the Meerut and Baghput road.

This work, which has been in progress for some years, has been completed, the allotment for the year of Rs. 6,270 being utilized and the total expenditure being Rs. 47,443 against an estimate of Rs. 49,717. The rains were unfavorable for metalling, and the consolidation of the kankar of the last few miles was carried out during the cold weather.

Bijnor district.—Converting Chandpur, Nurpur, Tajpur and Seohara road from 4th class to 2nd class.

This work was noticed in the last year's report. A further expenditure of Rs. 2,643 has been incurred on it during the year, whatever work was necessary in miles 5 to 12 has been done, and these miles have improved. The estimate is a large one and the work will run on for several years and will be carried out as funds are given. The total expenditure on the work since its commencement, in February 1896, is Rs. 8,855 against an estimate of Rs. 43,278.

Mainpuri district.—Raising and metalling the Sirsaganj and Kaurara railway feeder road.

An estimate for Rs. 10,254 was sanctioned for this work in 1898-99 in which year earthwork costing Rs. 202 only was done. There was an allotment of Rs. 5,660 for the year under report: this sum was fully utilized in carrying out 100,000 cubic feet of earthwork and collecting 85,255 cubic feet of kankar.

II .-- Unmetalled roads.

A .- Bridged and drained throughout.

A 11 73 111

Dehra Dún district.—Improving the Mussoorie and Rajpur Bridle road.

traffic (especially in the case of pack animals) and are difficult to maintain in proper order. Five diversions were required at these points, of which the first and third have been completed and opened for traffic. The third is the longest and most important of the diversions. The total estimate amounts to Rs. 18,579; the expenditure incurred has been Rs. 13,980.

LOCAL INCORPORATED FUNDS.

CIVIL BUILDINGS.

Medical.

Bijnor district.—Constructing a new Dispensary at Najibabad.

This work was taken in hand in September 1899 and completed with the exception of a part of the tiled roofing. An expenditure of Rs. 6,190 has been incurred on it against an estimate of Rs. 6,832.

Aligarh district.—Constructing a Boarding House and Subsidiary Buildings for the Anglo-Vernacular Middle Class School at Hathras.

The work, which is estimated to cost Rs. 14,378, was commenced and an expenditure of Rs. 5,336 incurred on it during the year.

B .- Partially bridged and drained.

Aligarh district.—Raising and metalling a portion of Nanu, Dadan and Sankra road.

The section up to mile 10 was completed for Rs. 13,801, the estimated cost being Rs. 14,270. A further section from mile 19 to Dadau, which is estimated to cost Rs. 26,547, is in progress, the allotment of Rs. 8,500 for the year being fully ntilized.

Pilibhít district.—Constructing bridges and culverts on the Pilibhít and Madhotanda road.

This work was taken in hand in January 1900, the whole of the year's allotment of Rs. 3,000 has been expended; iron girders and some other materials have been collected for the Tanda nala bridge.

VI .- Class roads - Cleared only.

Shahjahanpur district.—Constructing an iron-girder bridge across the Paharwa nálá on the Zarinpur, Mirzapur and Kalan road.

This work was taken in hand in June 1899 and completed in March 1900, at a cost of Rs. 5,985 against an estimate of Rs. 6,512.

Miscellaneous Public Improvements.

Agra District.—Providing wire fencing round the Public Park at Agra.

This work was mentioned in the last year's report. The proposed Park is divided into three sections,(i) South Woodlands, (ii) North Woodlands and (iii) Fort and Taj gardens. South Woodland and the Fort gardens were fenced in during 1898-99 at a cost of Rs. 5,443, and North Woodlands was fenced in last year. The total expenditure was Rs. 7,681 against an estimate of Rs. 7,416. The fencing consists of six lines of wire with oval galvanized sheet iron hollow standards, which are light and handsome, and at the same time not very costly. Iron gates and wickets have been provided where necessary.

Contribution Works.

Budaun district.—Constructing Jubilee Eye Hospital in the Sadr Dispensary at Budaun.

This work was noticed in last year's report: it has since been completed at a cost of Rs. 2,888 against an estimate of Rs. 2,888.

Agra district.—Additions to the Girls' Boarding House attached to the Lady Lyall Hospital at Agra.

This work was mentioned in last year's report. The old servants' quarters have been altered to meet the requirements of the additional accommodation required for the girl boarders, and a new set of servants' houses has been constructed. The whole work has cost Rs. 2,457 against Rs 2,460, the amount of the sanctioned estimate.

Etáwah district.—Constructing a Female Hospital at Etáwah.

This hospital was commenced as a contribution work in December 1898, and the Government allotment of Rs. 3,000 was expended up to the end of March 1899. The contribution by the public (Rs. 6,728) was received last year through the Chairman, District Board, and the whole work was completed in November 1899 at a total cost of Rs. 10,022 against an estimate of Rs. 10,023. The building consists of four blocks closed in on all sides by a masonry wall high enough to ensure privacy. The blocks are (1) dispensary, (2) private wards, (3) general ward, and (4) quarters for Lady Doctor and Compounder. The hospital is located on a plot of Government land behind the Sadr Tahsili and near the male Dispensary, and is within easy reach of all desirous of attending it.

SECOND CIRCLE. IMPERIAL SERVICES.

Military.

There was nothing important carried out under this head.

CIVIL WORKS.

Opium.

Lucknow district.—Conversion of the old Serai at Chillawan into an Opium godown.

The estimate for the work was sanctioned for Rs. 9,372 and the work completed during the year at a cost of Rs. 9,835.

Postal.

Lucknow district.—Additions and alterations to the Post-office at Dilkusha.

The estimate for the work was sanctioned for Rs. 3,700 and the work completed at a cost of Rs. 3,563.

Naini Tul district.—Additions and alterations to the Post-office at Naini Tal.

The estimate for the work was sanctioned for Rs. 17,906 and Rs. 4,863 expended on the work during the year under report.

Minor Departments.

Naini Tal district.—Construction of buildings in connection with the Bacterio-logical Laboratory at Mukhtesar.

Under this head the following works were undertaken during the year under review:—

- (1) Reconstructing the main building. Estimate, Rs. 47,692.
- (2) Constructing a residence for the Imperial Bacteriologist. Estimate, Rs. 20,000.
- (3) Constructing a Public Works godown and Staff quarters. Estimate, Rs. 5,455.
- (4) Constructing quarters for the Artist and Native Laboratory Assistant. Estimate, Rs. 3,041.
- (5) Enlarging stables in the new cattle sheds. Estimate, Rs. 862.
- (6) Other works in connection with the Laboratory. Estimate, Rs. 20,892.

In regard to No. (1) the main building—this was completely gutted by fire on the 27th and 28th September 1899. A full and thorough enquiry was held as to the destruction of the building, but other than conjectures it could not be traced how the fire originated. But in the investigations held in this connection it was not considered expedient that the Imperial Bacteriologist should have his residential quarters in the main building, and a separate residence was accordingly determined

on, the project for which is now under preparation. The expenditure in reconstructing the main building was Rs. 13,470 up to 31st March 1900, against an allotment of Rs. 13,000, and that of the residence Rs. 1,795, against an allotment of Rs. 1,300. The remaining items of work (3 to 6) have been completed in all respects.

As the masonry had to be constructed in the winter during severe frosts, a small quantity of salt and one-sixteenth part of Portland cement were mixed with one part of stone (fat) lime and one part of sand. The mortar has set hard and well.

PROVINCIAL SERVICES.

CIVIL BUILDINGS.

Words

Naini Tul district.—Construction of a new Forest office.

The estimate for the work was sanctioned for Rs. 16,293 and completed during: the year at a cost of Rs. 16,256.

Administration.

Naini Tal district.—Construction of a new Government House at Naini Tal.

This work has been reported on in detail in the reports of 1897-98 and 1898-99. The entire work of construction was nearly completed in the year underreview at a total cost of Rs. 7,52,959, against the revised estimate of Rs. 7,50,600, the expenditure during the year being Rs. 2,07,687 against an allotment of Rs. 2,05,000.

The foundation stone of the building was laid on the 27th April 1897, and the building was nearly completed by the 31st March 1900.

Naini Tál district.—Electric Light Installation.

The estimate for the work was sanctioned for Rs. 40,710 and expenditure to the extent of Rs. 36,478 incurred during the year under review against an allotment of Rs. 36,000. The entire work has been completed, but certain payments are still to be made to the contractors, Messrs. Balmer Lawrie and Company, and which have under agreement been withheld as guarantee against the proper performance and completion of the contract.

Naini Tal district.—Re-building the Secretariat Offices Barnsdale, at Naini Tal.

This work was noticed in last year's report in which it was stated that Rs. 15,305, were expended on the work from January to March 1899. During the year underreview the entire work has been completed, with the exception of a little plaster, &c., and the building is now in occupation. The expenditure during the year was. Rs. 58,985, and the total expenditure up to 31st March 1900, Rs. 74,289.

Naini Tal district.—Constructing Departmental Offices, Barnsdale.

This work was sauctioned in December 1899 at a cost of Rs. 29,768, and the expenditure during the year was Rs. 7,019. The work is being rapidly pushed on and is expected to be completed in 1900-1901.

Law and Justice.

Lucknow district.—Construction of a new building for the Judicial Commissioner and Subordinate Courts.

The necessity for providing better accommodation for the Judicial Commissioner's Court at Lucknow, has engaged the attention of the Local Government for many years, viz., since 1895, when the Hon'ble Sir A. P. MacDonnell, Lieutenant-Governor and Chief Commissioner came into office. The buildings in which the Judicial Commissioner's Court and other Subordinate Courts are housed, were considered to be quite unsuitable to the purpose, as being not only ill-ventilated and otherwise inconvenient and uncomfortable, but also ill-calculated to inspire the public with a sense of the dignity of the law administered within its precincts.

His Honor the Lieutenaut-Governor and Chief Commissioner accordingly determined to supply this want, but in view of Financial pressure owing to heavy expenditure on Famine and Plague measures, the scheme had necessarily to be deferred till in December 1897, when prospects were more favourable, orders were issued for the preparation of plans and estimates for an entirely new building.

In 1898 rough plans and estimates were submitted, but as these were found defective in many respects, and as it was also subsequently contemplated to accommodate the Judge, Small Cause Court, and the other Subordinate Judicial offices in the new building, revised plans and estimates were ordered to be prepared. These final plans and estimates were prepared by Mr. W. G. Wood, Executive Engineer, Under-Secretary to Government, Public Works Department, North-Western Provinces and Oudh, and estimated to cost Rs. 2,35,000.

The estimate for the work was sanctioned in February 1900, and Rs. 2,000 was allotted in the year under review for clearing the site and other preliminary operations. The site chosen for the building is in a very central locality, being: the piece of ground to the left or south of the road running from the Telegraph office to the Residency and opposite the Museum and Chota Chatter Manzil buildings. The style of architecture of the building is Suracenic to accord with the other large buildings in the vicinity, and the structure will, on completion, be decidedly an imposing and ornamental one, and such as is required, and appropriate for the highest Civil Appellate Court in Oudh.

The foundation stone of the building was laid by the Hon'ble Sir A. P. MacDonnell, G.C.S.I., Lieutenant-Governor and Chief Commissioner of the North-Western Provinces and Oudh, on the 31st March 1900. A sum of Rs. 1,00,000 has been provided in the ensuing year's Budget (1900-1901) and the work is in active progress.

Gonda district.-Constructing a District Judge's Court at Gonda.

The work was noticed in last year's report. It was completed in the year underreview at a total cost of Rs. 31,495 against a sanctioned estimate of Rs. 31,004.

Police.

Lucknow district.—Construction of a first class police station at Nasirabad.

The estimate for the work was sanctioned for Rs. 6,755 and the total expenditure up to 31st March 1900 was Rs. 6,372. The work is approaching completion.

Bara Banki district.—Construction of a first class police station at Hydergarh.

The estimate for the work was sanctioned for Rs. 6,347 and Rs. 463 only expended in the current year. The work was postponed for want of funds.

Miscellaneous.

Lucknow district.—Additions and alterations to the building occupied by the offices of the Director of Land Records and Agriculture and Judge of Small Cause Court.

Full particulars in regard to this work were given in last year's report, and nothing further need to be added here. The entire work was completed during the year under report at a cost of Rs. 33,326 against the sanctioned estimate of Rs. 34,744. The expenditure during the year was Rs. 2,744.

Miscellaneous Public Improvements.

Naini Tál district.—Drainage Works.

This work was fully noticed in last year's report and requires no further comment here. The entire work has been completed in the year under report at a total expenditure of Rs. 79,040 against a sanctioned estimate of Rs. 79,073. The expenditure during the year was Rs. 45,091 against an allotment of Rs. 47,000.

Naini Tal district .- ecial repairs to the Ballia ravine

The estimate for this work was sanctioned in January 1899, for Rs. 5,416 to repair damages caused by the rain of August 1898. The work was commenced last year and completed in the year under report at a cost of Rs. 5,416.

COMMUNICATIONS.

I .- METALLED ROADS.

A .- Bridged and drained throughout.

Garhwal district.—Constructing a steel girder bridge over the river Koh on the Kotdwara and Lansdowne road.

The work was noticed in detail in last year's report. In the year under review all masonry work was completed, and in fact the bridge was expected to be completed in all respects, unfortunately the firm (Messrs. Jessop and Company) to whom the contract for the girders was given, were unable, owing to the Boer War and consequent lack of transport from England to India to procure steel works from England, and therefore they could not construct the girders in 1899-1900. The bridge is, therefore, still unfinished, and expenditure during the year only Rs. 1,000. The total expenditure up to 31st March 1900 was Rs. 20,968, against the estimate of Rs. 48,600.

Garhwal district.—Constructing a portion of the Kotdwara-Lansdowne cart road between the Kotdwara Railway station and the Koh bridge.

The work was continued from the previous year and completed at a cost of Rs. 25,809 against a sanctioned estimate of Rs. 25,581.

Lucknow district.—Constructing a steel girder bridge over the river Gumti near Sikandarbag on the Lucknow-Fyzabad road.

In 1891 the old Pile bridge over the river Gumti was destroyed by flood, and in 1893 proposals were called for for the construction of a new bridge. The matter, however, lay in abeyance till December 1898 when the Agent and Chief Engineer, Bengal and North-Western Railway represented that as the railway line had been extended to Lucknow, and a new railway station established at Badshahnagar across the river, the absence of a proper bridge to connect the line of communication (the present pontoon bridge being unsuitable and insufficient) greatly hampered traffic, and that the want of such a bridge was keenly felt by the public. The necessity for the work was admitted by the Government, and orders were accordingly issued for the preparation of revised plans and estimates for a steel girder bridge of 3 span each 100' clear on brickwork abutments and piers resting on wells sunk into clay below the river bed.

This project, was sanctioned in October 1899 for Rs. 1,37,073 and Rs. 50,000 allotted for expenditure on the work during the year under report. The well sinking was completed by the 31st March 1900 and the work is in progress.

A special Sub-Division was constituted in connection with the construction of this bridge. Certain difficulties were encountered in the sinking of the wells, but they were surmounted without delaying the work. The girders for the bridge are being obtained through the India Office.

II .- UNMETALLED ROADS.

A .- Bridged and drained throughout.

Naini I al district.—Constructing a new iron girder bridge in mile 8 of the Ramnagar and Ranikhet cart road. The work was noticed in detail in last year's report, and in the year under review was completed at a cost of Rs. 20,881 against a sanctioned estimate of Rs. 19,901.

Naini Tâl district.—Constructing a light suspension bridge in mile 13 of the Ramnagar and Ranikhet cart road.

The estimate for the work was sanctioned for Rs. 5,388 and completed during the year under report at a cost of Rs. 5,408.

B .- Partially bridged and drained.

Naini Tal district.—Re-aligning and improving a portion of the Naini Tal and Gurari road between Naini Tal and Bhowali.

The estimate for the work was sanctioned for Rs. 6,155 and completed during the year at a cost of Rs. 6,094.

Naini Tal district.—Constructing a road between Bhim Tal and Ranibagh. .

The estimate for the work was sanctioned for Rs. 14,655 and the work completed during the year at a cost of Rs. 14,041.

General.

The following works in connection with the damages caused by the rain of August 1898 were completed during the year under report:—

- (1) Bareilly-Ranibagh-Naini Tál Trunk road. Estimate, Rs. 24,193. Expenditure, Rs. 25,142.
- (2) Brewery to Naini Tal new cart road. Estimate, Rs. 19,386. Expenditure, Rs. 19,347.
- (3) Ranibagh and Ranikhet cart road. Estimate, Rs. 11,403. Expenditure, Rs. 11,649.
- (4) Naini Tal and Ranibagh bridle road. Estimate, Rs. 7,004. Expenditure, Rs. 6,764.
- (5) Special repairs to the Ballia ravine. Estimate, Rs. 5,416. Expenditure Rs. 5,416.
- (6) Special repairs to Local II class B roads. Estimate, Rs. 7,069. Expenditure, Rs. 7,063.

Famine.

There was no famine in this circle, therefore under this head there is nothing of importance to record, with the exception that the works in connection with the construction of culverts and metalled dips on roads raised and remodelled during the famine of 1897 are still being carried out according as funds have been available.

LOCAL INCORPORATED FUNDS.

CIVIL BUILDINGS.

Educational.

Fyzabad district.—Providing additional accommodation to the Jalulpur Town School.

The estimate for the work was sanctioned for Rs. 5,726, and Rs. 750 expended on the work during the year. The work is in progress.

Bahraich district.—Constructing a Vernacular Middle School at Kaisarganj.

The estimate for the work was sanctioned for Rs. 6,949 and Rs. 5,005 expended during the year under report. The work is in progress.

Bahraich district.—Constructing a branch school at Barihat.

The estimate for the work was sanctioned for Rs. 4,940 and Rs. 720 expended during the year. The work is in progress.

COMMUNICATIONS.

I .- METALLED ROADS.

A .- Bridged and drained throughout.

Hardoi district.—Raising and metalling miles 4 to 8 of the Hardoi and Farrukhabad road.

The work was noticed in last year's report, and the work completed in the current year.

- (1). Raising and metalling miles 4 to 8. Estimate, Rs. 12,166. Expenditure, Rs. 9,669.
- (2). Metalling the Hardoi and Farnkhabad road. Estimate, Rs. 11,811. Expenditure, Rs. 11,084.

B -Portially bridged and drained.

Sultanpur district.—Constructing a masonry bridge over the Chuna Nala on the Sultanpur and Karwar road:

The work was noticed in last year's report. In the year under review it was. completed at a cost of Rs. 16,085.

Bara Banki district.—Metalling the Bara Banki and Haidargarh road.

The work was noticed in last year's report. In the year under review Rs. 11,153. were expended. The total expenditure up to 31st March 1900 was Rs. 15,799. The estimate was sanctioned for Rs. 37,032. The work is in progress.

II. - UNMETALLED ROADS.

A .- Bridged and drained throughout.

Almora district.—Special repairs to the Champawat-Tanakpur section of the. Askot and Tanakpur road.

The estimate for the work was sanctioned for Rs. 7,954 and completed during the year under review at a cost of Rs. 7,569.

Almora district. - Constructing a light suspension bridge over the Sarjoo riverat Harara.

The estimate for the work was sanctioned for Rs. 3,172 and Rs. 1,988 expended during the year under report. The masonry of the abutments have been,

Garhwal district -Realignment of the pilgrim route between the Karnpayag; and Rudrapayag section of the Badrinath and Srinagar road.

The estimate for this work was sanctioned in December 1897, for Rs. 23,402; but for want of funds it has been held in abeyance. The urgency of this work. was strongly represented to Government in December 1899, and as the District. Committee could not provide funds, a special grant of Rs. 6,000 was given from the Government Reserve for expenditure during the year. The work is well in hand.

Garhwal district.—Constructing a suspension bridge over the Alaknanda, river at Chamoli.

The estimate for the work was sanctioned for Rs. 25,314, and up to the 31st March 1900, Rs. 7,999 were expended. The saddle abutments have been finished up to the bed of the saddle rollers, as also the roadway retaining walls behind the abutments to road level. The materials for the rest of the work are being collected: and carried to site. The work on the approach roads has been started.

Ras Bareli district.—Raising and metalling part of the Rae Bareli and Partab... garh road.

In last year's report it was stated that 6 miles of earthwork has been completed and some materials collected. In the year under review one coat of metalling was. done throughout and metal for 2 coats is at site. The total cost up to the 31st March 1900 was Rs. 12,704. The estimate was sanctioned for Rs. 17,917.

Unao district.—Metalling a portion of the Unao and Rae Bareli road between: Purwa and Morawan.

The estimate for the work was sanctioned for Rs. 9,912 and Rs. 2,919 expended during the year. Materials for 21 miles have been collected and 18 miles conHardoi district.-Metalling certain portion of the Hardoi and Pihani road.

The work was noticed in last year's report. The estimate was sanctioned for Rs. 7,760 and Rs. 6,950 expended up to 31st March 1900.

B.-Fartially bridged and drained.

Fyzabad district.—Re-constructing a bridge of 16' span over the Mirzapur Nálá in mile 2 of the Akbarpur and Halapur road.

The estimate was sanctioned for Rs. 3,789 and work completed during the year at a cost of Rs. 3,802.

Bahraich district.—Raising the Bahraich and Bhinga road.

The work was noticed in last year's report. The road has been completed up to the right bank of the Rapti river, and owing to its encroachment, the left bank has for the present been left incomplete. The expenditure up to 31st March 1900 was Rs. 27,408, against the sanctioned estimate of Rs. 34,844.

Hardoi district.—Constructing a bridge over the Sai river on the Sitapur and Menhdighát road.

The estimate was sanctioned for Rs. 6,692 and Rs. 2,520 expended during the year in collecting materials. The work is in progress.

Naini Tal district.—Re-building the bridge over the Bora river at Kaladhungi on the Naini Tal and Garrapu road.

The work was noticed in last year's report. It was completed in the year under review at a cost of Rs. 21,194, against a sanctioned estimate of Rs. 20,972.

Naini Tal district.—Improving the Bhimtal, Dhari, Mukhtesar and Nathwakhan-Mukhtesar road.

The estimate for the work was sanctioned in October 1899, for Rs. 17,047 and Rs. 8,498 expended during the year under report. The work is in progress.

Naini Tal district.—Constructing a light suspension bridge over the river Gola at Kathgodam.

The estimate for the work was sanctioned for Rs. 4,000, and the work completed at a cost of Rs. 2,118.

III .- Class roads banked and surfaced with Muram but not drained.

Almora district.—Re-alignment of the road across the Nirpani cliff.

This work was noticed in last year's report. In June 1899, a revised estimate was sanctioned for Rs 17,684 and the work completed in the year under report at a total expenditure of Rs. 17,207.

The new road from Garbyang to Malla Kala Pani, which is connected with this route, has also been completed at a cost of Rs. 3,150, against a sanctioned estimate of Rs. 3,147.

Almora district.—Constructing the Saran and Kunwargarh road in the Pindar valley.

The work was noticed in last year's report as having been commenced in 1895, stopped for 3 years for want of funds, taken up again in 1898, since which time it has been continued. The expenditure up to 31st March 1900 was Rs. 6,372. The estimate was sanctioned for Rs. 9,365.

CONTRIBUTION WORKS.

Almora district.—Constructing a new Dispensary building at Almora.

The work was noticed in last year's report as having been just commenced. In the year under review the entire building has been practically completed. The items of work remaining to be done being (1) white-washing, (2) glazing windows, (3) painting woodwork, (4) sheet iron roof. The expenditure during the year was Rs. 10,257. The estimate was sanctioned for Rs. 15,185.

Garhwal district.—Constructing a Dispensary and Assistant Surgeon's quarters at Srinagar.

The estimate was sanctioned for Rs. 15,104 and Rs. 5,400 expended during the year, or a total expenditure of Rs. 6,185 up to 31st March 1900. The male ward kitchen and latrine have been completed, and the female ward is in progress.

The Assistant Surgeon's quarters could not be taken in hand and had to be held over, pending sanction to a supplementary estimate for additional accommodation. This has since been sanctioned and the work is in progress.

THIRD CIRCLE.

IMPERIAL SERVICES.

Military Works.

Mirzapur district. -- Re-building the escarp wall below officers quarters in the Fort at Chunar.

The sanctioned estimate for this work amounted to Rs. 2,556, and the work was completed at a cost of Rs. 2,551. In addition to the above, Rs. 464 was spent in improving the Lightning Conductors in the Fort, and Rs. 973 in constructing two Store Depôts at Katwa and Narghat against sanctioned estimates for Rs. 642 and Rs. 3,004, respectively.

CIVIL WORKS,

Opium.

Gházipur district.—The substitution of a new galvanized sheet iron roof over No. 8 Cake Godown in the Gházipur Opium Factory, which had been commenced in the previous year, was completed during 1899-1900 at a cost of Rs. 6,378 against an estimate of Rs. 6,485.

The construction of new quarters for the guard and two Sub-Inspectors in the Opium Factory at Gházipur, also an unfinished work of last year, was completed during 1899-1900 at a cost of Rs. 14,407 against the sanctioned estimate of Rs. 14,469. The outlay during the year was Rs. 1,606 against an allotment of Rs. 1,937.

A new Chest shed 113' × 40' with galvanized corrugated sheet iron roof, was built in the place of the old one, now dismantled. The work was carried out during the year at a cost of Rs. 8,569 against a sanctioned estimate of Rs. 8,972.

The conversion of the old office block into a cake godown in the Opium Factory, at Ghazipur was sanctioned and commenced late in the year. The sanctioned estimate is Rs. 31,534, of which Rs. 7,795 were spent against an allotment of the same amount. The work is in progress.

Post Office.

Campore district.—Construction of a new Post office at Campore.

The sanctioned estimate for this work is Rs. 26,370. Rupees 8,001 were spent on collection of materials during 1898-99 and Rs. 13,647 during the year under report, making a total expenditure of Rs. 21,648 to end of March 1900. The full allotment during the year, viz., Rs. 13,646, was utilized. The Post office walls have been built up to 12' above plinth. The stables, out-houses and compound wall are nearing completion.

Jhansi district.—A building belonging to Mr. Platts was purchased for Rs. 12,000 for use as the Head Post Office at Jhansi and the amount was paid through the Collector.

PROVINCIAL SERVICES.

CIVIL BUILDINGS.

Administration.

Campore district.—Additions and alterations to Derapur Tahsili.

This is an incomplete work of 1897-98. The amount of sanctioned estimate was Rs. 14,862 and the expenditure incurred during the year, Rs. 7,000. The total expenditure to end of March 1900 was Rs. 13,522. The work was completed with the exception of Tabsildár's quarters, which is nearing completion, the Naib-Tahsil dár's quarters and the enclosure wall.

Fatchpur district.—Enlarging the record room and constructing enclosure wall Khajwa Tahsili.

An estimate for Rs. 3,415 was sanctioued for this work, and expenditure to the extent of Rs. 2,412, against an allotment of Rs. 2,410 was incurred during the year. About two-thirds of the work have been finished and all materials for its completion are at site.

Allahabad district.—Protecting from fire the four blocks of Public offices at Allahabad.

Work was started in June 1899 against a sanctioned estimate of Rs. 10,849, and expenditure to the extent of the allotment, viz., Rs. 10,000, was incurred during the year. The work was practically completed.

Allahabad district.—Putting down dancing floor in the dining and antercoms of the Government House at Allahabad. The sanctioned estimate for these works amounted to Rs. 4,323. The dining room floor was completed at a cost of Rs. 3,094, against an allotment of Rs. 3,059. Orders were subsequently received that work on the antercom floor was not to be done.

Allahabad district.—Constructing a Plant House at Government House at Allahabad. An estimate for Rs. 4,970 was sanctioned for this work, which was started in February 1900 and completed in March 1900 at a total cost of Rs. 4,886.

Hamirpur district.—Constructing a Court House and residence for the Joint Magistrate at Mahoba.

These works were noticed in the last year's report. During the present year both the works were completed in all respects and made over to the Civil Department. The estimate for the residence was Rs. 9,111, and the expenditure incurred Rs. 8,723, that for Court House was Rs. 7,126, against the sanctioned estimate of Rs. 7,106.

Gházipur district.—Constructing a new Tahsíli at Saidpur.

This was an unfinished work of the previous year. It was completed at a cost of Rs. 23,790, against a sanctioned estimate of Rs. 22,704, the outlay during the year was Rs. 2,375 only.

Jaunpur district.—Additions and alterations to the Tahsili building at Machhlishahr.

The sanctioned estimate for this work was Rs. 13,249, against which Rs. 6,890 were spent. The work was well in hand at the close of the year. The Sub-Registrar's Office, which forms part of the project for the above work, was completed.

Ballia district.—Constructing a new Collector's Kachahri at Ballia.

The sanctioned estimate for this work is Rs. 65,020, and the outlay during the year was Rs. 37,572, against an allotment of Rs. 35,000. The work is still in progress. The superstructure to the level of verandah roofs was completed. Jack arches for the verandah were being turned. Doors and windows, iron for trusses, sál wood and steel girders were on the spot at the close of the year.

Ballia district.—Constructing subsidiary buildings to the Collector's Kachahri at Ballia. The work was nearly finished. The outlay was Rs. 4,059, against a sanctioned estimate of Rs. 4,987 for the work.

Ballia district.—Constructing a new Treasury at Ballia. The outlay incurred on this work was Rs. 11,638, (the allotment for the year being Rs. 12,000), against a sanctioned estimate of Rs. 15,075. The superstructure including all roofs was completed, and plastering, painting, flooring, &c., were in hand.

Ballia district.—Constructing a new Tahsili at Ballia. This work was nearly finished when the year closed. The amount of the sanctioned estimate was Rs. 22,775, and the expenditure incurred during the year was Rs. 19,068, against an allotment of Rs. 20,000.

Azamgarh district.—Constructing a new Tahsili at Ghosi.

The sanctioned estimate for this work was for Rs. 19,785. Owing to the specification only allowing first class bricks to be used in the building, no contractor tendered for the work. A revised estimate has accordingly been prepared and submitted for sanction. The expenditure to end of March 1900 was Rs. 730 incurred in purchasing steel joists.

Minor Departments.

Cawnpore district.—Re-roofing the Director's and Assistant Director's bungalow and Agricultural Farm at Camppore.

This work was started in anticipation of sanction to the estimate. An estimate amounting to Rs. 12,895 was, however, sanctioned in G. O. No. 1893W., dated 12th May 1900. Expenditure to the extent of Rs. 3,712 was incurred during the year on collection of materials.

Allahabad district.—Renovating three tombs—Sultan Khusru's, his mother's and his sister's-in the Khusrubagh at Allahabad.

The sanctioned estimate for this work was for Rs. 6,898, and expenditure to the extent of Rs. 2,000 was incurred during the year.

Educational.

Allahabad district .- Constructing a Training School for North-Western Provinces and Oudh at Allahabad.

The work was started in August 1899, and an estimate amounting to Rs. 1,06,730, was sanctioned for it. Rupees 75,652 was expended during the year, against an allotment of Rs. 80,000. The additions to the upper school were completed before the 30th March 1900. In regard to the Boarding-house the roofing was well in hand in the main building, and that of the Public rooms was completed. Plastering and painting were in progress and the roofing of the Staff Quarters and out-offices was well advanced.

Allahabad district.—Constructing Chemical Laboratories, Muir Central College, Allahabad. An estimate amounting to Rs. 62,249 was sanctioned for this work, and Rs. 25,920 was spent during the year against an allotment of Rs. 29,000. The walls have been finished to level of roof girders.

Allahabad district.—Constructing Physical Science Class rooms, Muir Central College, Allahabad. The sanctioned estimate for this work is Rs. 98,176. Work was started in July 1899 and the sum of Rs. 28,975 was spent during the year, against an allotment of Rs. 30,000. The walls were finished to an average height

Law and Justice.

Campore district.—Additions and alterations to Judge's Court at Campore.

This work was completed during the year at a cost of Rs. 5,491, against an estimate of Rs. 5,490.

Allahabad district.—Re-building out-offices attached to High Court, Block. No. II, Allahabad.

The sanctioned estimate was Rs. 5,170. Work was started in May 1899, and completed at a total cost of Rs. 5,264.

Jhansi district.—Additions and alterations to the Judge's Court at Jhansi.

The expenditure incurred on the work was Rs. 5,220, against a sanctioned estimate of Rs. 5,278. Work was commenced in December 1899. It was completed and made over to the Civil Department in March 1900.

Ballia district.—Constructing a new Munsifi at Ballia.

This, an unfinished work of 1898-99, was completed at a cost of Rs. 6,508, against a sanctioned estimate of Rs. 6,428. The outlay during the year was Rs. 5,124.

Ghazipur district,-Constructing a new Munsifi at Mohammadabad.

This, also an unfinished work of 1898-99, was completed at a cost of Rs. 6,875, against an estimate of Rs. 6,633 sanctioned for it. The outlay during the year was Rs. 5,132.

Jails.

Allahabad district.—Re-roofing Barracks Nos. 2, 3, 11, 12 and 14 in the District Jail, Allahabad.

The sanctioned estimate for this was Rs. 8,972. Work was started in November 1899, and by the end of March 1900, was completed, with the exception of Barrack No. 14, in which battens were being laid. Rupees 8,236 were expended during the year.

Police.

Futehpur district.—Constructing an extra barrack in the Reserve Police Lines at Fatehpur.

An estimate amounting to Rs. 4,428 was sanctioned for this work, and Rs. 3,363 were spent during the year. The superstructure was completed. All materials for completion of the work are at site.

Banda district.—Constructing a 3rd class Police station at Mataundh.

This work was started on the 1st October 1898 and was nearly completed in March 1899. Owing, however, to black soil foundations, several walls showed bad cracks and two stables collapsed in the rains. All these were rebuilt during the year. The sanctioned estimate for the work was Rs. 5,005. The total expenditure incurred was Rs. 5,367, out of which Rs. 368 only was spent in 1899-1900. The building was completed in all respects, and made over to the Police Department in July 1899.

Mirzapur district.—Converting the Magistrate's Lock-up into Barracks for the accommodation of the Armed Police at Mirzapur.

The amount sanctioned for this work was Rs. 9,593; the expenditure incurred during the year, Rs. 6,569, and the allotment Rs. 7,217. At the end of the year masonry work was completed in almost all the buildings and roofing materials were at site.

Ballia district.—Constructing quarters for the Reserve Inspector of Police at Ballia.

The amount of sanctioned estimate was Rs. 5,721 and the expenditure incurred during the year Rs. 5,614. The work was practically completed, only whitewashing and varnishing remained to be done.

MISCELLANEOUS.

PROVINCIAL PUBLIC WORKS BUILDINGS

Ballia district.—Constructing an office for the District Engineer at Ballia.

The sanctioned estimate was Rs. 4,993 and the work was completed at a cost of Rs. 4,998.

COMMUNICATIONS.

I .- METALLED ROADS.

A .- Bridged and drained throughout.

Benares district.—Protecting the stone bridge over the Karamnassa river on the Grand Trunk road.

This work was sanctioned and commenced late in the year. Arrangements were made for the vigorous prosecution of the work early in the beginning of 1900-1901 with a view to its completion before the rains set in. Materials to the value of Rs. 4,949 against an allotment of Rs. 5,000, were purchased, when the year closed. The amount of sanctioned estimate was Rs. 11,169.

Ballia district.—Constructing roads in connection with the new head quarters at Ballia.

The sanctioned estimate for the work amounted to Rs. 4,156 and the outlay to the end of the year was Rs. 3,230. Earthwork, kankar collection and culverts were all finished. The consolidation of metal will be done during the rains of 1900.

Miscellaneous Public Improvements.

Jhánsi district.—Constructing a Tank at Piprai.

The amount of sanctioned estimate was Rs. 10,793 and the total expenditure incurred Rs. 13,082. (Rs. 5,319 Famine and Rs. 7,763 Provincial). The work was completed in all respects during the year under report.

INCORPORATED LOCAL FUNDS.

CIVIL BUILDINGS.

Educational.

Allahabad district.—Additions to the Boarding-house attached to the Zilla School at Allahabad.

The estimated cost of the work was Rs. 5,030 and Rs. 2,971 were spent during the year against an allotment of Rs. 3,000.

Medical.

Cawnpore district.—Constructing a combined Dispensary and Hospital Assistants' quarters at Bilhour.

Work was started in December 1899 and completed in March 1900 at a cost of Rs. 2,069, against the sanctioned estimate for Rs. 2,055.

Cawnpore district.—Constructing combined Dispensary and Hospital Assistants' quarters at Akbarpur.

An expenditure of Rs. 1,199 was incurred during the year on collection of materials against an allotment of Rs. 1,920, the amount of sanctioned estimate being Rs. 2,055.

Basti district.—Constructing a new Dispensary at Basti.

The detailed fair estimate for the work is under preparation, based upon the sums noted below which have been approved by Government for each building, viz:—

A .- Finally sanctioned.

Bricks and stone to the value of Rs. 2,572 only were purchased during the year.

COMMUNICATIONS.

I.-METALLED ROADS.

A .- Bridged and drained throughout.

Cawnpore district.—Converting the 3rd class road from Grand Trunk Road and Sarsaul Railway Station to Narwal into 1st class.

This was an incomplete work of the previous year, and was completed during the year under review at a total cost of Rs. 7,161 against a sanctioned estimate of Rs. 7,051. The expenditure during the year was Rs. 3,721 against an allotment Rs. 3,750.

Hamirpur district.—Metalling Rath-Kulpahar road, from Kulpahar to Kulpahar Railway Station.

This was also an unfinished work of the previous year. The amount of sanctioned estimate was Rs. 1,25,251, and the expenditure incurred Rs. 98,733 (Rs. 92,441 Famine, and Rs. 6,292 ordinary). The work was completed in all respects.

Jalaun district.—Metalling Jalaun-Madhogarh road.

An unfinished work of 1893-99. The amount of sanctioned estimate was Rs. 49,950 and the expenditure incurred Rs. 47,452. The work was completed in all respects.

Jalaun district.—Constructing a lattice girder bridge over Chiria Nálá on the Jalaun Madhogarh road.

This was also an unfinished work of the previous year. The amount of sanctioned estimate was Rs. 14,048 and the expenditure incurred Rs. 13,762. The work was completed.

Gorakhpur district.—Metalling the Deoria and Barhaj road.

The whole road was metalled from Deoria to Barhaj, a distance of 18 miles. The second coat of metalling in mile 16th and in half of mile 17th only remains to be done. The expenditure up to the end of March 1900 amounted to Rs. 38,111 against a sanctioned estimate of Rs. 42,293.

Basti district.—Metalling the Nagarh and Birdpur road.

The expenditure on this work to end of March 1900 was Rs. 9,563, against a sanctioned estimate of Rs. 20,988. The earthwork in the road was nearly finished and more than half of kankar collected.

B .- Partially bridged and drained.

Jhansi district.—Converting the Mow-Punch into a 1st class road.

The amount of estimate for the work was Rs. 1,57,856 and the expenditure incurred Rs. 91,956, (Rs. 36,199 Famine, and Rs. 55,757 ordinary). The work is still in progress. Collection of metal in miles 14 to 21 was completed.

Basti district .- Metalling the Basti and Bansi road.

The amount of sanctioned estimate for this work was Rs. 16,673, and the expenditure to end of March 1900, Rs. 3,986. The earthwork in the road, nearly one-fourth, and kankar collection, nearly one-third, are finished.

II .-- UNMETALLED ROADS.

A .- Bridged and drained throughout.

Banda district.—Raising and bridging Naraini Kartal road.

The amount of revised estimate for the work was Rs. 22,028, and expenditure Rs. 25,350.

· The estimate provided for a 40' span iron girder bridge over the Ghorar nala in mile 34, and 15 metalled dips. The raising was at least 6" above water level throughout, except at the dips where the approaches were sloped and at the Ghorar Nálá where the height was 4' above High flood level. The work was first started in 1889 when the land was acquired and an alignment made. A large quantity of material was purchased and iron work for the bridge obtained from the Roorkee Workshops. At this stage a discussion arose about the site of the bridge and the alignment of the road. The Superintending Engineer disapproved of both, and the Chairman, District Board, supported his views; eventually the alignment was adhered to, but the bridge site was altered. The work lay in abeyance until it was resumed in 1895. But owing to the press of famine works, which were started in the following year, the work was again set aside, as soon as the earthwork had been completed. It was again taken up towards the close of the year 1898-99 when the digging of the foundations was started. The foundations of the bridge were completed in the hot weather of 1899, though some difficulty was experienced in keeping down the water. The work was entirely finished by the end of the year.

Benares district.—Raising and bridging the Alinagar and Baburi road.

An unfinished work of the previous year. Most of the earthwork and all the culverts were completed during the year under report. The work is still in progress. The expenditure incurred during the year was Rs. 4,309, and the outlay to end of the year Rs. 8,123, against a sanctioned estimate of Rs. 10,190.

Ballia district.—Constructing Ballia-Ghorowli road.

This was also an unfinished work of the previous year. The expenditure in 1899-1900 was Rs. 3,002, and the outlay to the end of the year Rs. 10,589, against a sanctioned estimate of Rs. 12,017. The work was in progress when the year closed.

B. - Partially bridged and drained.

Hamírpur district.—Constructing an arched causeway on the Berwa nadi at Behuni, on the Hamírpur-Rath road.

The sanctioned revised estimate for the work was Rs. 9,166, and the expenditure incurred Rs. 5,098. As the revised estimate was received on the 27th February 1900, only the well curbs could be made before the close of the year. The work is in progress.

Jaunpur district.—Constructing bridges and culverts on roads raised by famine labour.

The bridges and culverts on the Baragaon and Surapur and Khutahan and Sarpatha roads were completed. The work on the other roads was to be resumed on intimation of the next year's allotment. The expenditure incurred during the year was Rs. 2,995, and the outlay to end of the year was Rs. 8,995, against a sanctioned estimate of Rs. 21,490.

Gorakhpur district.—Constructing a new 2nd class road from Ganeshpur (Pharenda Railway Station) to Sinduria via Tirmohanighat and Maharajganj.

The amount of sanctioned estimate for the work was Rs. 44,942, and the expenditure to end of March 1900, Rs. 40,578. The work was completed. The saving is due to the non-construction of eight culverts which the Superintending Engineer considered should not be built, and also to certain savings in the matter of land compensation.

Basti district.—Raising and bridging the road from Bitheria to Chanderdipghát.

The amount of sanctioned estimate for the work was Rs. 12,181, and the expenditure incurred to end of March 1900, Rs. 11,985. The work was completed.

Basti district.—Raising and bridging the road from Domariaganj to Bitharia.—The sanctioned estimate was for Rs. 10,904, and the expenditure incurred Rs. 10,910.

The work was completed.

Basti district.—Raising and bridging the road from Khalilabad to Chibra-ghat.—The sanctioned estimate was for Rs. 23,680, and the expenditure Rs. 18,144.

The work was completed.

III. Roads banked and surfaced with Muram or similar material, but not drained.

Fatchpur district.—Constructing 11 culverts on the Amauli and Shalibazpur road.

The sanctioned estimate for this was for Rs. 5,929, and Rs. 1,362 were spent in the collection of materials.

IV. Roads banked but not surfaced, partially bridged and drained.

Bánda district.—Bridging and draining the Mow-Bargarh road.

The estimate was for Rs. 9,432, and the expenditure Rs. 7,213. This road was raised by famine labour in 1897. The estimate provided for constructing 16 dips, 5 causeways, and cutting a road for about half a mile in the hills, and metalling it for about one mile. Some metal and rubble stone had already been collected by famine labour, but the rest including ballast was collected last year, when two open causeways were also built up; 11 dips and five causeways were built during the current year and the hill road was cut out.

Mirzapur district.—Constructing bridges and culverts on roads raised by famine labour.

Bridges and culverts on the Lalganj and Hallia road were completed, work on the other roads was to be resumed, on receipt of intimation of an allotment for the year 1900-1901. The expenditure incurred during the year was Rs. 2,736, against an allotment of Rs. 3,000. The outlay to the end of the year was Rs. 5,165, again-t a sanctioned estimate of Rs. 8,785.

V. Roads cleared, partially bridged and drained.

Jhansi district.—Constructing nine causeways and metalling two miles of the Goona-Madanpur road.

The amount of estimate was for Rs. 15,539, and the expenditure incurred Rs. 9,331. The work on causeways Nos. 1, 2, 3 and 4, was finished, 550,000 cubic feet of earthwork were executed and 75 per cent. of the metal was collected. The work is still in progress.

Ganges Navigation Works.

The usual operations were undertaken for maintaining a navigable channel for cargo boats and steamers over that portion of the Ganges which lies between its junctions with the Jumna and the Gogra. The minimum depth of the channel was 5 feet in the Allahabad district, which is responsible for keeping 58 miles of river navigable, in the Benares Division the depth varied from 4 to 5 feet.

In the Allahabad district, the work for the season was confined to the length between the junction of the Ganges and the Jumna rivers and Sirsaghat, a point 24 miles down the river. Below Sirsaghat no work was undertaken, as the river was uniformly and sufficiently deep. Early in November 1899 the river began to develope sand banks, sotas and shallows, and the work of constructing bundals was started, but towards the end of January 1900 owing to a rise of the river, all bundals were dismantled, and it was not thought necessary to start operations again till the 17th April 1900.

The operations in the Benares Division were carried out between Mahawai in the Mirzapur district, and the confluence of the Ganges with the Gogra in the Ballia district. This section covers a distance of about 250 miles, and passes through the districts of Mirzapur, Benares, Gházipur and Ballia. A navigable channel was kept open during the whole of the working season (November to 15th June,) and no obstruction to traffic occurred. No accidents were reported, and the operations carried on were very successful.

The approximate outlay on the season's operations of 1899-1900 was Rs. 7,309 as detailed below:—

·	GRAND TOTAL	12,07,760	83,877	12,91,637	9,03,95,681

The total expenditure to the end of the year includes Rs. 8,45,54,128 direct, and Rs. 58,41,553 indirect charges. Of the direct charges, Rs. 8,13,21,978 have been provided from Imperial, and Rs. 32,32,150 from Provincial Funds.

Note.—The Ken Canal direct charges include a sum of Rs. 7,891 on account of Tools and Plant which are to be debited to the Tons Canal under 43, Capital. The adjustment will be made in the counts for 1900-1901.

Profit or loss based on realizations.—The revenue actually realized and the charges against Revenue during the last two years are shown below:—

		1898-	99.			1899-1	.900.	- <u>-</u>	Increase

The net results for the last five years are shown below :-

Class of works.			1895-96.	1896-97	1897-98.	1898-99.	1899-1900.	
				Rs.	Rs.	Rs.	Rs.	Rs.
Protective w	orks			-2,29,887	-1,75,691	-1,40,078	-1,62,847	1,78,574
	do.	,		-2,03,688	31,59,436	44,32,716	26,90,847	33,12,487
	do.	***	,	64,937	1,50,834	1,66,990	1,45,680	84,697
		Total	***	3,68,638	31,34,579	44,59,628	26,73,680	32,23,610

The general result of the year's operations is a net revenue of Rs. 64,67,059, of which Productive Works contributed Rs. 63,91,209, representing a return of 7.7 per cent. on the total expenditure to the end of the year on all Productive Works.

The Betwa Canal is the only Protective Work, its receipts fell short of the direct and indirect charges by Rs. 8,847 only, but if the interest charges are also included the total loss on this canal amounts to Rs. 1,73,574 for the year.

Minor works give a net profit of Rs. 84,697.

Taking the canal systems as a whole the receipts from all sources show a clear profit of Rs. 32,23,610 after meeting all charges. This is the second highest figure of profit on record, and has only been exceeded by the returns of 1897-98.

Total receipts, charges and interest to the end of the year.—The following shows the total receipts (realizations), charges and interest from the opening of the canals to the end of 1899-1900:—

	Protective Works.	Productive Works.	Minor Works.	Total.
Total of direct and indirect receipts	Rs. 10,42,434	Rs. 18,84,72,104	Rs. 77,91,252	Rs. 19,73,05,790
Ditto direct and indirect revenue charges	14,49,700	7,45,38,370	53,71,050	8,13,59,120
Ditto net revenue	-4,07,266	11,39,33,784	24,20,202	11,59,48,670
Ditto interest charges	26,48,548	8,68,77,831		8,95,26,879
Ditto net revenue, deducting interest charges,	-30,55,814	2,70,55,908	24,20,202	2,64,20,291

The accumulated net revenue to the end of the year exceeds all charges, including interest, by over 264 lakhs.

Provincial Contract.—A new contract was entered into with the Government of India for the two years from 1st April 1898 to 31st March 1900. The terms are as follows:—The Local Government retains the whole of the direct receipts from Minor Irrigation Works, and half the not direct receipts from Major Productive Works. It pays interest to the Imperial Government on the total Capital outlay from all sources on Productive Public Works, and also on the Capital outlay (Rs. 23,35,555) from Imperial Funds on Minor Works and Navigation.

The account for the year under review stands thus :-

						Rs.
Direct Receipts from Minor Wor	ks	415	***	118	•••	2,15,536
Half net revenue, Productive Wo	rks Rs. (80	, 23,3 75—2	6,96,891 <u>—</u> 5	3,26,484)		26,63,242
			· Total, r	eceipts		28,78,778
Expenditure on Minor Works (I	neluding e	apital outl	ay, Works I	Expenses	_	
and Agricultural charges)	***	•••	•••		***	3,53,313
Interest payable to Government	of India	• • • •	•••	•••	•••	81,72,144
Amount paid out	•••	***	101	***		35,25,457
Loss to Provincial Government	***	***	***	•••	,	6,46,679

In fixing the contract adjusting figure, the loss under Irrigation had been estimated at Rs. 14,12,000, the Province has therefore virtually gained the sum of Rs. 7,65,321 on the contract during the year.

Area irrigated and details of gross revenue assessed.—The area irrigated and details of the gross revenue assessed for the past 11 years are given in the following statement:—

Year.	Area irrigated.	Occu- pier's rate.	Owner's rate.	Plauta- tions.	Water- power.	Navi- gation.	Mis- cellane- ous.	Total direct.	Indirect revenue.	Gross revenue.

Average for 10 years ending with 1898-99, 1899-1900	2,011,193	57,50,459 82,41,261	3,91,014 4,50,691			19,015 15,576	65,690	64,86,244 90,60,129	12,31,898	77,18,142 1,03,89,012

The assessments of the year under review amount to Rs. 1,03,89,012, and give the second highest figures on record, being about $2\frac{1}{4}$ lakhs below those of 1896-97. They are about $26\frac{3}{4}$ lakhs or 34 per cent. above the average for the previous ten years.

SECTION II .- AGRICULTURAL.

Nature of the season, demand for water, &c.

Kharif.—During April and May ordinary hot weather conditions prevailed over most canal districts. Scattered showers fell in parts during May, but they did not sensibly check the demand, which continued strong until the monsoon broke about the middle of June. The rains were light for about a week and demand began to rise again on the Lower Gauges Canal, but it was finally checked by general and heavy rain in the last week of June. From that time until the end of July, rain fell almost without cessation, and in some places caused damage to standing crops. From the first week in August there was a general clearing and the rains as a whole were considerably below the normal. A few beneficial showers fell in the month of September on the southern half of the country watered by the Lower Gauges Canal. With this exception the rainy season practically ceased from the beginning of August in almost all canal districts. Hot west winds and a drought set in and gave rise to a very strong demand for canal water. The canals were then reopened and maintained running during the remainder of the season for the preservation of the kharif crop. The area they thus irrigated is the second highest on record.

Rabi.—The very early cessation of rain and the hot dry winds of September so thoroughly dried the soil that, excepting in the southern half of the lower Ganges Canal, practically no rabi crops could be sown without the aid of canal or well water. At the same time the supply in the Ganges was the lowest ever known, and the temporary regulating dams had to be constructed three weeks earlier than usual, with irrigation in full operation. The months of August to November presented an extraordinary coincidence of conditions. The whole of the late kharif required watering to bring it to maturity. Nearly the whole rabi area required watering before it could be sown. At the same time the water supply ran short much earlier than usual. The incessant efforts and inspection required to make the available water go round, where it was wanted, threw a very severe strain on all the executive staff of the Department. The difficulties of an inadequate supply continued till scattered showers, averaging an inch in many places, fell during the latter half of January. These showers, though neither heavy nor general, saved the situation by somewhat easing

the demand and at the same time sensibly replenishing the river supply. The result of this abnormal season was that the *rabi* crop as well as the *kharif* was the second highest recorded, while the areas of several crops in both seasons as wheat, sugar, maize, poppy, &c., reached the highest areas yet irrigated by canal water.

Area irrigated by the canals.—The following statement shows the areas irrigated during the last 11 years (excluding those irrigated by the Tarái and Bhábar Canals which are under the Commissioner of Kumaun):—

The second second second		දිව ආ ස		m n n		,	Canals.) m		lkhand kes.	Branch.

	1,083,234		308,004	324,700			129,083	25,362	1,244			3,023,884
1897-98	914,022	866,591						17,214		2,044		2,511,173
1898-99	901,602	701,508	209,966					16,117		1,950		2,253,802
Average for 10 years	789,112	637,213	182,462	240,880	34,926	16 ,54 9	94,513	12,104	1,031	1,639		2,011,193
ending with 1898-99.	1,261,601	746,0 96	264,427	321,468	36,622	21,414	128,681	2 2,372	1,658	2,175	23,280	2,829,794

The total area irrigated was 2,829,794 acres. This is over 40 per cent. above the average of the previous 10 years and stands next to the area of the famine year of 1896-97. All the canals have done well. The Ganges Canal has exceeded the highest previous record by about 16.5 per cent., while the Eastern Jumna Canal area is only about 3,000 acres below its highest record. The Agra and Rohilkhand Canals show their second highest areas; and the Lower Ganges Canal the third highest yet recorded on it. The Fatehpur Branch was opened on the 1st December 1898 and irrigated only 2,630 acres in the rabi of 1898-99, but it has covered 23,280 acres during the year under review.

Kharif and rabi areas.—The table below shows the kharif and rabi areas irrigated during the last 11 years:—

·			Kharif.	Rabi.		Percentage.

Both kharif and rabi areas are very greatly in excess of the average acreage in the previous 10 years, and have been exceeded only by those of the famine year of 1896-97. In both crops the large area was principally caused by an early cessation of rain, which made it equally necessary to finish the kharif with irrigation and commence the rabi with a watering.

Crops irrigated.—The areas of the different crops, kharif and rabi, irrigated during the last 11 years are shown below:—

Crops.	1889-90.	1890-91.	1891-92.	1892-93.	1893.94,	1894-95.	1895-96.	1896-97.	1897-98.	1898-99.	Average for the past 10 years.	1899 . 190 0.

Grand Total	1,879,403	2,014,114	2,045,030	1,799,840	1,645,197	929,461	2,010,021	3,023,884	2, 511,17 8	2,253,802	2,011,193	2,829,794

In addition to the very high total area, the records of this year give the highest areas yet reached under six main crops, namely sugarcane, wheat, maize, cotton, poppy and peas.

There has been a remarkable rise in poppy, the area of which is more than double the decennial average. The fall in indigo continues, and the area is the lowest of the last ten years. The decline is attributed to low prices for indigo and the preference given to high priced food crops.

SECTION III.—NAVIGATION.

Revenue and Expenditure.—The gross revenue (realizations) and expenditure during the past two years were as follows:—

REVENUE.			
	- 1	Rs.	Rs.
A Property of the Control of the Con		11,246 5,209	12,174 3 885
Total, Receipts]	16,455	16,059
EXPENDITURE.			
A seed of a seed of the seed o		14,462 7,098	19,547 7,874
Total, Expenditure	'	21,560	26,921
Excess of Expenditure over Receipts	-	5,105	-10,862

The net result is a loss of Rs. 10,862. There is an increase under receipts in the Ganges Canals due mainly to demurrage charges, and a considerable decrease in those of the Agra Canal attributable to decrease in grain transport on account of the prevailing scarcity; while expenditure has increased considerably, especially in the Ganges Canals on extensive closure repairs to Chitaura Lock in the Mcerut Division and special emergent repairs to tail works of the Cawnpore Branch. The annual repairs were also more costly than usual, owing to their having been restricted in previous years.

Traffic statistics.—Some details of traffic are given in the following statement:—

			1898-99.		1899-1900,			
	ı	Upper and Lower Ganges Canals.	Agra Canal,	Total.	Upper and Lower Ganges Cauals.	Agra Canal.	Totul.

SECTION IV .- PROGRESS OF WORKS.

Direct outlay of the year compared with grants.—In the following statement the total outlay of the year under the several service sub-heads included in the Budget Estimate of the Irrigation Branch is compared with the original and final grants of the year:—

Head of service.	(), ()	Budget g	rant.
Head of service.	Outlay.	Original.	Final.
Imperial,	Rs.	Rs.	Rs.
Protective Works (Account head 35)	84,734	68,000	78,000
Major Works, Working Expenses (Account head 42)	95,360	82,000	90,000
Ditto, of which the Capital outlay is not charged against Revenue (Account head 49)	10,25,777	8,99,650	10,95,650
Famine Relief Works (Account head 33)			147
Total, Imperial	12,05,871	10,40,650	12,63,650
Provincial.			
Major Works, Working Expenses (Account head 42)	26,86,216	25,82,000	26,69,000
Minor Works (Account head 48—Capital Account)	96,887	1,02,000	1,02,700
Ditto Working expenses	2,04,220	1,85,000	2,03,945
Ditto Works for which nei- ther Capital nor Revenue accounts are kept.	50,732	75,000	71,295
Total, Provincial	30,38,055	29,44,000	30,47,000
GEAND TOTAL	42,43,926	39,93,650	48,10,650

Under Imperial there was a lapse of over Rs. 57,000 due chiefly to the progress of four drains in the Northern Division, Ganges Canal, and several works in the Fatehpur Branch Canal, having been retarded by various hindrances.

Capital outlay on works.—The Capital outlay on "Works" was distributed as below:—

Class,	Works,	Head Works.	Main canal and branches.	Distri- butaries.	Drainage Works	Total.
MAJOR WORKS.		Rs.	Re.	Rs.	Rs.	Rs.

NOTES ON CAPITAL OUTLAY ON WORKS.

Betwa Canal.—The total expenditure on this canal under 35 Imperial, amounted to Rs. 56,418. Good progress was made on the drop-gates for Paricha weir, sanctioned in June 1899 for Rs. 1,48,016.

Ken Canal.—The expenditure on preliminary survey operations amounted to Rs. 13,734.

Ganges Canal.—On the Ganges Canal the total outlay amounted to Rs. 63,712. The most important works carried out under this head were Training works and drainage cuts in the Northern Division, the extension of the Mát Branch in the Bulandshahr Division, and the construction of minor irrigation channels in the different divisions.

Northern Division.—Rs. 10,306 were spent in completing the protection of the east side of Belwalla Island, Rs. 2,138 on the Latherdewa Inspection House, and Rs. 14,519 in commencing the Pinna, Basera, Bijhauli, Dahchand and Gissukhera drains: on all of which good progress was made.

Anapshahr Division.—The chief item of expenditure was Rs. 3,343 spent in completing the Darweshpur minor, and starting work on the Kuri minor, of which the channel was completed.

Meerut Division.—Only Rs. 1,948 were spent on the completion of the remodelling of the Rasulpur minor.

Bulandshahr Division.—The total outlay amounted to Rs. 21,497, of which about half, Rs. 11,320, was spent on the Mát Branch Extension, which was pushed on to irrigate a very dry tract of country, at the tail of the Right Branch. A sum of Rs. 3,481 was spent on drainage, including the Gomat drain; Rs. 3,023 on rebuilding of outlets; Rs. 2,478 on six minors which were nearly all completed, and Rs. 1,195 were spent in commencing the Dádri Inspection House.

Aligarh Division.—Rs. 3,940 were spent in making the Sakraut minor, remodelling the Nuh distributary and building bed-bars, Rs. 1,827 in constructing the Babarpur drain and carrying on the Sengar Nadi improvement.

Lower Ganges Canal.—On the Lower Ganges Canal the total outlay on works, exclusive of the Fatchpur Branch, amounted to Rs. 4,88,617.

Narora Division.—The most important work consisted of special strengthening and protection work on the Narora weir, consequent on the accident which occurred in March 1898. By the end of March 1900 a puddle apron above the weir, a wall of sheet piling across the river, and a dwarf wall on the floor below the weir, were all completed.

The following works were also carried out :-

Reroofing and improving Executive Engineer's office and residence at Aligarh, Mohanpur drain, Bridge over Bagar nála.

Mainpuri Division.—The new Gopalpur Inspection House was completed, also the raising and strengthening of banks of Main Canal. This latter work has been running for some six years and was wound up for Rs. 35,501, against an estimated cost of Rs. 44,129.

Campore Division.—The most important work was the widening of the Branch to enable it to receive an extra supply for the Fatehpur Branch. Good progress was made on the still-water navigation tail works, which consist of a needle dam at Collectorganj bridge, filling in the old docks, and preparations for a new dock. Other miscellaneous works made good progress.

Bhognipur Division.—The Ubhti regulator was completed. The Bahera distributary was also finished during the year. All sanctioned works on the Chatampur distributary, with "the exception of the Sijauli distributary and three minors, were completed and opened.

Fatchpur Branch Division, Lower Ganges Canal.—The total outlay for works was Rs. 1,70,304, and a large number of works were completed during the year. The Branch was formed into a complete Revenue Division on the 1st April 1899, with three sub-divisions, having their headquarters at Cawnpore, Fatchpur and Ajrauli.

Agra Canal.—Total outlay on works was Rs. 12,193. The Asaota drain and the masonry outlets, Hatin distributary were completed, with other minor works.

Eastern Jumna Canal.—The total outlay was Rs. 25,233. On the Upper Division the Nanauta and Pandokheri minors were made ready for kharif irrigation though the accounts could not be closed. A start was also made on the Kuakhera and Sohunjni minors. In the Lower Division the ziladári office at Baraut was well advanced, Sarauli head and supply channel were completed, and good progress made on the Rataul minor. The Kasimpur Kheri drain was also completed and Tera drain marked out.

Dún Canals.—The outlay was Rs. 17,023. The Song supply channel was welk advanced, and land claims on the Kata Pathar Canal settled.

Rohilkhand Canals.—Expenditure amounted to Rs. 48,431. The training works above Kicha Weir were practically completed. The Saidpur Máth distributary was finished, and good progress effected on the Right Choreli remodelling.

Bijnor Canals.—Outlay Rs. 9,593. The Nehtor Canal account was closed. The two new minors recently sanctioned were begun.

EXTENSIONS AND IMPROVEMENTS.

The expenditure incurred on this sub-head was Rs. 3,51,780, distributed as follows:—

Canges Canal 1,04,192 Lower Ganges Canal 54,269 Productive Works Agra Canal 67,318 Eastern Jumna Canal 67,525 Fatchpur Branch 3,03,549 Minor Works Dún Canals 6,525 Rohilkhand Canals 37,099 Minor Works Bijnor Canals 4,147 Jánshi Lakes 460 Total 48,231 Grand Total 3,51,780	Protective Works		Betwa Canal	1+4	111	***	Rs. 7,222

Betwa Canal.—The outlay on works was Rs. 7,222. Considerable progress was made in remodelling the Hadrakh and Harsinghpur distributaries.

Ganges Canal.—Ontlay Rs. 1,04,192. The most of the expenditure continues to be on remodelling distributary channels.

Northern Division.—There was an expenditure of Rs. 27,922, chiefly on the Bahadrabad, Rohalki, Rasulpur and Kherli minors, all of which are approaching completion; Rs. 2,245 were spent on training works and Rs. 3,865 on improvements at Myapur.

Anúpshahr Division.—There was an expenditure of Rs. 4,468 on the regulating piers at the head of the Branch; Rs. 7,033 were spent on a number of distributaries, the most important of which was the remodelling of the Dhakaoli channel. A sum of Rs. 4,450 was spent on extending the Raidhana drain and two other small drainage outs.

Meerut Division.—Rs. 17,372 were spent in remodelling distributaries and constructing new minor channels, the largest being Salawa distributary and the Chandsina and Nagla Kabir minors; Rs. 1,920 on additions and alterations to buildings, and Rs. 1,094 on the Jhitkari drain and two other small cuts.

Bulandshahr Division.—Rs. 9,537 were spent on distributaries, chiefly on the Barauda channel bridges, remodelling the Rajupura minor and on a number of petty works.

Aligarh Division.—The expenditure on revenue work was small, being only Rs. 9,664, chiefly on remodelling the Palra distributary, reroofing two Inspection Houses and providing some bridges on drains.

Lower Ganges Canal.—An expenditure of Rs. 54,269 was incurred on a large number of small works in the different divisions, of which several were completed. The most important were additions to Jalalpur regulator,—Bewar.

Branch; construction of Nagthera and Bhainsroli minors, Bhognipur Division; remodelling of Bewar, Banakia and other distributaries, and the construction of, and improvements to, drains and buildings.

Fatchpur Branch, Lower Ganges Canal.—There was a small expenditure of Rs. 3,023 on distributaries.

Agra Canal.—An outlay of Rs. 67,318 was incurred on 46 estimates, on which considerable progress was made. Tatils were abolished on the Shergarh, Farah and Agra distributaries and on 10 minors. Double grooves and sleepers were provided for the Hindan head, Hindan and Chilla locks. The puddle apron and concrete in front of the Okhla under-sluices was begun in March and completed in April 1900 without closing canal.

Eastern Jumna Canal.—The total outlay was Rs. 67,525. In the Upper Division 50 estimates were current, out of which the remodelling of the Pilkhani, Randoul, Nagla, Sarkari, Megchapper, Chidbana, Manakmau and Kallarpur main distributaries were nearly completed, and several other works completed. In the Lower Division several estimates were current. The Baral remodelling was completed, and considerable progress made on the channels of the Bhadeo, Bamnauli, Erti, Kaserwa, and Kairana distributaries.

Dún Canals.—An outlay of Rs. 6,525 was expended on several estimates, including the masonry bar in the bed of the Tons at the head of the Bijapur and the remodelling of the Fatehpur minor.

Rohilkhand Canals.—The outlay on the canals was Rs. 37,099. A large number of estimates were current, the principal works being the Kicha spurs and the construction of the Sarora Inspection House.

Bijnor Canals.—An expenditure of Rs. 4,147 was incurred on a number of small works.

The following table shows the expenditure on repairs and maintenance during the past two years:—

Class of work.		Canal		<u> </u>	Expenditure on repairs.		
Oracle of words		Callai	'		1898-99.	1899-1900.

	į	Rakshaband, Jhánsi di	strict		194	189	
			Total	,	11,99,197	11,97,178	

The expenditure during the current year was Rs. 2,019 less than that of the previous year. There was a saving on the Head Works, Ganges Canal, due chiefly to the light flood season, but this was more than balanced by extra outlay on closure works and on compensation for land at Myapur.

On the Lower Ganges Canal there was an expenditure of over Rs. 17,000 on account of repairs to damaged portion of floor below Narora weir, while the Betwa Canal, Rohilkhand Canals and Hamírpur Lakes show savings.

Minor Works, neither Capital nor Revenue.—The following statement shows the outlay under "New works" on Minor (Agricultural) Works, for which neither Capital nor Revenue accounts are kept:—

						Outlay.

POST OFFICES.

(a) Imperial Post.

During the year 1899-1900 a slight decrease was reported in the work done in Land revenue and Miscellaneous revenue money orders. The increase in Rent money orders, however, was continued from the previous year. The following figures represent the working under the different heads as compared with those for 1898-99:—

Year.	Lan	d revenue mone	v-orders,	Miscellaneous revenue money orders.			Rent money-orders.			
	Number.	Value.	Commission.	Num- ber.	Value.	Com- mission.	Number.	Valuo.	Commission.	
		Rs. a. p.	Rs. a. p.		Rs. a. p.	Rs		Rs. a. p.	Rs. a. p.

Increase Decrease		1,29,379 4 7	1,830 6 0	1,617	3,602 2 5	235	2,440	1,573 8 9	137 12 0	

The scheme introduced for the sale of quinine by all Post Offices in the Circle still continues to work well, showing an increase of Rs. 238-8-0 on the value of the quinine sold as compared with that sold in the previous year.

The subjoined table shows the number of Post Offices (of all classes) and letter boxes opened and Imperial postmen and village postmen entertained during the year under review as compared with the year 1898-99:—

	Post offices.	Letter boxes.	Postmen.	Village postmen.	Total.
Existing on 31st March 1899 Opened or entertained in 1899-1900. Closed or discontinued in 1899-1900. Balance on 31st March 1900	1,422 13 1,435	2,574 233 2,807	1,633	808 59 862	6,432 805 6,737
Increase or decrease	+13	+233		+59	***

The following table shows the distances over which mails wore conveyed by railways, mail-carts, and runners as compared with those of the previous year:—

Rail	Railways. Mail-carts.		Run	nors.	Total.		
1898-99,	:899-1900.	1898-99.	1899-1900.	1898-99.	1899-1900,	1898.99.	1899-1900.
3,393	3,404	6111	629 }	2,327	2,361	6,3311.	6,3941

Delivery work shows the following results as compared with the year 1898-99:---

	1898-99.	1899-1900.	Increase.	Increase percent- age 1899-1900.
Number of articles issued for delivery Ditto returned undelivered Ditto actually delivered Percentage of undelivered articles	63,874,096 1,406,808 62,467,288 2·202	65,010,062 1,402,084 68,518,028 2·209	1,1 35966 85,226 1,050,740	1.77 6.95 1.68

The above figures include the articles that were returned by postmen and village postmen for re-direction and those for deposit, so that the number of articles actually undelivered were considerably less.

The number of insured articles sent through the post during the year under review as compared with the figures for the previous year are shown below:—

				- سارس			
					1	1898-99.	1899-00.
Number of articles		§ Letters	***	***		6,555	8,111

Amount of insurance fee	***	***	•••	***	•••	Rs. 11,802	Æs. 12,374

The noticeable features in the figures of this statement are the increase both in number and value of letters and the decrease in number and value of parcels insured. The subjoined table shows the money order transactions during the year under report as compared with 1898-99:—

		Issues.	Payments.			
Year.	Number of money- orders.	Value,	Commission charged.	Number of money- orders.	Value.	
1898-99 1899-00		R ₈ , a P. 3,03,57,954 9 3 3,21,95,257 9 1	Rs. a. p. 4,05,816 10 0 4,20,790 1 0	2,496,741 2,592,088	Rs. a. p. 4,69,00,117 15 3 4,99,49,175 14 11	
Increase	102,452	18,37,302 15 10	14,982 7 0	95,347	30,49,057 15 8	

The number of British postal orders of all classes sold was 12,223, aggregating in Indian currency Rs. 1,17,363-1-0, and the commission realized amounted to Rs. 737-8-3 against 10,734 aggregating Rs. 1,02,953-8-1, and commission realized of Rs. 644-11-6 in the year 1898-99.

The following is a comparative statement showing the business done by the Savings Banks (which numbered 889 as against 861 in the previous year) in the United Provinces Postal Circle:—

	Numb accor	er of unts.		Deposits.			thdrawals.	Balance at credit of deposi- tors.	
Year.	Opened.	Closed.	Number.	Amount.		Number.	A mount.	Amount.	
		 -	_ 	Rs. a	. p.		Ra. a. p.	Rs. a. p.	
1898-99	28,572	20,991	154,760	62,77,331	7 0	97,168	58,84,194 6 9	78,96,571 6 7	
1899-00	27,076	19,584	159,522	69,18,250	0 6	106,626	58,46,123 14 9	78,99,791 11 5	
Increase Decrease	1,496	1,407	4,762	3,64,071 1	3 6	9,458	38,070 S O	3,220 4 10	

There were altogether 1,385 complaints dealt with during the year under report as against 1,250 in the previous year, showing an increase of 135. Of these 468 complaints were proved to be well-grounded, 510 groundless, and in 315 cases the inquiries were unsuccessful; 92 complaints were at the close of the year being investigated.

The total number of offences committed by Postal servants and punishable by law was 23 as compared with 51 in the previous year. The convictions were 16 against 32 in the previous year.

There were 12 cases of highway robbery of mails in the year under review as against S during 1898-99. No highway robbery was reported from native territory.

During the year under report 583 articles containing valuable property, amounting to Rs. 20,873-7-11, were received in the Dead Letter Office. Of this

amount the Dead Letter Office was successful in delivering to the addressees or the senders property valued at Rs. 19,256-7-5. The balance was in deposit at the close of the year.

Ten combined offices were opened during the year under report, and the number of such offices open at the close of the year was 164 as against 160 at the close of the previous year.

(b)—District Post.

The following table gives the total number of Post Offices and letter-boxes which existed, and of village postmen employed, at the commencement and at the close of the year 1899-1900.

	District post offices.	Letter boxes.	Postmen.	Village postmen.	Total.
Existing on 31st March 1899 Opened or entertained in 1899-1900 Closed or transferred to Imperial Establishment in 1899-1900.	279 2 7	727 65 43	***	604 5 10	1,610 72 60
Balance on 31st March 1900 Increase Decrease	274 5	749 22 •••	4=1 144 224	599 5	1,6 22 12

Two district Post Offices (one at Kamier in the Garhwal district, and one at Poppéganj in the Gorakhpur district) were opened during the year under report and five were closed or transferred to the Imperial establishment. In previous years' reports two Fair Post Offices, viz. Batesar and Dhaighat, were included in the number of District Dak Post Offices, but as they were only temporary offices they have now been expunged from the figures. Sixtyfive letter-boxes were set up in new localities or were transferred to the District Dak Department from the Imperial establishment during the year, and 43 letter-boxes were closed or transferred to the Imperial establishment from the District Post during the year under review. Five new village postmen were entertained during the year, viz. two at Mansiari and one at Saniodiar in the Almora district, one at Ruhana in the Benares district, and one at Peppéganj in the Gorakhpur district.

The total length of District Dak lines in the United Provinces over which mails were conveyed during the year under report was 8,912\frac{1}{4} miles as against 9,208\frac{1}{4} miles in the previous year, giving a net decrease of 296 miles.

The following table gives in abstract the total number of articles posted and delivered at the several District Post Offices during 1899-1900 compared with that of the year 1898-1899:—

	Year.				eived from (espatch by In offices.	listrict post mperial post	offices for	Articles sent from Imperial post offices for delivery by district post offices.

 ...
 3,255,187
 3,343,893

 Posted for despatch
 ...
 ...
 2,016,542
 1,982,166

The above figures show an increase of 2.7 per cent in the number of articles received for delivery as compared with the figures for 1898-1899 and a decrease of 1.7 per cent in the number of those posted for despatch.

The total number of articles returned undeliverable by District Post Offices during the year under report was 169,173, which gives a percentage of 5.05 on the total number received for delivery, as compared with a percentage of 5.5 in the previous year.

The total cost of maintenance of the District Post Offices in the United Provinces during the year was Rs. 1,83,311-5-0, detailed below:—

North-Western Provinces 1,44,286 8 9
Oudh 39,024 12 3

The Budget allotment for the year under report, as well as for the previous year, was Rs. 1,92,000.

CHAPTER V.

REVENUE AND FINANCE,

A.—Imperial Revenue and Finance.

1.-LAND REVENUE, NORTH-WESTERN PROVINCES AND OUDH.

The year ending 30th September 1899 was a distinctly less prosperous one for the agricultural community than the exceptionally good year which preceded it. The seasons were less favourable for the crops, and lower prices further reduced the money value of the diminished outturn.

The total rainfall was ample, averaging 47½ inches; but in the western districts the monsoon of 1898 practically ceased to give rain after the first half of September, while further east unusually heavy rainfall caused considerable damage. The winter rains were light, but beneficial. In the two western divisions of Mecrut and Agra the outturn was generally good; in the two eastern divisions of Benarcs and Gorakhpur the autumn crops suffered from excessive rain, and the indigo crop was specially bad owing to this cause. The spring harvest was in places above the average, but, on the whole, was inferior to that of the previous year. The winter was an unusually cold one, and much damage was done by frost, especially to arhar and gram. The damage caused by hailstorms and floods was nowhere on such a scale as to necessitate remissions of revenue. Widespread complaints were made of the damage done by field rats, but the loss actually suffered from the ravages of this pest appears to have been less than was at one time anticipated.

Towards the close of the revenue year, that is, in the autumn of 1899, the outlook was extremely unfavourable. After heavy and continuous rainfall in June and July 1899, which did much damage, there were breaks in July and August, followed in the western part of the Province by light and insufficient rain. The position gave ground for much anxiety, but happily rain in September removed all cause for serious uneasiness, except in some of the districts to the south-west of the Provinces, where there was practically no rain, and where in consequence arrangements to provide for the possible approach of famine had to be made.

The public health remained fairly good, and, except for a few outbreaks of cholera, there was little epidemic disease. There was, however, a general increase in the mortality amongst cattle, and both foot-and-mouth disease and rinderpest were prevalent. Advantage was taken of the opportunity afforded by rinderpest epidemics to make some experiments as to the value of inoculation. When explained to the people, it was found that the experiments did not excite opposition, and the results, though on a small scale, indicated that effective protection against the disease might be given by the operation. In other directions some progress is being made in spreading a knowledge of the steps that should be taken to protect cattle during epidemics, and the influence of the veterinary staff is beginning to have some slight effect. Much, however, requires to be done, and a very large increase to the staff will be necessary before any real advance can be made in combating the ravages of cattle disease.

The rapid fall of prices after the scarcity of 1896-97 attracted attention last year. At the beginning of 1898 prices were still high, but by the end of the calendar year a very low level had been reached, and the average prices for the whole year were in some districts below the average of the years preceding the famine,

Thus in Cawnpore the average price of the five grains wheat, barley, juár, bájrá, and gram throughout the year was approximately 21 sers per rupee, as compared with 20 sers in the five years 1891 to 1895. The violent oscillations of prices. during the year require to be constantly borne in mind in any attempt to appreciate its economic and commercial conditions. On the 1st of January 1898, or just before the beginning of the year under review, gram was selling at Cawnpore at 104 sers per rupee, or at a higher price than wheat. A year later the rate was 23½ sérs, or considerably less than half of what it had formerly been; and this low range of price was maintained to the end of July 1899, when the apprehensions caused by the apparent failure of the monsoon, the certainty of severe famine in other parts of India, and the possibility of its extending to these Provinces caused a rapid rise. In August the rate for this grain at Cawnpore was 18 sérs; in September it was below 13. Similar, though less violent, fluctuations occurred in the case of other grains. Thus wheat, the price of which is less subject to purely local influences, was selling at 11 sérs per rupee in Cawnpore in January 1898, and at 16½ sérs a year lator. From March to June 1899 the rate varied from about 18 to 16 sers, while by September only 11 sers could be obtained for a rupee.

The amount of land revenue due on account of the year 1898-99 was 619½ lakhs, as compared with 614½ in the previous year, the increase of 5 lakhs being accounted for by enhancements in Meerut, Bijnor, and Budaun, and the majority of the Oudh districts. The collections were 606 lakhs, leaving over 13 lakhs outstanding at the close of the year. Of this sum, however, 4½ lakhs were nominal and the real balance was under 9 lakhs of rupees.

The Meerut, Agra, and Kumaun Divisions showed a nearly clear balance sheet, and in Oudh the real balances were comparatively small. But in the districts of Shahjahanpur in the Rohilkhand Division, Jaunpur in Benares, and Azamgarh in Gorakhpur, and in most of the districts of the Allahabad Division, the arrears were heavy. In Jaunpur and Azamgarh the large balances are attributed to some extent to ineffective management and supervision. The latter district is not at present in a prosperous condition, but better results would probably have been attained with more effective control. In Jaunpur also the management appears to have been slack. The state of the revenue collections in Shahjahanpur has for some years been unsatisfactory. The expiring settlement was not a successful one, and portions of the district suffered severely in the famine; but, after making allowance for all difficulties, the Lieutenant-Governor agrees with the Board that sufficient care has not been given to the revenue administration of this district. The Allahabad Division, in which two-thirds of the arrears accrued, suffered more severely than other tracts in the famine and has had less favourable seasons since. Part of the division is again on the verge of famine, and south of the Jumna prospects are nowhere favourable. Steps were taken after the famine to reduce excessive enhancements; but the deterioration, which was then believed to have reached its maximum, has gone on increasing, and further measures of relief may be required if there is not an early improvement. For the present direct management of estates and annulment of settlement have been largely resorted to.

Further substantial progress has been made during the year in clearing off the arrears left over from the famine period, though it has not been found possible to collect the balances in the time originally anticipated. At the beginning of the year the arrears were 86 lakhs of rupees, or somewhat more than half of the total amount originally suspended during the famine. Of this sum, 49 lakhs have been recovered, and, after allowing for remissions, the balance of old arrears outstanding was brought down by the close of the year to 29 lakhs of rupees. The method of dealing with the arrears in the districts in which they are heaviest has formed the subject of much correspondence during the year. On the one hand, it is undesirable that there arrears should be kept hanging indefinitely over the heads of the people; on the other, the Government has already granted remissions to an extent without

any parallel, and there are not wanting indications that the result has been in places to encourage a spirit of recusancy, and a tendency to struggle against payment in the hope that payment may eventually be excused. As a rule, therefore, the Lieutenant-Governor has considered it sufficient to extend the time allowed for payment of the old arrears, though in some cases it has been necessary to grant further remissions. The total uncollected arrears now amount to 13 lakhs on account of the current demand and 29 lakhs on account of the uncollected balances of previous years, and, having regard to the unfavourable outlook at the close of the year, this result cannot be regarded as altogether unsatisfactory.

The demand on account of occupier's rates for canal water was, as usual, collected practically in full. As a consequence of the favourable rainfall, there was again a decline in the total amount, the demand being 67 lakhs, as compared with 72 in the previous year, and 82 lakhs two years ago. Owing to the extension of the Lower Ganges Canal to Fatchpur, that district for the first time appears in the returns, and it may be noticed that the District Officer appears to have overlooked the necessity of collecting the demand punctually.

The most important State properties are the Dudhi Estate in Mirzapur and the large estates in the Kumaun Division, regarding the management of which separate reports are submitted to Government. The total rental demand of all the estates rose from Rs. 8,11,575 to Rs. 8,39,191, but the increase is more than accounted for by the improvement in the rent-roll of the Tarái Government estates. In those estates the rental was practically collected in full; elsewhere the collections did not quite reach 70 per cent. of the demand, which, though better than in the previous year, still showed that the condition of the estates was far from satisfactory. Some explanation of this may be found in the fact that the largest estates, other than those already mentioned, are in districts of the Allahabad Division-Allahabad, Bánda, and Jhánsi,-where the seasons have not been favourable and where agriculture is still in a depressed condition. In Mirzapur also a very large sum remained uncollected. The Lieutenant-Governor observes with satisfaction that the Board have called attention to the necessity of a more liberal expenditure on improvement of the properties belonging to Government, and on advances to enable the tenants to tide over bad seasons. It is the duty of Government in estates belonging to itself to present an example of liberal and advanced management, and to make every effort to maintain the agricultural condition of its properties in the highest state of efficiency.

The use of the money-order system in remitting revenue and other dues continued to spread, and its drawbacks and advantages are discussed in some of the reports. There is no doubt that the system must have the effect of weakening the position of the lambardars, who already in many places have ceased to be an active agency for the representation of their co-sharers, and it must be considered, when the legislation for strengthening their position proposed in the Land Revenue Bill comes into force, whether any check on the practice of receiving revenue direct from co-sharers is necessary. The decrease in money-orders in Basti, owing to the steps taken to prevent the harassment of co-sharers bringing their revenue to the tahsil, affords a suggestive indication of some of the reasons that make for the popularity of the system. If it were possible to enforce on the officials at all subordinate offices a habit of promptitude and businesslike procedure in their dealings with the public, the business of the administration would, in all departments, be facilitated; and, while progress in this direction must necessarily be slow, owing to the difficulty which everywhere exists, but which is nowhere greater than in this country, of escaping from dilatory and harassing practices which have become traditional, the Lieutenant-Governor is not without hope that, with the better educated agency which is rapidly becoming available at subordinate revenue offices, much may be done to improve the methods in use; and he would be glad to see endeavours on the part of all District Officers to impress on their tahsildars and naib tahsildars the necessity of recognising that, while the payment of Government dues must be strictly enforced, the actual process of payment should, by punctual and intelligent arrangements, be made as little troublesome and take up as little of the time of the taxpayer as possible.

The number of suits under the Rent Act instituted in the North-Western Provinces has increased from 116,875 to 124,221, or by 6.29 per cent. The number of applications has, however, fallen from 176,827 to 158,360, so that the combined total shows a decrease of 11,121, or 3.79 per cent., as compared with the preceding year.

An interesting table has been furnished by the Board, showing that, since the passing of the present Rent Act, the number of suits filed has increased steadily, with scarcely any check except in the famine year of 1896-97. The number of suits filed during the year under review was by far the largest on record; the increase over the figures of the previous year was, however, entirely in suits for arrears of rent, which comprised more than 91 per cent. of the total litigation. In other respects the fluctuations call for no remarks. The Rohilkhand Division alone showed a decrease in the number of rent arrear suits, while the increase was largest in Gorakhpur and Allahabad, the latter of which accounted for an increase of 4,697 institutions, or nearly two-thirds of the excess in the whole Province. Nearly half of this was due to the Allahabad district, where the large increase in resort to the courts was attributed to the growth of the practice of individual co-sharers suing separately for their share of rent.

The proportion of contested cases has risen slightly, but still amounted to only 21.39 per cent. of the whole number, while 45.41 per cent. of the cases filed were disposed of ex-parte. The pending file at the close of the year rose from 5,886 to 6,055 cases, a result not unsatisfactory in view of the increase in the volume of litigation. The Agra Division, with a pending file of 585 cases, or 3.1 per cent. of cases instituted, and with the lowest average duration of contested cases, showed by far the best results; while the least satisfactory were in Benares, where, at the end of the year, there were 1,556 cases pending, and where the average duration was over two months to each contested case. The Ballia district had no less than 319 cases pending for more than three months, and in this and the Azamgarh district, after every allowance is made for the greater complexity of litigation in those parts, better supervision over the working of the courts appears to be called for.

There was a slight increase of 1.8 per cent. in the amount of rent remitted by money-orders in the united provinces, the total amount being Rs. 9.31,190, as compared with Rs. 9,13,858 in the previous year. There has been a marked increase in Bijnor and Bulandshahr, which between them accounted for nearly two and a quarter lakhs, and in Mirzapur. Recourse to this method of payment is usually considered to indicate some degree of distrust on the part of tenants towards landlords, and the enquiries made in Muzaffarnagar go to show that this explanation is correct. In Bijnor, where such payments are very numerous, the explanation appears to be that the tenants desire to prevent any reversion from cash to kind rents, the practice in a large part of this district being to change periodically from the one class of rents to the other. This mode of paying rent appears never to have gained ground in Oudh. In the past year the amount remitted in Oudh, which in 1894-95 was 7.2 per cent. of the combined provincial total, only formed 4.9 per cent. of the whole. It is again satisfactory to notice the extension of the practice of giving printed receipts, though in the Benares and Gorakhpur Divisions, where the litigious character of the people renders its introduction particularly desirable less progress has been made in this direction than elsewhere.

The number of applications under the Rent Act amounted to 158,360, which was considerably less than in the previous year and was only slightly in excess of the average, 154,168, of the last ten years' figures. The decrease, as compared with

1897-98, was almost entirely due to the diminished number of applications connected with the ejectment of tenants-at-will. A substantial decrease of 2,280 in the number of enhancement cases has been more than counterbalanced by an increase of 2,467 in applications to eject tenants with rights.

The percentage of cases in which ejectment of privileged tenants actually took place rose from 32.58 to 33.70. The divisional returns vary considerably, the percentage exceeding 40 in Rohilkhand and Allahabad, and falling considerably below 30 in Meerut and Benares.

All divisions, except Gorakhpur, showed a decline in the number of notices of ejectment issued against non-occupancy tenants, the decrease being most considerable in Meerut and Rohilkhand. The decrease was as remarked by the Board noteworthy, and it was accompanied by a corresponding decrease of 5.52 per cent. in the area affected by the notices issued. The figures of the previous year were, however exceptional, and the decrease cannot be taken as indicative of any change in the policy of landlords in dealing with tenants who have no rights. Probably the fact that the free exercise of the power to eject tenants-at-will was brought under examination in the discussion on the revised Rent Bill had something to do with the decrease. The proportion of notices contested rose from 24 to 26 per cent., and the landlords were, as in the previous year, successful in about half of the cases contested

The pending file of applications at the close of the year showed a reduction from 16,569 to 13,099. The results, on the whole, were creditable to the courts concerned, as of the pending balance no less than 10,393 cases were concerned with enhancement or determination of rent or the ejectment of privileged tenants, all cases of a complicated character, many of them involving local inspections. The Ballia district is unfavourably mentioned as having 392 cases pending for over three months at the close of the year.

It is satisfactory to notice that in the Allahabad district, which was mentioned very unfavourably in this connection last year, a marked improvement has been effected, but in other districts, notably Pilibhít and Aligarh, special attention and supervision to prevent prograstination is called for.

Notices of relinquishment of tenant holdings exhibited no marked fluctuation except in the Allahabad Division, where the number increased by half and where more relinquishments were filed than in all the other divisions together. The Commissioner is of opinion that many of these relinquishments are not purely voluntary, but this explanation cannot in any way account for the increase. The landlords would not in these depressed tracts put pressure on their tenants to abandon their lands. The figures, as remarked by the Board, are clearly indicative of the unsatisfactory position of agriculture in Bundelkhand at present.

In Oudh, where the distinction between suits and applications existing in the North-Western Provinces does not obtain, there has been a continued increase in rent litigation of 4.80 per cent., as compared with an increase of 20.42 per cent. in the previous year. The latter increase, however, only represented a return to normal conditions after the famine year. As in the North-Western Provinces, the increase was entirely due to the rise in the number of suits for arrears of rent, which numbered 28,287 as against 26,214 in the preceding year,

The only other classes of suits which exhibited any significant change were suits contesting enhancement or ejectment and suits for arrears of revenue, which have increased by 233 and 316 respectively, and suits for recovery of occupancy and suits connected with distraint, which have declined by 819 and 251, or 37 and 36 per cent., respectively.

The increase in suits for arrears of rent is attributed to a desire to prevent arrears of 1303 fasti from becoming barred by limitation, and a reluctance on the part of tenants to sell their produce during the time that low prices prevailed.

The pending file increased from 1,993 to 2,378 cases, a result hardly satisfactory, but largely due to one district, Gonda, which accounted for no less than 1,348 of the cases. The heavy litigation in that district was due to activity in the management of one large estate, and the staff had to be temporarily strengthened.

The remarkable increase in the number of notices of ejectment, commented upon last year, has not been maintained, the figures of the year being 13,196 as against 13,232. The area affected has, however, rison in a remarkable degree, from 145,257 to 424,478 acres. This increase is explained as being fortuitous, and due to the ejection of a number of lessees in the Bhinga estate in Bahraich district.

Enhancements of rent in excess of the statutory limit were reported from several districts. In one estate in which these were extensively made, enquiry was ordered by Government and the rents were reduced.

Kumaun again differs from the rest of the Provinces in showing a slight decrease in litigation, the number of suits instituted having fallen from 760 to 730. In spite of the small number of institutions, 122 cases remained pending at the end of the year, 90 of which belonged to the Almora district. The average duration of contested cases rose to 2 months and 24 days in this district.

There has been a further increase from 4,052 to 4,870 in the number of appeals to Collectors, and, generally speaking, this branch of the Collector's work was performed with despatch. The percentage of decisions unmodified has fallen from 56 to 55, while reversals have increased from 22 to 23 per cent.

The number of appeals to Judges rose from 1,913 to 2,085, but the percentage of appeals filed to appealable suits showed a slight but satisfactory decrease from 23 to 19. The pending file, in spite of a marked reduction in the average duration of decided cases, has risen from 1,441 to 1,648, towards which the Benares Division contributed no less than 678.

In Commissioners' Courts the opposite condition prevailed, a slight decrease in the number of appealable cases, being accompanied by an increase of 9 per cent. in the appeals filed. The pending file has in consequence risen from 1,499 to 1,848 cases.

The number of appeals summarily rejected has again largely increased. The free resort to this power in Meerut was commented upon last year, but no explanation of the further increase from 226 to 259, which has occurred in the year under review, has been furnished. The Lieutenant-Governor agrees with the Board that adequate reasons should always be given when this procedure is adopted; and when recourse is had to it as freely as in Meerut, the circumstances should be explained in the annual report.

The number of fresh cases which came before the Board of Rovenue for disposal fell from 3,761 to 3,095. The number of cases decided within the year amounted to 3,326, as compared with 3,922 in the previous, but, owing to the decrease in institutions, the pending file was reduced from 680 to 429 cases. The orders of the lower courts were modified in 10.85 per cent. of the cases from the North-Western Provinces, and in 15.2 per cent. of the Oudh cases.

The returns of coercive processes employed in the collection of the revenue indicated greater difficulty in securing its realization. Fewer writs of demand were issued in both the North-Western Provinces and Oudh, but the number of processes employed other than writs increased in the North-Western Provinces from 13,147 to 16,173 and in Oudh from 3,099 to 3,252, while the arrears for which these severer processes were used amounted in all to Rs. 42,69,940, as compared with Rs. 39,56,620 in the previous year. The most noticeable increases were in the attachments of movable property in which sale had actually to be enforced, and in annulments of settlement followed by direct management. The decrease in the number of writs was probably owing to the instructions issued to regulate the use of this process and to prevent resort to it where it was obviously unnecessary or useless. Free use was

made in the Hardoi district of the authority to summon the defaulter to appear, given by section 114 of the Oudh Land Revenue Act, and the existence of this power possibly explains the comparatively small number of arrests in Oudh as compared with the North-Western Provinces. In the latter Province arrest was followed by detention in only 1,538 cases out of 3,577, while in Oudh 361 persons out of 455 arrested were actually detained. These figures go to show that the power of arrest is used in the North-Western Provinces as a means of securing the attendance of the defaulter, a result which can be attained in Oudh by a simple summons. No use was made in Oudh of the special power given by section 116 of the Land Revenue Act of confining defaulters in the civil jail for a period of six months, and in recent years generally this power, which it is not proposed in the new Land Revenue Bill to retain, has been very sparingly made use of.

In the Allahabad Division, where many of the proprietors have become seriously involved, recourse has largely been had to annulment of settlement, followed by direct management. Only in this way can the real assets of the properties be ascertained, and the extent to which non-payment is owing to undue severity in the assessment be determined. The Lieutenant-Governor regrets in these circumstances that the management of estates under attachment has not been satisfactory. Care must be taken to secure a competent staff, and to see that the management is supervised with the same care as Court of Wards work, especially in districts where a large extension is being given to the system of direct management after annulment of settlement. In the case of attached estates there is no doubt greater difficulty in securing good management, as 'the attachment may be temporary, but it is unsatisfactory to find that in some cases no adequate efforts were made to bring the estates under proper management.

It is difficult to draw any satisfactory conclusions from the statistics of transfers and mortgages during a single year. But the figures for the year under report were, on the whole, not unsatisfactory. There has been some increase in sales by order of court, but in all the divisions of the North-Western Provinces, except Allahabad, there has been a decline in the number of sales and mortgages, which may reasonably be attributed to returning prosperity. There has also been a very marked increase—an increase of over 40 per cent.—in the number of redemptions of mortgages, which might be taken as a further satisfactory sign, were it not that a large proportion of the cases occurred in the Fyzabad district, where the registers were under revision, and they probably therefore represented the transactions of several years.

As the seasons were favourable during the greater part of the year, there was comparatively little demand or necessity for agricultural advances, and the amounts advanced on loan fell from—

Rs. 72,138 under the Land Improvement Loans Act to 65,086 3,54,100 ,, Agriculturists' Loans Act to 1,48,654

At the close of the year, owing to the deficiency of rainfall in the western districts, arrangements had to be made for the grant on a much more liberal scale of taques, but these transactions have not affected the accounts of the year under review.

The collections of outstanding balances were not good, only 72 per cent. of the amounts due under the one Act and 50 per cent. of those due under the other being actually repaid. These bad results were, however, due to the impossibility of realizing the large outstandings in the Allahabad Division. The people had, in the first place, to meet the demand for revenue and had not the wherewithal to repay advances of taqávi. At the same time some progress was effected in reducing the large aggregate of debts outstanding on account of advances taken in the famine years, the balances being reduced from Rs. 11,65,362 and Rs. 14,53,994 at the end of the previous year to Rs. 8,69,344 and Rs. 8,84,559 respectively at the close of the year under review. After very careful examination of the conditions of the borrowers concerned, a large sum due in the Allahabad Division has been written

off; but the burden which has been laid on the agricultural classes by the famine is still heavy, and, unless the seasons continue favourable, further remissions of the outstanding balances may be inevitable.

There was an increase from 967 to 1,204 in the number of applications to received during the year of the dilatoriness and ineffectiveness of the action taken by the revenue authorities on such applications, and these complaints proved on enquiry not to be devoid of foundation. The question has been energetically taken up in the Fyzabad Division, which is principally concerned, by the Commissioner, Mr. Hooper, and, notwithstanding the increase in the number of applications, the arrears outstanding at the end of the revenue year amounted only to a lakh, as compared with a lakh and a half twelve months before. This is a considerable improvement, and further improvement may be expected from the Commissioner's action; but it requires to be impressed on the staff that, when Government undertakes the collection of arrears of rent as land revenue, the same care must be given to the matter as is shown in the collection of the revenue.

Reports of the completion of settlement operations in six districts and in the Lalitpur sub-division of Jhansi were received during the year. reports are now submitted with much more punctuality than in former times, but there has been delay in the case of Fyzabad and Budaun, the reports of which district should be expedited. Settlement work in Meerut, Shabahanpur, Kheri and Bahraich is now approaching completion, and in Bareilly and Almora the work of assessment has begun. The assessments made in all districts have been very carefully examined by the Board and the Government with a view to preventing the imposition of demands which would press too heavily on the landowning classes, while at the same time securing for the Government the increased revenue which the progress of the country and the change in the value of money entitles it to receive. The proposals of the Settlement Officers have in individual cases required frequent alteration, generally in the direction of increased moderation in the assessments, and with these changes it has been possible for the Government to confirm the settlements in all districts, except Hardoi, a district which was thrown back by the severity of the famine, and in which the proposals. of the Settlement Officer could not be accepted without further enquiry.

Survey and record writing operations were completed in Bareilly, Kheri, and the hill parganas of Naini Tal district. They were continued in Gonda, and commenced in Farukhabad, Azamgarh, and Pilibhít. An area of 3,312 square miles was surveyed, and training in survey work given to 1,720 patwaris, 59 kanangos, and 263 apprentice kanangos.

The general character of the patwaris' work as surveyors appears, both from the report of the Superintendent of Surveys and from the opinions expressed by the Settlement Officers of Kheri and Bareilly, to have been very satisfactory. As record writers they are incomparably superior to the occasional outside amins, who will be displaced by the introduction of the two years' system.

Continued efforts have been made to improve the standard of qualification of patwaris, and the percentage of passed men has risen from 84.92 to 86.51 per cent. The number of exempted patwaris has been reduced from 3,093 to 2,718, and the percentage of unexempted patwaris, who have still to pass, has fallen from 4.34 to 3.90.

The percentage of passed patwaris was over 99 in Bijnor, and exceeded 95 in Etawah, Jalaun, Gorakhpur, Sitapur, and Bara Banki, but it fell below 75 in Saharanpur and Rae Bareli, and in Allahabad only amounted to 65. Progress must necessarily be slow in filling all posts with qualified men, but the special attentions of the District Officers in the three last mentioned districts should be given to obtaining a better class of men for the post.

About three-fourths of the patwaris were, as in the previous year, returned as resident in their circles. The statistics showed a satisfactory proportion of resident patwaris only in the Agra Division, the Bundelkhand districts, Gorakhpur, and Basti. The whole of Oudh and Rohilkhand furnished very poor results, while in Allahabad district nearly half the patwaris were non-resident. The experiment tried in Basti of giving advances to patwaris to build houses was reported to have been attended with success.

Thirty kanúngos were promoted temporarily to náib tahsíldárships during the year, but the Director has noted with disappointment that no permanent promotion to a náib tahsíldárship was given during the year. As a class the kanúngos have not the educational qualifications now required in náib tahsíldárs, but better educated men are being introduced as vacancies occur.

The annual examination of candidates for kanungoships gave very poor results, only 37 candidates out of 234, or 15 per cent., as compared with 29 per cent. in the preceding year, passing completely. The Director has reported the majority of the candidates to be badly educated and generally unfit for supervisorships. The question of restricting the admissions to these examinations was raised by Government last year. The report for the year under review indicates that it is a matter for consideration whether admissions to kanungoships should not be confined to men who have passed through the Agricultural School, and the examinations at divisional centres be dispensed with altogether, as at present it is found impossible to provide all the men who have passed through the School with situations.

It is satisfactory to learn that the amount of field testing by kanúngos has been, on the whole, sufficient, and that a general improvement has been effected both in the checking of rent-rolls and in the re-testing by superior officers, though, as the Director has pointed out, the re-testing done requires to be more closely directed to the check of the kanungos' work.

The very marked improvement in the punctuality with which the annual papers were filed was satisfactory. Where the papers were not filed promptly, the delay was in many cases owing to survey and settlement operations being in progress.

The pargana books in some districts have been intelligently utilized; but elsewhere proper attention has not been given to the checking and keeping them up. Instructions on this subject have been issued from time to time, and the Director should in future report the districts in which it has come to his notice that these instructions are not complied with.

The notes by the Director of Land Record and Agriculture on precarious tracts in various parts of the Provinces, abstracted from information given by District Officers, do not call for notice. The Director is now engaged in ledgering and systematizing the information available regarding the liability of each district to agricultural deterioration; it would be interesting to find in his report some information of the progress made in this work, and any facts of importance elicited.

The reports of District Officers were written at a time when there were grave reasons to fear that portions at least of many districts in the Province would not escape from the famine from which other parts of the country were already suffering. Nevertheless these reports, as a rule, represent the year ending in September 1899, as having been in itself a not unsatisfactory one, and the experience since gained fully confirms this view. The low prices of the early part of the year were of material benefit to the labouring and urban classes, though, on the other hand, they appear to have led to depression of trade, and to increased difficulty in the collection of rent and revenue. Several reports refer to the losses sustained by the sugar and indigo interests, and grain was stored in the hope of better prices not only by regular traders, but also, there is reason to believe, in large quantities by agriculturists themselves. Consequently, when prices rose, owing to the apparent failure of the monsoon, and the news of famine in surrounding Provinces, food stocks

were unusually large, and the export trade rapidly attained unusual dimensions. Grain was exported as fast as the railways could remove it; indeed, many complaints have been made of the inability of the railways to meet the traffic, and there has been no indication as yet that the exports were in excess of the quantity that could easily be spared. Nor has there been any marked sign of the pressure of high prices on the labouring classes. The briskness of trade, and necessity towards the end of the year of utilizing all possible means of artificial irrigation, created a sharp demand for labour, which in many districts caused an appreciable rise in wages. In the Agra and Muttra districts, from which the monsoon had entirely withdrawn at an early date, test works were opened after the close of the year under report, but there was no such pressure as to make famine wages attractive, and the works had to be closed. It is believed that the traffic in grass, an entirely new industry, which sprang up in those districts to supply the wants of Rajputana, afforded work for some time to large numbers of the labouring classes. wanderers from the western Native States, numbers of whom were forced by the drought to cross into these Provinces, appear to have been absorbed, or to have found occupation without difficulty; and no recourse has been necessary to special measures for their relief. All these circumstances occurring after the close of the year sufficiently indicate that, if not so prosperous as the year preceding, it was by no means an unsatisfactory one on the whole. The trans-Jumna tracts of Bundelkhand still form an exception to the generally favourable condition of the Provinces, and their slow recovery from the effects of the previous famine will be still further retarded by the losses of the past year. The administration of those districts must for some years, even in the most favourable circumstances, tax to the utmost the ability of the officers in charge.

The material development of the Provinces has been furthered by the opening of the Bengal and North-Western Railway extensions in the Benares Division, and of the Hardwar-Dehra and Ghaziabad-Moradabad Railway lines; while other projects are in hand or in contemplation. The opening of the Fatehpur Branch of the Lower Ganges Canal also calls for notice.

Financial results.—The total real receipts of the year amounted to Rs. 59,73,691, as compared with Rs. 48,43,308 in the previous year, an increase of 23.34 per cent. These receipts were the highest hitherto recorded in these Provinces, and the following table gives a comparison with the revenue of the five previous years under the main heads of receipt:—

6.—Excise.

Heads of receipt.	1893-94.	1894-95.	1895-96.	1896-97.	1897-98.	1898-99,
Country spirits English liquor Drugs Opium Tari Fines and miscellaneous,	Rs, 38,50,765 3,62,777 7,57,958 7,90,097 89,246 1,820 58,52,663	Rs. 36,20,838 9,85,261 7,83,060 7,68,736 85,812 1,901 56,48,608	Rs. 32,98,599 4,18,672 7,99,342 6,77,884 89,443 2,471 52,86,411	Rs. 23,78,121 4,32,199 7,41,030 5,99,437 82,413 1,495 42,29,695	Rs. 28,03,757 5,16,087 8,14,056 6,10,598 96,026 2,784 48,43,808	Rs. 86,78,753 5,44,971 9,96,970 6 48,480 1,02,732 1,785 59,73,691

These figures, which show that the increased receipts were distributed among all the main heads of revenue, demonstrate conclusively the improved condition of the consuming classes in the Provinces during the year. The rise is especially notable in Oudh, where it comes to 32.89 per cent., against 20.43 per cent. in the North-Western Provinces, the recovery of the smaller Province from the effects of the famine having been remarkably rapid.

The total charges in the Department, the incidence of which on real receipts was 1.75 per cent., rose from Rs. 93,800 to Rs. 1,04,846, chiefly owing to increased payments for rewards and refunds.

Country liquor.—In only three districts was a change of the excise system found advisable or feasible. In the Naini Tal district, where farming has hitherto been in force, the outstill system was successfully introduced, with the result that license fees rose by Rs. 12,800. In the Roorkee tahsil of the Saharanpur district the monopoly that had been given last year proved a failure, and the ordinary methods of selling the licenses were reverted to. In Agra the farming system was entirely abandoned in favour of outstills, and it was also found possible to reduce in extent the necessary protective belt of country bordering on Native States. The changes made were all for the good, and the addition of 1,025 square miles to the area under the ordinary distillery system may be regarded as distinctly satisfactory.

Country liquor receipts.—The following table shows the increase in receipts from country liquor under the chief sub-heads, as compared with the previous year:—

					1897-98,	1898-99,	Ілсгеаве,
	1				Rs.	Rs,	Rs.
_ (Still-head duty	•••	***		17,24,342	22,75,633	5,51,291
Distillery system.	License fees for	vend—	1				
Dieth	Retail	141	***	•••	7,31,092	9,47,950	2,16,858
· ~ {	Wholesale		***		6,445	6,784	289
	Farms and outsti	lls	5 +1	,	3,29,728	4,33,322	1,03,594
			Total		27,91,607	36,63,639	8,72,032

The consumption of 1,525,138 gallons, as against 1,154,252 gallons in 1897-98, is the direct result of returning agricultural prosperity, coupled with improved administration. The increased vend has been marked in every district throughout the Provinces with the exception of Muttra.

The rise in license fees was common to every district, with the exception of Aligarh, Mainpuri, and Moradabad.

The increase in still-head duty (32.0 per cent.) was proportionately greater than in vend fees (29.7 per cent.). But the fact that the incidence of license fees per gallon sold varies from Rs. 2-11-4 in Cawnpore city to under 4 annas in the rural areas of Gonda, shows that the excise income is still unduly dependent on such fluctuations.

Distilleries.—The number of distilleries at work throughout the year was reduced to 29, the distillery at Bara Banki having been closed from the beginning of the year. The marked increase in the business done in the six bonded warehouses at present established is a satisfactory indication of the convenience of this means of distribution, but Government must insist that the popularity of the bonded warehouses be not imperilled by such negligence as the Commissioner observed at Pilibhit and Fatehpur. The fact that licensed vendors no longer content themselves with liquor supplied by the nearest distillery, but go further

afield for their supplies, points to the growth of competition in the liquor supply trade, and gives promise of important results in improving the general quality of liquor manufactured. Stills of an improved pattern were in use at Agra, Lucknow and Fyzabad; but much yet remains to be done both in turning out a better quality of spirit and in the adoption of more economical processes of manufacture.

European liquor.—The total collection of duty on Rosa rum at Shahjahanpur amounted to Rs. 4,35,585, as against Rs. 4,39,859 in the previous year. This decrease was the result of the fall in the exports to the Panjab, for which no satisfactory reason has been given. The consumption in these Provinces rose to 36,560 gallons, an increase of 1,469 gallons. The experiment of allowing Rosa rum without any separate fee to be sold by the retail vendors of country spirit in certain large towns is referred to by the Commissioner. The reasons why the experiment gave such poor results seem to have been the unusually low price at which country spirit could be profitably sold, combined with prejudice against the foreign liquor, and some tacit opposition to its sale on the part of the retail vendors. There is evidence that an equalization of prices between the two commodities would lead to a far larger consumption of the spirit manufactured after the foreign method; for the rapid rise in the consumption of Rosa rum in Cawapore to over 10,000 gallons was a direct result of the price of country spirit being forced up by a monopoly. The Government, however, is not prepared to depreciate the selling price of Rosa rum in the bazar by reducing its excise duty to the same level as the duty on country spirits.

Hemp drugs.—The year under review was the third year of the working of the new system by which a fixed duty is levied on ganja and charas. The change has continued to give satisfactory results, as the following figures indicate:—

			189 5- 96,	1896-97.	1897-98.	1898-99.	Porcent- age.
	,		Rs.	Rg,	Rs.	Rs.	+or-
License fees for vend	***	*** .	7,99,842	5.47,075	5,50,727	6,76,849	+ 22 90
Duty on gánja and charas	•••	•••	s'a.a	1,93,287	2,62,197	8,19,091	+21 70
	Total	•••	7,99,842	7,40,362	8,12,924	9,95,940	***

As pointed out by the Commissioner, the import of charas and bhang is now considerably in excess of the recorded figures for previous years. For the continuously low import of gánja two main reasons are shown: the smuggling of the drug into British Bundelkhand from the adjoining Native States, and the serious difficulties experienced of late years by our contractors in obtaining a sufficient supply of baláchar gánja from Bengal. The price of the Bengal drug was also prohibitively high last year, and these causes adequately explain the growing preference for charas over gánja.

The working of the warehouse system was again satisfactory.

Opium.—The stationary character of the receipts from license fees for the vend of opium (Rs. 1,42,567 in the year under review, against Rs. 1,37,472 in the previous year) is ascribed by the Commissioner to the competition of the official vendors and the steady increase of poppy cultivation. The recent abolition of the privileged rates of supply to official vendors should remove the first of these reasons; but the retention of small quantities of opium by poppy cultivators will, and must always, be a thorn in the side of the excise administration.

The amount of excise opium sold rose to 60,650 sers, as compared with 56,642 sers in the previous year; but these figures still remain considerably short of the pre-famine statistics of consumption. The withdrawal of the official vend

in districts where poppy is not grown will probably check the slow recovery again.

Tari.—The income from tari shows an increase of 7 per cent. on the receipts of the previous year. The shop-to-shop settlements in Mainpuri and Basti again worked satisfactorily, and the system is being extended to other districts. The tree tax system remained in force in the Farukhabad district; the receipts, however, fell from Rs. 11,531 to Rs. 10,949, which has led to the consideration of modifications in the present arrangements with a view to the introduction of the system in force in Madras.

Prosecutions.—The number of prosecutions under the Excise Act rose from 1,018 to 1,259; of 1,486 persons brought to trial, 1,284 were convicted. Rupees 11,014 were realized as fines, and Rs. 14,099 were paid away in rewards. Cases of illegal manufacture of spirits were again most numerous in Fatehpur and Allahabad; the part played by village chankidars in bringing the majority of cases to light in the latter district was specially satisfactory.

Under the Opium Act prosecutions fell from 801 to 543, the decrease being mainly attributable to the smaller number of cases instituted against cultivators for failure in their engagements to grow poppy. For several years a vigorous crusade has been maintained against the keepers of madak and chanda smoking dens, with the result that fewer cases of this kind are now brought to light. With the maintenance of vigilance by the police, the indulgence in this noxious form of intoxication should be rendered sufficiently difficult and attended with such risks as to deter all but the most inveterate smokers.

The net revenue from all sources fell at Rs. 1,223 per 10,000 of population, as against Rs. 984 in the previous year; and of the total demands, only Rs. 514 are reported to be irrecoverable. Towards the close of the year prospects were not so favourable; but the settlements were satisfactory, and the ground that has been gained should be maintained. A still further expansion of the revenue should result from the strengthening of the staff of Excise Inspectors available for preventive work.

7.—STAMPS.

Gross receipts.—The gross receipts, excluding those from the sale of water-marked paper, for the year under report and for the four preceding years, were as under:—

					_			ı
		Year.			Non-judicial stamps.	Court-fee stamps.	Copy stamps.	Total.
					Rs.	Rs.	Rs.	Rs.
1895-96 1896-97 1897-98 1898-99 1899-1900	•••	*** *** *** b;*	ena 848 148 148 148	*** *** ***	18,65,509 18,57,816 17,83,600 17,35,338 17,69,863	50,48,338 48,63,869 51,26,988 52,17,200 53,11,805	3,86,161 3,72,814 3,67,015 3,83,022 3,89,183	73,00,008 70,94,498 72,77,603 73,35,560 74,70,851

The figures of 1899-1900 were the highest on record for the Provinces. The total increase, Rs. 1,29,130, or 1.85 per cent., under the first two heads, was contributed to in fairly equal proportions by the receipts from both sources.

The falling off in receipts from non-judicial stamps, which began in 1894-95, has been at last arrested; and the total receipts from this head are now within a few thousand rupees of the income for 1893-94, the last normal year of the prefamine period. The revenue from court-fee stamps exhibits the appreciable increase of Rs. 94,605 since last year, the result being shared by both Provinces; and the figures are, for now the third year in succession, the highest on record.

Non-judicial stamps.—The increase in receipts was common to all heads of non-judicial stamps. The change introduced into the law by the Indian Stamp Act, 1899, under which all cheques must now be stamped, was largely responsible for the increased income from "skeleton forms" and adhesive receipt stamps. A subsidiary cause may be reasonably found in the improved facilities said to have been generally provided for obtaining receipt stamps.

But the general rise of revenue from non-judicial stamps is directly attributed to the revival of commercial activity which marked the year under review. In certain portions of the Provinces, more especially in the western divisions and in Bundelkhand, a partial failure of the harvests and the high prices of grain, which were prevalent all over Northern India, led to the contraction of small loans on the part both of the agricultural and of the poorer non-agricultural classes affected, and so swelled the purchases of document stamps. Sales of these stamps were also assisted in certain districts by other causes, prominent among which was the execution of large numbers of leases, possibly in anticipation of changes in the North-Western Provinces Rent Law. But the rise in the revenue from this head also may, in large measure, be ascribed to the more general cause already indicated. Apart from local scarcity, the harvests in these Provinces were moderately favourable. On the other hand, famine prevailed in Western and Central India and in Rajputana, and the demand for grain at high prices was large. Grain poured into the affected tracts from all parts of the Provinces; and the rush was checked only towards the end of the year by a holding up of stocks in anticipation of a further rise in prices. The export of cotton to Bombay, and, it is believed, of linseed also, was generally very brisk.

These facts explain very largely the increases from all classes of non-judicial stamps. The activity in grain transactions multiplied the use of receipt stamps, created an enhanced demand for hundis, and drove small local speculators to contract loans for the purpose of carrying on their operations, thereby reacting on the sales of document stamps. The increases from "share transfer" and "foreign bill" stamps, which, as usual, occurred chiefly in the commercial centre of Cawnpore, and to a smaller extent in Allahabad, were also due to the activity of trade.

Court-fees.—The increased income from court-fees was fairly general. The net rise in the receipts was wholly derived from stamps of the lower values. The sale of stamps of over Rs. 5 in value was, in the aggregate, considerably less than in 1898-99. The number of cases brought before the civil courts was also smaller; but there was a very striking addition to the number of suits and applications in the revenue courts. The increase of revenue litigation of a petty nature is ascribed to special activity among the landlords of the North-Western Provinces in the institution of ejectment proceedings or suits for arrears of rent. The exceptionally large number of settlements now beginning or recently concluded accounted in part for the increased recourse to the revenue courts, and the year was the last one, under the law of limitation, in which suits could be brought for arrears of the rents of 1896-97.

Copy stamps.—The receipts from copy stamps, rising to Rs. 3,89,183 from Rs. 3,83,022 in 1898-99, show an increase of 1.60 per cent. The revenue from these stamps, in the absence of any exceptional circumstances, necessarily varies with the receipts from court-fees; and the district fluctuations also obey, in the main, the same law. The total number of sheets used amounted to 1,495,904, as against 1,492,725 in the previous year. It is observed that there was a large increase, rearly 10,000, in the number of eight-anna sheets issued.

Water-marked paper.—The sale of water-marked paper brought in Rs. 86,183, as compared with Rs. 81,628 in the previous year. Charges on account of discount and freight, &c., being deducted, the net receipts were Rs. 78,343, as compared with Rs. 74,103. The paper now supplied is reported to be of a more substantial quality.

Charges.—The gross charges of the year, excluding those on account of water-marked paper, rose from Rs. 1,42,892 to Rs. 1,46,491. The larger sales of non-judicial stamps naturally enhanced the payments on account of discount and commission, the increase under these heads being Rs. 3,293. Process fees also were extensively refunded by courts during the year, the total under this head exceeding that of the preceding year by Rs. 7,713. On the other hand, refunds of the value of spoilt non-judicial stamps and stamps no longer required for use decreased by Rs. 4,318, while the corresponding refunds under the Court-fees Act decreased by Rs. 2,628.

Duties and penalties.—Stamp duties realized by Collectors on unstamped paper declined from Rs. 24,316 to Rs. 11,297, the Gonda district being again responsible for by far the greater portion of the amount. The figures of the preceding year were abnormal. Other realizations and penalties levied by Collectors also show a decrease; and the penalties exacted under section 40 of the Act were smaller in individual cases than in the preceding year. The penalties exacted under section 35 by the courts rose from Rs. 7,056 to Rs. 7,838.

Prosecutions.—The total number of persons against whom criminal proceedings were taken under the Stamp Act was 435, as compared with 279 in the previous year. On the other hand, the percentage of acquittals to prosecutions advanced from 9.67 to 15.4 per cent. Rewards for information of offences against the stamp law improved in the direction of liberality.

8.—INCOME TAX.

The following table compares the gross receipts from the tax during the year under report and the three preceding years:—

	and annuities. par		hy com- nies. t II. Interest on		Other sources of income. Part IV.		Fines and	Total collections.		
Year.	Number of assessees.	Amount of tax.	Number of assessees.	Amount of tax.	securi- ties. Part III.	Number of assessees.	Amount of tax,	penalties.	Number of assessees.	Amount of tax.
										·
		Rs.		Rs.	Rs.		Re,	Bs.		Rs.
1896-97	9,497	4,56,831	49	1,08,213	35,578	66,213	18,05,752	1,101	75,759	24,06,975
1897-98	9,425	4,67,711	50	1,11,278	31,422	63,958	17,97,783	1,136	73,433	24,09,280
1898-99	9,780	4,64,977	44	1,07,704	31,976	64,162	17,92,361	1,979	73,936	23,98,997
1899-1900,	9,969	4,65,138	47	1,20,956	95,325	64,506	18,17,710	2,577	74,522	24,41,906

The receipts show an increase of Rs. 42,909 over those of the previous year. The sum of Rs. 13,252 was accounted for by the tax on the profits of companies, nearly half of this, or Rs. 6,549, having been collected in Gorakhpur on the increased profits of the Bengal and North-Western Railway. There were also large increases in Cawnpore, Lucknow, Bareilly and Allahabad, due in the case of Bareilly and Lucknow, to the increased profits of the Rohilkhand and Kumaun Railway and the Upper Indian Cooper Paper Mills, respectively, and, in Cawnpore, to the assessment on two new companies.

The great bulk, however, viz., Rs. 25,349, of the total increase for the year accrued in the collections under Part IV, "Other sources of income." The results of the year, as compared with those of the preceding year are given below:—

		Nur	nber of asse	ssees.	Receipts.			
I	ncomes.	1898-99.	1899-1900.	Variations,	1898-99.	1899-1900.	Variations.	
					· ———			
" VII t	.—Rs.500—Rs.2,000, o XV.—Rs 2,000 and	56,758 7,404	57,032 7,474	+ 274 +70	Rs. 9,16,395 8,75,966	Rs. 9,25,443 8,92,267	Rs. + 9,048 + 16,301	
n pwards.	Total	64,162	64,506	+ 344	17,92,361	18,17,710	+ 25,849	

It is satisfactory to observe that the greater part of the increase, showing a rise of 1.4 per cent. over the corresponding figures for the preceding year, was derived from the richer classes of assessees. The number of assessees in classes I to VI has again increased by a considerable number, viz., 274; but it is noteworthy that in the lowest class (incomes between Rs. 500 and Rs. 750) it was found possible to reduce the number of assessees by 26, concurrently with effecting an increase of Rs. 792 in the assessments. The reduction is inconsiderable in itself, but it is satisfactory as evidencing the sustained progress which is being made in winnowing out the lowest grade of assessees. It is hazardous to attempt any broad generalization as to the reason for this total increase. In one Division a substantial increase in the collections of the tax was attributed to a brisk trade in exporting grain to famine districts in other parts of India; on the other hand, in another Division and certain districts the dullness of the grain trade and the reduction of assessments on grain dealers were ascribed as the reason for considerably reduced receipts. Similarly, certain enhancements were ascribed to more prosperity in the sugar refining trade, while in other districts losses from dealings in sugar were given as the reason for reduced assessments. There was, some reduction of certain abnormally swollen incomes which still remained on the rolls from the 1896-97 famine. But prices were high, and large profits were made out of the exports to the distressed parts of India; that the profits were not more general was due to the holding-up of local stocks in the apprehension of local scarcity.

The gross collections for the year were the highest on record, and it is interesting to compare them with those (Rs. 24,13,803) of 1895-96, the year preceding the famine years. The average incidence of the tax, exclusive of income derived from official salaries and Government securities, was the same (Rs. 44 per 1,000 of population) as it stood in 1895-96. While in the latter year, however, one person in every 648 was assessed, and each assessee paid an average amount of Rs. 28, only one person in every 684 of the population was assessed in the year under report, and the average incidence on each assessee stood, as in the previous two years, at Rs. 30. There has been a considerable reduction in the number of assessees in the five years since 1895-96, while the figures for the two years compared show that the relief given in that period to the poorer classes of assessees has been appreciable. Normal conditions, however, have hardly yet been restored. High prices and the great drain of food stuffs to Western and Central India disturbed the equilibrium of incomes, both from agriculture and trade during the year.

The number of objections preferred against the initial assessments fell from 19,033 in 1898-99 to 18,479; but Collectors interfered without presentation of petitions in 374 cases, against 271 cases in the previous year. The number of persons whose assessment was reduced was 3,080, as against 3,168 in the previous year; 2,112, as against 2,146, succeeded in having their names removed from the assessment list; while in 13,525 cases, as against 13,910, the petitions were rejected. The percentage of objections to the number of assessees thus again fell from 27.4 to 26.6, while the percentage of more or less successful objections also declined, though only slightly, from 26.6 to 26.3. The total number of appeals fell from 2,370 to 2,101, and the assessments were modified in only 485 cases against 591. The percentage of successful appeals thus declined from 24.9 to 23.1, the figure for 1897-98. On the whole, therefore, the results indicate that, in the majority of districts, greater attention was paid to the work of initial assessments and less ground was left for complaint on the part of assessees.

There were 6,378 new assessments, against 6,514 in the previous year, but of these 1,192, or 18.7 per cent. were struck off on objection, appeal or revision, against 18.3 per cent. in 1898-99. The work in Meerut and Aligarh was noticed last year as being good, but in the year of report there was a marked falling off, the percentage of removals having risen from 8 to 26 and from 8 to 17 respectively. Of the districts which were unfavourably noticed last year, the work in Agra and Cawnpore shows a decided improvement, and more care was exercised in

Bareilly and Gorakhpur; but there is no improvement in Moradabad, where the removals were 31 per cent.

The number of persons arrested for failure to pay the tax fell from 60 to 41, while only two persons were imprisoned, compared with four in the previous year. The number of dastaks issued rose from 2,915 to 3,501, and the Board remark that the increase is satisfactory, as indicating that the practice of issuing irregular summonses is becoming less prevalent.

The balances at the close of the year exceeded Rs. 1,000 in two districts only, viz., Allahabad (Rs. 1,723) and Mirzapur (Rs. 2,835). In the former case this is reported to be due partly to the non-disposal of some of the objections, and partly to persons against whom amounts are outstanding having left the district. As to the first reason there is no doubt that work in the Allahabad district was much hampered by the plague and by the difficulties of revenue collection. The position, however, in Mirzapur was unsatisfactory. Sufficient attention was not paid to the work of collection, and the special attention of the present Collector has been called to this matter.

With the exception of the Mirzapur, and possibly the Jaunpur districts, the system of employing unofficial assesses to assist assessing officers in framing income tax assessments was adopted in all the remaining districts of the Provinces. The case of the Mirzapur district has been dealt with separately. In the report of the Jaunpur district it was not said whether the system was adopted or not. In the Jalaun and Partabgarh districts the system was tried, but the results were not reported. From the remaining districts the reports were more or less favourable. The question, however, has now passed the experimental stage, and the Board has been requested to give effect to the orders of Government for the general extension of the system in all districts of the Provinces and its application to the work of assessment. The orders regarding the maintenance of note books in the prescribed form were again neglected or not fully observed in many districts.

The year's record was, on the whole a satisfactory one. In most districts the Act was worked with an increasing measure of success. Due regard was paid to the principles of restricting the lowest class of assessees to persons regarding whose liability and competency to pay there is no substantial doubt, and associating respectable local opinion with the administration in gauging the extent to which the well-to-do traders, bankers, and others, liable to the tax, should contribute.

9.—Currency.

The opening circulation balance amounted to Rs. 1,26,08,330 and the closing balance to Rs. 1,10,75,535, the average circulation having thus been Rs. 1,16,77,140. The year was, however, one of fluctuations ranging from Rs. 90,02,550 on the last day of November to Rs. 1,75,40,215 on the last day of June. The rise in June was due to the accumulation of surplus revenue (even Foreign Circle notes having been changed into high value home notes), while subsequent falls that occurred were owing to withdrawals or absorption of the surpluses. The general level of the note circulation was lower owing to smaller balances and to the fact that the exchanges were such that there was a tendency for Foreign Circle notes to come in rather than for home notes to go out.

The average circulation of the past ten years is shown in the margin. The

Rs. decline in the year under review is mainly attribut
1890-91 ... 95,64,925 able to a decrease in Rs. 10,000 notes due to lower

1892-93 ... 1,30,84,132 balances. Excluding them the circulation was

1894-95 ... 1,44,67,940 Rs. 90,00,475 as against Rs. 92,48,520 in 1898-99.

1,28,20,840

1,48,97,332

1,16,77,141

1896-97

1898-99

1899.00

The table given below shows the extent to which the circulation balance on the last day of each month has been affected by the notes held in the Remittance Treasury:—

		Month.			Circulation.	Notes in Remitations tance Treasury.	Balance.
					Rs. 1,25,24,325	Rs. 7,30,020	Rs. 1,17,94,305

During the year it became necessary owing to Resource Operations to open Currency chests at all the treasuries in these Provinces except Pilibhít and Naini Tál. The opening and closing balances of the year included Rs. 50,87,000 and Rs. 12,00,000 respectively in whole rupees. The closing balance

also comprised Rs. 9,68,000 in Foreign Circle notes. Foreign Circle notes to the value Rs. 16,28,000 were paid from the Treasury balances into Currency chests during the year on account of opposite payments at Allahabad. Of these receipts notes for Rs. 5,86,000 were remitted to the Currency office and Rs. 74,000 were repaid to the Bank of Bengal at Lucknow, leaving a balance on the 31st March 1900 of Rs. 9,68,000.

The following remittances were received at Currency Agencies from Foreign Circles during the year:—

	From ,				At

No cases of fraud in connection with claims on currency notes occurred during the year. Three cases of forgery were, however, detected; one having been reported at Allahabad, another at Indore and the third at Mainpuri Treasury. The two former were old cases, but the latter was a new forgery. The following is a brief abstract of the three cases:—

- (a) Old forgery.—Forged currency note No. $\frac{R}{94}$ 77407 for Rs. 500, purporting to be of the Calcutta Circle, was presented for encashment at the local branch of the Bank of Bengal on the 8th April 1899, by David Reeves alias Ambrose Eleazer, through Sham Sundershah, both residents of Muirabad village, Allahabad. The note was refused by the Bank, and the parties were arrested and committed for trial before the Sessions Judge, Allahabad. They were acquitted by that court, but on appeal to the High Court, at the instance of the Local Government, David Reeves was convicted of using as genuine a forged currency note knowing the same to be forged, and was sentenced to rigorous imprisonment for five years under section 489B of the Indian Penal Code.
- (b) Old forgery.—Forged note No. $\frac{D}{41}$ 50386 for Rs. 1,000, purporting to be of the Allahabad Circle, was paid into the Treasury at Indore with the Post Office collections of the 2nd December 1899, and was forwarded for opinion to the Deputy Commissioner, Paper Currency, Allahabad, by the officer in charge of the Treasury. The note was returned to Indore for further investigation and it is understood, that the matter is being enquired into in the court of the Residency Magistrate, Indore.
- (c) New forgery:—Forged note No. $\frac{R}{53}$ 36756 for Rs. 500, purporting to be of the Calcutta Circle, was presented for encashment at the Mainpuri Treasury in November 1899. The accused Mani Ram was committed to the Sessions and sentenced to five years' rigorous imprisonment on a charge of having used the note as genuine knowing it to be a forgery. On appeal to the High Court of these Provinces the case was referred back to the Sessions Judge of Mainpuri for evidence as to the note being a forgery, and was still pending at the close of the year.

The following figures show the remittances despatched to and received from Foreign Circles by the Currency office during the year under report:—

				ſŧs,
Despatched to Calcut	ta,	***	•••	7,00,755 Uncurrent coin.
Ditto Nagpu	r		***	10,00,000
Ditto Bomb		•••	***	30,00,000
			Total	47,00,755
Received from Ajmer		111	***	23,00,000
Ditto Lahor	e	***	•••	20,00,000
Ditto Rango	on	*** .	•••	25,00,000
			Total	68,00,000

In addition to the above a remittance of sovereigns to the value of Rs. 75,000 was received from Calcutta.

The transactions in sovereigns during the year are shown briefly in the following table:—

The following table shows the cancellation of Home notes during the year under review and the two preceding years:—

	Rs. 5.	Rs. 10.	Rs. 20,	Rs. 50.	Rs. 100.	Rs. 500	Rs. 1,000	Rs.10,000.	Total.
1897-98	13,719	79,887	86,070	23,525	55,832	15,880	10,804	1,359	2,87,076
1898-99	14,210	83,823	85,567	20,220	42,043	6,168	5,174	987	2,08,192
1899-1900	14,006	94,530	85,211	20,057	38,120	5,366	5,087	2,223	2,14,600

The value of the notes cancelled during the year amounted to Rs. 3,65,34,400 showing an increase in value over the figures for the proceding year of Rs. 1,15,70,480. This increase is due almost entirely to the heavy cancellation of notes for Rs. 10,000 each owing to the frequent transfers of notes of this denomination from and to the Remittance Treasury.

The opening balance in the Remittance Treasury was Rs. 7,30,020-8-0 and the closing balance Rs. 28,06,632-6-0. The Foreign notes held by the Remittance Treasury were received in remittance from Mufassil Treasuries. The total value of the notes so received was Rs. 73,84,830; of which Rs. 32,21,675 were cashed at the Currency office and Rs. 29,00,505 were paid to Currency for opposite payments elsewhere, leaving a balance on the 31st March 1900 of Rs. 12,62,650.

The following statement shows the details of half, mismatched and unclaimed notes credited to Government during the year:—

De	scription.		Rs. 5.	Rs. 10.	Rs. 20.	Rs. 50.	Rs. 100.	Rs.	Rs. 1,000.	Rs. 10,000.	Total.	Value.
Half notes Mismatched Unclaimed	Total	***	3 7 	5 12 4 ————	5 2 7	1	1 1			***	14 21 5 40	Rs. 265 195 90 550

The total value of the Foreign Circle notes cashed was Rs. 1,04,76,550, of which Rs. 32,21,675 were cashed by the Remittance Treasury and the balance by the Bank of Bengal on Government account, and to a small extent by bond fide travellers. In addition to the above Foreign Circle notes to the value of Rs. 38,36,505

B5 Remittance from Currency chests ... 5,86,000
3,50,000
3,50,000
29,00,505
38,86,505

Rs. were received in the manner shown in the margin. In all, therefore, Rs. 1,43,13,055 of Foreign Circle notes passed through the Currency office in

the year as against Rs. 1,04,82,350 the year before. The increase was no doubt mainly due to an active trade in grains owing to the famine.

B.—Revenue and Finance other than Imperial.

Provincial and Local Accounts, North-Western Provinces and Oudh, 1899-1900.

The general financial arrangements made for the year under review, which was the second of the temporary two-year contracts referred to in the Resolution quoted in the preamble, differed in no essential respect from those adopted in 1898-99.

The working of the year resulted in a considerable decline under Provincial receipts as compared with the actuals of the preceding year, but these receipts were in close agreement finally with the total budget figure. The Provincial expenditure, on the other hand, while much in excess of that of 1898-99, was in a still greater degree below the amount provided in the budget. The receipts classed under Local compare unfavourably both with the actuals of the previous year and the budget estimate; the expenditure, however, although in excess of the charges of 1898-99, resulted in large savings on the budget provision. The statements appended to this Resolution show in detail how the above results came about.

In the following table, which includes Debt accounts, the general financial transactions of the year are contrasted with whose of 1898-99:—

	_		1898-99,		1899-1900.				
		Provincial.	Provincial, Local.		Provincial.	Local.	Total.

The Provincial receipts were thus 14,73, below, and the charges 10,59, in excess of those of the previous year.

The differences of over half a lakh between the receipts of the two years were as under:—

				Provincial.		Local.	
				7	~	7-

Irrigation, Major	Works	710	***	3,22,	114	***	***
Civil Works	•61	***		***	87,	***	

The fall under Land Revenue and Provincial Rates was due to the larger collections in the previous year of famine arrears and of the current demand, the collection of which in the year under review was seriously affected by the poor kharif harvest. The improvement under Stamps is attributable partly to the revival of commercial activity in the Provinces, especially in grain, the export trade in which to famine-affected areas in other parts of India was a marked feature of the year, but in a greater measure to the stimulous given to revenue litigation of a petty nature by the closing of the period of limitation for suits for arrears of rent of the famine year 1896-97, and possibly by anticipated changes in the tenancy law.

Favourable Excise settlements, a large consumption of liquor in the first half of the year due to agricultural prosperity, and the enhancement of still-head duty from the 1st October 1899 in a number of districts account for the increase under Excise. In the latter half of the year the consumption of exciseable articles was checked by the partial scarcity that occurred and by the high prices of food grains which prevailed, but loss from this cause was in a great measure recouped by the increase previously made in the rate of still-head duty.

The differences shown against Police mark the transfer of the receipts and charges relating to cattle pounds from Provincial to Local, consequent on the transfer of the pounds to the direct management of District Boards, which took effect in the year under review. The improvement under Irrigation Major Works was due to a large demand for water during the year, and the decrease shown against Civil Works chiefly to a special credit in 1898-99 on account of the sale proceeds of the steamer and plant of the Gházipur steam ferry.

The following statement shows the more important differences in the charges of the two years:—

•				Provi	-	Loc	al.

A smaller expenditure in connection with Survey and Settlement work, and savings in salaries of the District staff owing to the absence of a number of officers who had proceeded on furlough after the strain of famine, account for the comparative decrease under the head Land Revenue, Provincial. Similarly, to the absence on similar leave in 1898-99 of a large number of District Judges, and the lower rate of salary drawn by the Puisne Judges in that year, is to be attributed the apparent increase under Courts of Law. The excess Local expenditure shown against Land Revenue occurred in connection with the extension of the Land Record Surveys. The fall under Interest on Ordinary Debt resulted from large recoveries of advances granted to cultivators during the famine of 1896-97 and 1897-98. In the Allahabad Division it was, however, found necessary to write off as irrecoverable a considerable portion of the advances so made, and, as such remissions are treated as a charge against Provincial Revenues, the result was the increase of 1,53, shown against the head Miscellaneous.

The decrease in the Jail expenditure was chiefly due to the low prices of food grains in the earlier part of the year when purchases are made for storage. The saving would have been greater but for a rise in prices during the four last months of the year when the supplies had to be replenished. To the further introduction of reforms in the Police Force and the extension of the Rural Police system in Oudh are to be attributed the increases under Provincial and Local, respectively, that appear against the major head. The opening of a new Training College and the extension of Primary Education, the former a Provincial, the latter a Local charge, and the higher expenditure entailed on the General Revenues and District Boards Funds on account of plague preventive measures, mainly contributed to the increases shown against Education and Medical The excess under Superannuation merely indicates the normal growth of the pension list. The amount shown against

Famine Relief represents the entire expenditure incurred on this account, as no such charges were necessary in 1898-99. The major portion of the money was disbursed by Public Works Officers on test relief works.

The excess under Irrigation (Major Works, Working Expenses, and Minor Works and Navigation) relates mainly to the extension and general improvement of the distributary system, and the entertainment of extra establishment to collect the unusually large amount of water dues. The increase under Interest on Debt in connection with Irrigation Major Works followed on the general expenditure under the latter head, which is met from Imperial Funds on which interest is payable. The prosecution of various important building projects necessitated larger special grants, and to these is to be attributed the excess shown against Provincial Civil Works. The increase under Local in respect of the same head points to the general prosperity of the District Boards' finances, which admitted of their drawing more largely on their balances for such expenditure, although in the case of some Boards special grants had to be given for the purpose from Provincial Revenues.

The actual receipts and charges under Provincial heads compare as under with the original estimates (in thousands of rupees):—

			Budget.	Actuals.
Opening balance	•••	•••	32,00,	32,86,
Receipts	***	***	3,70,35,	3,70,16,
		Total	4,02,35,	4,03,02,
Expenditure	100	***	3,77,90,	3,62,63,
Closing balance	•••	***	24,45,	40,39,

In the original budget the accrual of a deficit of 7,55, was assumed on the transactions of the year. The accounts, however, show a surplus of 7,98, with the result that the actuals are 15,08, better than the original estimate. This is due to savings aggregating 15,27, in the amount provided for expenditure, counter-balanced by a decrease of 19, in the amount provided for receipts. The estimate and actuals of the latter included a sum of 3,98, transferred from Imperial to Provincial Funds, of which 3,83, represents the adjustment allowed under the current Provincial settlement upon Land Revenue collections, and the balance, two contributions of practically equal amount—one in connection with the issue of rum in bond to Bengal and the Central Provinces, and the other to meet half the cost of the construction of an office building for the Conservator of Forests, Central Circle.

The Provincial Revenues were further augmented by contributions for untransferred services amounting to 5,21, from surplus District Boards, in pursuance of arrangements entered into with those bodies on the introduction of the present system of Local Finance. On the other hand, transfers aggregating 21,01, were made from the Provincial account to the credit of Local Funds, viz., 10,00, the statutory contribution to the Patwari Fund; 1,22, to cover a deficit of that amount in the Local Rate Fund, and 1, for the same purpose as regards the Ganges River Toll Fund; 3,56, transferred to the credit of District Boards on account of the surplus of the Ferry Fund, in pursuance of the further decentralization of Local Finance; and 6,22, extra assistance given to certain District Boards whose balances showed danger of becoming unduly deplenished.

The actual Provincial receipts show several important divergences from the corresponding budget figures. Large increases occurred under Irrigation, Major Works (3,93,), Excise (1,98,), Interest on Ordinary Debt (57,), Stamps (42,), and Irrigation Minor Works (20,); while the receipts under Land Revenue and Miscellaneous fell below the estimate by 5,06, and 50, respectively. These variations may be ascribed generally to the same causes, as regards the respective heads,

which have been attributed for the differences already noted between the actuals of 1898-99 and those of the year under review.

The largest saving in the allotment for Provincial expenditure occurred under Civil Works (9,28,), and mainly represented the unutilized portion of the provision of 10 lakhs entered under the head to balance the special contribution of that amount made by the Imperial to the Provincial Government in the accounts of the previous year. Other large savings accrued under the heads—Jails (2,18,) Police (1,57,), Land Revenue (1,35,), Courts of Law (88,), Education (47,), Forest (33,), Interest on Ordinary Debt (26,), Stamps (23,), Assignments and Compensations (22,), General Administration (21,). The Budget estimate, on the other hand, was exceeded under the heads—Miscellaneous (1,57,), Irrigation Major Works (1,04,) and Stationery and Printing (22,).

The charges under several of these heads—Jails, Land Revenue, Interest on Ordinary Debt, Miscellaneous, and Irrigation Major Works—have been shown to have also differed considerably as compared with the actuals of the preceding year, and generally the same reasons may be said to apply in both cases. Part of the savings under Jails was due also to the curtailment of purchases of raw materials for the jail factories, the income from which substantially decreased with a slackened demand for their products, for which plague and the consequent embarrassment of trade were accountable. Of the remaining heads, it will be sufficient to explain that the decrease under Courts of Law was chiefly due to the number of officers on furlough, and that under Police to similar absences and to the fact that the reorganization scheme, for which full provision had been made in the budget could not be completed, although steady progress was made in working up to it.

Under Local the receipts and charges were taken in the original budget at 1,25,95, and 1,26,40, respectively, a deficit of 45, being thus anticipated. While, however, the income suffered from the depression of the Provincial Rates receipts, the Boards worked their funds with caution; and, though able to spend more freely than in the previous year, effected large savings in their allotments, mainly in Public Works and to a smaller extent in their Medical and Educational expenditure; and in the result the year's working converted the budgetted deficit into a surplus of 61, and left the Boards with a total net balance of 14,84, at its close, as compared with 14,23, at credit when the year opened.

Cash balances and resource operations of the Treasuries in the North-Western Provinces and Oudh for the year ending 30th September 1900.

I.—Cash balances.—The following statement shows, in lakhs of rupees, the estimated minimum balances on the 1st of each month for the year under report and the year before:—

On 1st of					1899-1900. Estimated minimum balances.	1900-1901. Proposed minimum balances.

Benares, Campore and Lucknow in March 1900. Instructions were also issued to all the Treasury Officers and the Branches of the Bank of Bengal to receive sovereigns in payment of Government dues and in exchange for notes and small silver, and to issue sovereigns in payment of claims against Government and in exchange for rupees. It is not proposed this year to dwell on this subject in the absence of useful statistics.

The amounts taken over by the Comptroller-General from surplus balances during 1899-1900 were as follows:—

	Daring							In lakhs.	
December January l February June July	L90 0	111 111 111 111	*** *** *** ***	**** *** ***	 	244 244 424		37 52 16 4 100

The year was one of unprecedented difficulty. A statement is given below showing the details of balances in the months of greatest pressure, and side by side are placed the figures for the year 1896-97, a year in which the resource work had assumed unusual proportions. The position in 1899-1900 was even more critical than in the above year. On the 1st October and 1st November the Accountant-General held respectively 9 lakhs and 16 lakhs less of rupees than were held in 1896, whilst the holdings and incomings of useless foreign circle notes was a source of considerable embariassment. On the 1st November there were only 63 lakhs to face the drawals of the month, for land revenue does not commence to come in until about the 15th (and it did not come freely then). The drain upon these Provinces for cash is very considerable. No other part of India has four large towns comparable to Agra, Campore, Lucknow and Allahabad (the monthly demands of these treasuries alone are about 54 lakhs) in which cash payments are largely required by the mass of the people, and the exigencies of trade-apart from the heavy payments to troops at large military cantonments and the large lock up of rupces in numerous hill* or quasi-hill stations. In addition to this there * Two principal and 13 subsidiary treasuries. occurred an extraordinary grain traffic in connection with the Central Provinces famine.

To relieve the stringency in October and November 1896 these Provinces were supplied with 81.77 lakhs of rupees, whereas to meet the demands of the corresponding months of 1899 only 31 lakhs of rupees could be spared. The engagements of Government were however met, but with great difficulty and the dearth of rupees began to be felt in its full force in the succeeding months of pressure (February, March and April). The position was then even more difficult than in November, for the effective balances were very little higher and the liabilities greater. On further representations being made by the Accountant-General, he was furnished with 88 lakhs of rupees in February and March as against 105 supplied in 1897. Other help was given in currency notes, although the quantity of such notes already held by the Accountant-General was as much as he could circulate with propriety. In addition to this it was open to that officer to eash his embarrassing accumulations of foreign circle notes. The process of foreing notes, however, is attended with much the same dangers that beset the restriction of accommodation in times of commercial panic. The natural result followed. Notes went to a discount and more cash was wanted. Those who would ordinarily have accepted notes refused to take them, and those who would have paid revenue in cash paid in notes. In April and May an unprecedented demand was made by the Opium Department for funds. Its drawals in 1897 and 1900 are noted in the

Opium expenditure in lakhs.								
1897 1900	749 617	March. 1·50 9·12	April. 53:6 86:13	May. 31·3 33·4				

On the other hand the famine drawals in 1897 in these months were 81 lakes, but against this may be set the abnormal receipts of revenue in notes instead of cash.

margin. Money was in urgent demand to pay the cultivators and to meet other requirements. The trade of Cawnpore began to complain in the

of April had to be sent here and absorbed before the state of the currency was estored to a normal and healthy condition.

The collections of Government dues during the year were proportionately small in silver coin and large in currency notes—both home and foreign—the inevitable result from the state of things already described. Debts are always paid in that form of currency which is at the greatest discount. The expedient of making transfers of cash and foreign notes through currency chests was also extensively employed to economise treasury balances.

The contraction of the usual supply of silver to these Provinces being coincident last autumn with a very active trade in grain caused the encashment to an unusual extent of home currency notes. In the spring, silver was even scarcer. The public had to get rupees and obtained them by every means it could; Government became, therefore, saddled with its own notes—home and foreign—to an unusual extent. A naturally difficult situation was much aggravated by the necessity that arose of paying notes to unwilling recipients.

The circulation of gold in the districts of these Provinces was attempted for the first time during the year under report and a supply of sovereigns was accordingly issued from Calcutta to the branches of the Bank of Bengal at Agra,

The Treasuries by which supply bills are drawn most are Cawnpore, Dehra Dán, Lucknow and Naini Tal, and these treasuries account for nearly three-fourths of the total amount of bills drawn in the whole province. The falling off in the total drawings as compared with the previous year is mainly due to a portion of funds required by the Banks at Benares and Lucknow being supplied to them by transfers through Currency instead of by supply bills.

Supply bills on other Governments issued during the year amounted to 432 in thousands. They compare with the figures of last year as follows:—

Drawnby-	On India.		On Panjáb.		On I	Bombay.	Total.	
Drawney—	1898-99.	1899-1900	1898-99.	1899-1900.	1898-99.	1899 -1 900.	1898-99.	1899-1900.

* Sent to Akola.

The total balance on the 30th September 1900 shows a net increase of 495 over the balance on the corresponding date of the preceding year. The increase is partly due to large receipts of $\frac{1}{2}$, $\frac{1}{4}$ and $\frac{1}{8}$ rupees returned from circulation into the Government treasuries, and partly to larger receipts of $\frac{1}{2}$ rupees (some of which were supplied to take the place of rupees) and single pice from other provinces, &c., during the year than had been estimated for in the annual estimate.

The total local absorption during the year under review shows a net falling off of 640 as compared with the previous year 1898-99. The decrease in the absorption under small silver is due to the reason stated above viz., the return of small silver from circulation into the Government Treasuries which counteracted the effects of the great demand for small silver during the marriage season in April and May. The increase in the absorption under single pice is due to the unusually heavy demands for copper coin made by the public and the Opium Department during the year.

CHAPTER VI.

VITAL STATISTICS AND MEDICAL SERVICES.

1.—Census of the North-Western Provinces and Oude. [Vide Chapter VI, pages 241 to 252 of Report for 1892-93.]

2.—Births and Deaths.
[See Sanitation Section.]

3.—Emigration.

(a) Inland Emigration.

During the year emigrants under the Act were registered only in the Ghazipur district. The table given below shows the number of emigrants, garden sardars, and local agents:—

	Е	migrants.		ants.	eardárs.	Local agents.	
District .	Male.	Female.	Total.	Dependants.	Gardon #		
Gházipur	14	17	31	***	9	1	

The total number of emigrants registered was 31, against 35 recruited in the last year. Recruitment under the Act, which has largely been replaced by free emigration during the past few years, has now fallen to insignificant dimensions.

In the Ghazipur district the depôt of the local agent was inspected three times by the District Magistrate and once by a Deputy Magistrate. The premises were found neat and clean, and the health of emigrants was generally good. The labourers recruited are reported to be mostly of the Bhar caste, who understood the terms of the contract explained to them in Hindi.

Only two districts, viz. Gházipur and Allahabad, give information regarding the number of "free" emigrants. Ninety free emigrants, including 24 children, went to the labour districts from Gházipur against 247 recruited last year. In Allahabad the number of such emigrants was 61, against 317 in the previous year. The Magistrate of Allahabad attributes the decrease to the fact that from May to December free labourers were recruited largely in the Central Provinces, where the supply of labourers was plentiful. Recruitment outside the Act was no doubt carried on in several other districts, but no record was kept from which the precise number could be ascertained.

The Gorakhpur rules 1894 are reported to have been observed carefully in the Allahabad district, no irregularities in connection with the recruiting operations of the year having been discovered. As a matter of fact, very little information about free emigration is available, as no systematic records about it are generally kept by Magistrates. When the present law has been amended, the working of the system of free emigration will be placed on a more satisfactory footing in general.

The receipts on account of fees for registration of emigrants amounted to Rs. 31, and the expenditure to Rs. 2-6-0.

(b) Emigration beyond India.

The following abstract gives the results of registration for Bengal and Behar and these Provinces during the two years 1898 and 1899 and shows an increase of 4,717 in the number of emigrants recruited in 1899.

The largest number of labourers for the colonies was again recruited in the North-Western Provinces:—

Morte-Meareth Licolnices and Ondr	•••	Total	•••	9,334	14,051
Bengal and Behar North-Western Provinces and Ondh	***	•••	***	1,203 8 131	2,316 11,735

The returns for the various districts of these Provinces show the following number of recruits:—

					•			

During the year under report Cawnpore again supplied the largest number of recruits in these Provinces.

The following statement shows the actual number of natives of these Provinces who were registered during the years 1898 and 1899:—

	estera Pr	ovinces	•••	•••	***	***	1898. 4,367	1899 . 6,600

					Total	•	0 201	77 710
					工 ひりがす		8,331	11.713

Classifying the total number of persons that were registered in 1899 for emigration to the colonies according to place of birth, it appears that 46.97 per cent were natives of the North-Western Provinces and 36.38 per cent. of Oudh, against 46 per cent and 42 per cent respectively in the previous year.

The following table shows the number of natives of each district who were registered as emigrants:—

		•			I	Total	sed	11,713

As in the previous year, natives of the Basti and Gonda districts were most numerous, both these districts as well as Fyzabad showing a considerable increase over the figures of the preceding year.

The number of emigrants from these Provinces who proceeded to the several colonies during the year was 7,925 against 5,523 in the preceding year. The colonies to which the emigrants proceeded are shown in the following statement:—

	Demerara.	Tripidad.	Jamaica	Natal.	Fiji.	Surinam.	Grand Total

Total	3,434	1,574	552	1,010	840	515	7,925

4. DISPENSARIES.

The total number of hospitals and dispensaries open at the close of the year was 374, an increase of 5 upon the total number of the previous year. The total number of persons treated was 3,998,665, or 141,821 more than in 1898. The increase in the preceding year (164,428) was thus fairly maintained. The percentage of the population who sought medical irelief in dispensaries was 8.52 as compared with 8.22 in 1898; and the daily average of indoor patients rose from 2,413 to 2,468. The general attendance at dispensaries increased in 33, while it decreased in 15, districts.

The total number of beds available in hospitals and dispensaries was 4,040, and thus were in excess of the normal demands upon them. The institutions in which the accommodation available was most taxed were those noted below:—

		•	beds,	Daily indoor average.
Colvin Hospital, Allahabad	***		40	48·73
Prince of Wales' Hospital, Benares	144	***	6-1	68:93
Sitarur Sadar Dispensary	P 9 4	•••	40	43.65

The year 1899, though in a less degree than the one before it, was marked by a comparative absence of cholera and small-pox; only 520 cases of the former, and of the latter 289 cases, appear to have been treated in the dispensaries of these Provinces. Aid in attendance or medicines was, however, afforded in 3,025 cholera cases, as compared with 424 in 1898. Cases of malarial fever treated decreased from 691,979 in 1898 to 661,153 in 1899, while those of dysentery increased from 87,526 to 98,103. The number of operations of all kinds performed during the year was 180,190, as compared with 175,708 in 1898.

The total income for the year amounted to Rs. 786,211, and the expenditure to Rs. 7,89,407. Receipts from Government increased by Rs. 4,744, and receipts from local and other funds by Rs. 38,672. Subscriptions from Europeans continued stationary, and subscriptions from natives increased by Rs. 3,337. The main charges for the two years compare as follows:—

					1898.	1899.	Difference.
					\mathbf{Rs}_{\bullet}	Rs.	Rs.

The chief item under investments was the sum of Rs. 90,000 invested on behalf of the Lady Lyall Hospital, Lucknow. The total capital invested on behalf of the dispensaries of these Provinces is now Rs. 15,80,500.

Three thousand two hundred and twenty-two parda-nashin women were visited at their homes by Lady Doctors and female Hospital Assistants.

Agra Medical School.

The following table shows the number of male students in each class compared with the figures for the preceding year:—

- * Including 2 failed students.
- + Including 1 failed student.
- # Including 1 sick.

The decrease both in the total number of civil students, and in the total number on the rolls of the highest class, is said to be due to the small number of civil pupils admitted in the year 1896-97, consequent on increased admissions in the preceding year. Under all other heads there is an increase in the total number of students. In particular, the number of military pupils admitted to the first year class increased from 11 in 1898-99 to 21 in the present year. The total number of malestudents in attendance during the year was 188, as compared with 195 in 1898-99 and 200 in 1897-98. As usual, a sufficient number of applicants have been admitted since the close of the year to bring the total strength up to the sanctioned limit (200). The number of private pupils continued to increase. In the first year class 8 students had passed the Entrance examination of the Allahabad University, as compared with 10 in the preceding year and 7 in 1897-98. The total number of students in the whole school with the Entrance examination qualification was 32, as compared with 29 in 1898-99.

The average number of marks gained at the final examination by civil, Rájputána, and private pupils was higher than in 1898, while the average marks of military pupils slightly decreased. The standard of knowledge of English shown at the first year examination appears to have been satisfactory.

There were 56 female students attending the school in 1899-1900, as compared with 63 in 1898-99, 59 in 1897-98, and 54 in 1896-97. Four pupils who had failed in the previous year succeeded in passing their examinations, and the whole of the first class, viz., nine girls, obtained their diplomas. Seventeen students passed their class examinations out of 30 as compared with 14 out of 27 in the preceding year. These figures relate only to classes I and III. The average marks of those who passed in all classes, with the exception of class III, showed improvement.

The sum of Rs. 1,129 has accrued as interest on the MacDonnell Fund for the training of Lady Doctors, and the purchase of a Government promissory note for Rs. 1,000 has since been approved. It is regretted that there was no suitable candidate forthcoming for a scholarship on 1st July 1899. Various improvements:

to the equipment of the school were made during the year, including the purchase of a bacteriological microscope and various works of reference for the library. It is proposed to build a new Lady Lyall Hospital at Agra, and to utilize the existing buildings as an ophthalmic hospital in connection with the Agra Medical School.

With the exception of a few pupils, the work of the students (male and female) was diligent and satisfactory.

5.—Lock Hospitals.

Blank.

6.—Sanitation.

The report for the preceding year bore witness to the rapid powers of recuperation shown by the people after the famine of 1896-97. The return to normal conditions after a period of distress was aided in 1898 by an unusually healthy season. The general sanitary conditions of the year fell somewhat short of the high standard of the preceding one, but were well above the decennial average. The most striking feature of the year was the high rate of births recorded. In Chapter XII of this Government's Resolution on the Famine Relief Operations of 1897, it was anticipated that the low birth-rate which marked the famine year might extend through 1898; but the increase of the birth rate dates from the middle of 1898, and has been consistently sustained. The rate recorded for the whole year was 48.09 per mille upon the last census population (46,904,791), or 46.55 upon the corrected figures (48,454,289) being the highest on record in these Provinces since those registered (43.77) in the year 1884. This phenomenon would appear to justify a well-known generalization to the effect that one of the consequences of famine is to increase fertility. The birth-rate in the famine districts of Bánda, Allahabad, Cawnpore, Lucknow, Sítapur, Hamírpur, Jhánsi, Jalaun and Hardoi, which show a very large increase in the ratio of births per mille above their mean ratio in the previous five years, appears to support this view. As regards the territorial distribution of the provincial birth-rate, the three western divisions of Meerut, Agra, and Rohilkhand report the highest figures, the only districts in these divisions in which the birth rate was below the provincial average being Dehra Dun and Pilibhit, where the conditions are exceptional; while, on the other hand, the only areas in the divisions of Allahabad, Fyzabad, Gorakhpur or Benares which exceeded the provincial figures were the districts of Jalann, Bahraich, and Basti. Bulandshahr continued to be the district returning the highest rate of births (63.48).

The total number of births recorded during the year was 2,255,627, this being the first occasion on which the number has exceeded two millions. Of the children born, 1,168,209 were boys and 1,087,418 were girls, the proportion being 107.4:100. Births of male children increased by 258,463, and births of female children by 245,439.

It was observed last year that the year 1898 was marked by an almost entire absence of epidemic disease; and that largely in consequence of this the death-rate for the year was, with one exception, the lowest on record. The presence to a modified extent of cholera, dysentery, and diarrhea in the year 1899 contributed to render the mortality higher than that of the preceding year, though the figures were below the preceding quinquennial average (34.56). The death-rate for the whole year was 33.19 per mille, calculated upon the census population, or 32.13 upon the adjusted figures. For 1898 the figures were 27.38 and 26.93 respectively. The total number of deaths recorded rose from 1,284,319 in 1898 to 1,556,821 in 1899, the increase in the total population of the Provinces resulting from excess of births over deaths being 698,806, as compared with an increase of 467,406 in 1898.

There were 817,067 deaths of males and 739,754 deaths of females recorded during the year, the ratios of mortality being respectively 33.62 and 32.73 per mille. As in 1898, the female mortality exceeded the male between the ages of one and five years and again between the ages of fifteen and thirty. There occurred, however, in 1899 a decided increase in infantile mortality: the total number of deaths of children under one year of age (530,355) was higher than for any year since 1881, and the infant mortality rate increased from 224.0 per mille im 1898 to 264.7 in 1899. The rate of deaths among Hindus (33.52 per mille) was rather higher than among Muhammadans (31.55 per mille); in 1898 there was no perceptible difference between the mortality of the two races.

Including town populations, it appears that 28 districts, out of the total number of 48, reported a death-rate in excess of the provincial average. It was observed last year that the mortality rate reported by districts in the year 1898 varied in a definite manner with their geographical situation; but such distribution of the death-rate for 1899 is less clearly marked. The mortality figures for the two Oudh divisions have increased, not only as compared with last year, but also relatively to other parts of the Province. Excluding Oudh, however, there are

* Benares, Fatshpur, and Gházipur.

† Almora, Garhwâl, Muzaffarnagar, Dehra Dûn, Meernt, and Bijnor. only three eastern districts* which record a death-rate above the provincial average; and six† only out of the 20 districts with a death-rate below that average, which belong to the western portion of the Province. Excluding towns, there were 28 districts which recorded a mortality in excess

of the rural average. The highest death-rates during the year were registered in Mainpuri, Etah, Farukhabad, Naini Tal, Bahraich, and Lucknow districts; and the lowest rates in Bánda, Hamírpur, Gorakhpur, Jhánsi, Almora, and Garhwál. In the majority of districts (28), and notably so in the case of the Rohilkhand, Allahabad, Gorakhpur, and Kumaun Divisions, the mortality rate was well below the mean ratio of the preceding five years; and only in the case of districts in the Agra Division was the quinquennial rate generally exceeded.

The number of cases in which the cause of death was verified by professional diagnosis was 9,684 in 1899, as compared with 9,254 in 1898 and 15,116 in 1897. A total of 560,456 entries of births, or 24.9 of the total number recorded, were tested by the local authorities and the vaccination staff during the year: the number of deaths similarly verified being 410,883, or 26.3 per cent. of the total registered number. The number of omissions discovered by the officers of the district staff and members of local boards was, as is usually the case, much, higher than the vaccinators reported. As regards deaths, the percentage of error returned was 2.38 in cases checked by the former, as compared with 41 only reported by the latter agency. Similarly the local authorities found that 2.67 per cent. of births had not been registered, while the vaccinators acknowledged an error of .66 per cent. only. The greater number of cases tested, and of errors found by both agencies in the case of births, was no doubt due to the fact that entries regarding births are attested with much less difficulty than entries of deaths.

The mortality rate in towns was 30.04 per mille, as compared with 33.41 in 1898: for rural tracts the figures were 32.76 and 26.94 respectively per 1,000. In municipalities the death-rate rose from 33.71 in 1898 to 39.54 in 1899. The average birth-rate for the same two years was 36.44 and 47.24 respectively. Eighteen municipalities recorded an excess of deaths over births, as compared with 31 in 1898. The birth-rate was high in several municipalities of the Meerut and Rohilkhand Divisions, being exceptionally high in Kandhla (67.99) and Sahaswan (65.51), and lowest in the hill stations of Mussoorie and Naini Tal, and in Roorkee, from the abnormal figure of 72.70 in Kosi to 14.67 in Mussoorie. The exceptional circumstances of Kosi Municipality have previously been a subject of concern to Government. It is regretted that the improvement in the health of the town-

reported last year should have been of so temporary a character. The Government has at present under consideration, in the Irrigation Department, measures designed to relieve the waterlogged condition of the sub-soil and to reduce the present excessive mortality.

The chief figures in regard to the principal diseases are compared with those of the preceding year in the table below:—

Cn	use of mor	tality		Nu	mber of deat	hs.	Death-rate per mille.

of the disease was from August to November. Thirty districts reported a death-rate of 01 and upwards, the highest mortality occurring in Garhwal (1.61), Fayzabad (1.19), and Dehra Dún (1.16), the two former being the only districts where any considerable area was affected. Towns

where the highest death-rate occurred are marginally noted. Out of a total of 107,239 villages in the Provinces, 1,049 only were visited by cholera. No outbreak of the disease occurred at any of the large fairs.

The absence of small-pox in 1899 was even more marked than in the preceding year, the total number of deaths falling from 2,419 to 2,096 and the death-rate per mille from 05 to 04. No lower rate has been recorded since 1871, when trustworthy registration began. No high mortality occurred in any district. Hardoi and Gonda districts registered a death-rate of 17, and, among towns, Mallawan in the former district had the highest rate (.76). Nineteen districts reported less than 10 deaths from small-pox.

Deaths from fever rose from 1,063,596 in 1898 to 1,245,260 in 1899—an increase of 17 per cent. The mortality per 1,000 rose from 22.67 to 26.55 and, as usual, was

District r	ate.	District 1	ate.
Mainpuri Fatehgarh Naini Tal Muttra Budaun Bulandshahr	40.09 37 75 37 32 35 83 35 40 35 23	Bándu Garwál Hamírpur Gorakhpur Jhúnsi Partábgarh Almora	15 79 16·26 16·32 16·44 17·15 18·27 18 57

slightly higher in urban than in rural areas. In the margin are noted districts reporting the widest variation from the provincial average. The mortality continued to be heavier in the western than in the eastern divisions. Among towns,

Gonda (47.78), Cawnpore (42.11), Aligarh or Koil (41.28), and Gháziabad (41.20) showed high death-rates.

The Government has at present under consideration a scheme for the sale of quinine through landholders and other non-official agency, which is to be applied tentatively at first in four divisions of the provinces, and which, it is hoped, will conduce to the further checking of malarial fever.

The mortality from dysentery increased from 23,574 deaths in 1898 to 27,206 in 1899. The death rate rose from '50 to '58 per mille, as compared with '99 in the

preceding quinquennium, which, however, included the abnormal year 1897. Among districts, Garhwál, Almora, Dehra Dún, and Benares reported the highest death-rate; in Benares, however, the mortality was chiefly in the city, which had a death-rate of 6.02 per mille, as compared with one of .91 for the rural area. Hardwár Union, Káshipur, and Háthras were other towns where a high mortality from dysentery occurred.

The deaths in 1899 from injuries of various kinds are compared below with the figures for the previous year:—

		,	Suic	ides.	Deaths	from —	Total deaths from injuries.		
Year _s		Male.	Female.	Wounds or accidents.	Snake-bite or wild animals.	Total,	Rate.

The districts reporting the largest number of suicides were Azamgarh, Hardoi, Fatehgarh, and Shahjahanpur; all four districts were conspicuous in this respect in 1893 and 1897, and the last three in 1896 as well. Deaths from snake-bite and wild Gorakhpur ... 691 beasts were most frequent in the divisions of Gorakhpur, Azamgarh Basti ... Gonda Benares, and Fyzabad: districts with the highest mortality ... 305 from this cause being as marginally shown. Deaths recorded Mirzapur ... 229 ... 212 ... 212 Bahraich from "all other causes" increased considerably, from 167,48/1 Allahabad ... 206 in 1898 to 250,644 in 1899.

The monthly mortality during the year under review followed, in the main, a normal course. The temporary maximum point attained in May was, however, distinctly higher than usual; and it is difficult to account for this, as climatic conditions were not exceptional, and there was no epidemic disease. The cause may possibly be found, however, in the fact that more rain fell in April and May than usual. The autumn mortality, though higher than that of the preceding year, was well below the decennial average. The fact that the maximum was reached in September, instead of (as usual) in October, may doubtless be attributed to the early cessation of the rains, and the occurrence in September of climatic conditions which ordinarily occur a month later.

The following statement shows the sums expended on sanitation by certain of the larger municipalities in relation to their total income; the figures are for the financial year 1898-99:—

			Total -	Sums expended on-

Samples of water of each municipal water-works have been regularly sent for bacteriological analysis, and have almost invariably been pronounced pure. In September Mr. Hankin was able to detect the presence of the enteric microbe in the Agra cantonment water-supply in time to prevent any ill results.

At Agra the engines of the water-works were put in thorough repair, and the construction of a fourth filter was undertaken (it has since been completed); in Benares some, progress was made with the extension of the sewerage system: in Cawnpore a new sewage scheme was laid before the Board: and in Naini Tal the new water-supply was practically completed. Various other projects were considered by the Provincial Sanitary Board, which met four times during the course of the year.

For the greater part of the year the provinces remained entirely free from plague. The system of circle organization and inspection, which had been successful in dealing with the outbreak in 1897 at and around Hardwar, was applied during the year to certain districts in the Meerut, Gorakhpur, and Benares Divisions, as a safeguard against the introduction of the disease from the Panjab or Bengal. A reduction of the staff was effected during the rains; but inspections were renewed on the approach of the cold weather. The opportunity was also taken to issue a revised edition of the Plague Regulations published by this Government.

Mortality caused by wild animals and venomous snakes.

The totals of the annual provincial mortality caused by wild animals and venomous snakes during the last nine years are given for comparison in the following table:—

				Deaths of	persons.	Loss of	cattle.	Number	Number
	Year.		Due to wild animals.	Due to snakes.	Due to wild animals.	Due to	of wild animals destroyed,	of snakes destroyed.

Only two divisions exhibit any marked fluctuation in the number of persons killed by wild animals. In the Rohilkhand Division only 86 deaths are reported, as compared with 200 in the previous year; but in Allahabad the number has risen from 126 to 186. In all the other divisions the mortality has been somewhat less than in the previous year.

As in former years, more than half of the deaths caused by wild animals are attributed to wolves. It is satisfactory, however, to note that the number has fallen from 426 in 1897 and 379 in 1898 to 271 in the year under review.

In view of the fact that in the year 1898 out of a total reported mortality from wolves in British India of 462, no less than 379 deaths occurred in these Provinces, attention was invited by the Government of India to the desirability of taking special measures to exterminate these posts in the districts which had suffered most. District Officers were accordingly addressed on the subject in November 1899, and the special reports and statistics furnished show that outside the Rohil-khand and Allahabad Divisions, which together account for 226 of the 271 deaths' reported from wolves, there was no necessity for any extraordinary measures.

Forty-eight deaths were caused by tigers, as compared with 51 in the previous year. Of these, no less than 22 occurred in the district of Mirzapur. A special reward of Rs. 200 has been sanctioned for the destruction of a man-eating tiger, to which the majority of the deaths appear to have been due. Thirteen deaths attributed to tigers in the Moradabad district were probably, as the Magistrate suggests, due to leopards.

Only 15 deaths are attributed to leopards, and the number of persons killed by bears has fallen from 8 to 3.

Of the carnivora classed as "other animals," jackals are credited with no less than 111 deaths, as against 82 in the previous year. Nearly half of these are reported from the Fyzabad Division, 52 out of a total of 64 deaths from wild animals being ascribed to jackals. The Commissioner states that some of these cases were adults mauled by jackals in whom hydrophobia supervened. He mentions, however, two cases of children, eight or ten years of age, being attacked and killed by jackals.

It seems nearly certain that a large number of these deaths are really due to wolves; and it may be noticed that, although very few wolves have been killed in the last two years in the division, the number of reported deaths has fallen from 43 and 21 respectively in the years 1897 and 1898 to eight in the year under review. This matter requires the attention of the District Officers.

The total amount disbursed in rewards for killing wild animals fell from Rs. 7,277-12-0 to Rs. 7,183-5-0. A very large proportion of the total amount Rs. 2,223, or nearly 31 per cent., was paid in the Kumaun Division, chiefly for bears and leopards, which, though causing slight loss to human life, apparently commit considerable depredations among cattle.

The number of hymnas killed fell from 404 to 296, of which 231 were accounted for in the Agra Division only. The Magistrate of Agra is of opinion that many of the animals brought to Agra for the purpose of claiming a reward come from the bordering Native States. This possibility existing, exceptional care is necessary in sanctioning the rewards.

The statistics relating to the number of cattle killed by wild animals and snakes cannot be relied on as accurate, many losses being unreported; while, on the other hand, animals which are missing from a herd are frequently reported as killed by wild animals. In the whole of the Agra Division only four animals are reported to have been killed by wild animals or snakes.

The Kumaun Division, which returns heavy losses from loopards and substantial losses from tigers, bears, and wild dogs, accounts for 4,963 out of the provincial aggregate of 6,945. The only other division which reports appreciable loss is Allahabad, in which the destruction of 999 cattle is ascribed to leopards, mainly in the Bundelkhand districts, where the craggy hills afford shelter to a large number of these animals. The total losses of all other districts are returned as being under 200.

The number of licenses issued in Form XI under the Arms Act for the protection of crops and agricultural stock fell during the year from 10,927 to 10,326.

The reduction is distributed over all divisions except Benares, where the increase from 317 to 327 is insignificant and due to special local conditions in the Mirzapur district.

The most noticeable decrease is in the Meerut Division, where the figures fell-from 1,119 to 986.

Under the rules published by Notification No. 684F., dated 19th September 1890, 16 licenses were issued by Forest officers for the destruction of the larger carnivora. The animals destroyed under these licenses were 38 tigers, 15 leopards, and eight bears.

The mortality from snake-bite was considerably in excess of that of the previous year, having risen from 4,908 to 5,579. The increase occurs almost entirely in the Gorakhpur, Benares, Lucknow, and Allahabad Divisions, which showed 260, 139, 129, and 139 more deaths respectively than in 1898.

The Commissioner of Allahabad, who has analyzed the figures for municipal and rural tracts, finds that there is a considerable preponderance of deaths of females in the latter, and draws the inference that many of the cases of snake-bite reported in the latter are really cases of murder and suicide of women. The statistics of snake-bite are, however, not generally regarded as reliable, and it would be unsafe to attach too much importance to these conclusions.

The number of snakes reported to have been destroyed shows a marked decrease. In the Benares Division, where 760 persons perished from snake-bite, only 15 snakes are reported to have been destroyed. As in previous years, small sums were distributed as rewards by some municipalities; but the aggregate amount, Rs. 74-6-6, is insignificant, and more encouragement might well be given by local bodies to the destruction of dangerous snakes.

7.--VACCINATION.

The following table sets forth the principal operations of the year in comparison with those of the previous year:—

						Percentage of inspections -		
		Number of vaccinators employed.	Expenditure.	Total number of persons vaccinated.	Number of successful re-vaccina- tious.	By Dsputy Sanitary Commission- ers or District Superintend- ents of Vaccination.	By Assistant Superintend- ents and others.	
		_ <u> </u>	_ 					
			Ra.					
1898-99	•••	ກ20	1,30,966	1,398,684	41,776	9.25	29.40	
1899-1900	***	934	1,38,932	1,511,436	47,292	Š [,] 91	30'19	

There was a considerable increase both in the total number of persons vaccinated and in the number of successful re-vaccinations, notwithstanding the fact that in several districts experienced vaccinators again had to be deputed to plague work and were replaced by inexperienced men. The increase in the number of successful primary vaccinations was spread over forty districts, being most marked in Gorakhpur, Aligarh, Hardoi, Saharanpur, Azamgarh, and Meerut. Eight districts only showed a decrease: the largest decrease (2,626) being in Basti.

The ratio of deaths from small-pox per 10,000 of the population was 4 in 1899, against 5 in 1898, both years having been years of unusual immunity from the disease. Mortality from small-pox was highest in the Oudh and eastern districts, which are, on the whole, less well protected by vaccination than the districts in the west of the Province. The total number of persons vaccinated during 1899-1900 in the first or western circle (719,739) did not differ greatly from that (783,939) in the second or eastern circle, but there was the usual difference in infantile vaccination, 531,100 children under one year of age having been successfully vaccinated in the 1st Circle and 317,575 in the 2nd Circle. The latter figure, however, shows a considerable advance from that (199,199) in the preceding year.

The number of successful primary operations in municipal towns in 1899-1900 was 116,656, and of successful re-vaccinations 3,071, as compared with 101,828 and 2,545 respectively in the previous year: the proportion successfully vaccinated per 1,000 of the population being 33·10 in 1898-99 and 37·97 in 1899-1900. At the suggestion of the Army Sanitary Commission the Government of India directed

the inclusion in the Vaccination Report of a statement relating to children under one year of age in municipal towns. In this statement the number available for vaccination is calculated by deducting from the number of births during the year the number of children under one year who died; but, as a good many of the latter were doubtless born in the preceding year, the calculation does not appear to be trustworthy. Moreover, many of the children who died were, until they died, available for vaccination. It is supposed that these causes account for the fact that in many towns the number of infants shown as successfully vaccinated exceeds the number shown as available for vaccination.

8.—Lunatic Asylums.

The chief figures in regard to the lunatics confined during the year in the four asylums in these Provinces are shown in the accompanying statement:—

Lunatic Asylum. Discharged. Discharged			. — -		 -		•		_		
Bareilly 278 94 39 6 15 312 301·3 324 362 Benares 306 43 27 8 17 297 306·1 319 310 Agra 284 82 30 13 19 254 251·3 271 276 Lucknow 212 100 38 11 21 276			lst.	alud.	Disch	arged.	1	11st 399.		ber Dy	1

The population of the asylums rose during the year from 1,030 to 1,115. The large number of admissions (319), which showed a great increase on those of previous years, is partly explained by the transfer of harmless criminal lunatics from Central Jails to the Agra and Bareilly Asylums, in pursuance of the decision, mentioned last year, that no criminal lunatics of any kind should any longer be kept in jails. The decrease in the total accommodation available in the asylums is due to the decrease shown against the Bareilly Asylum, which is now said to have accommodation for 254 male and 108 female patients only, as compared with 310 male and 112 female patients last year. The Benares Asylum was the one in which there was most pressure on the space; the number of inmates there closely approached the available accommodation, and at times exceeded it.

Five Europeans and Eurasians were admitted during the year, making a total of 20 of this class confined: 2 were cured and discharged. Buildings for the reception of all European lunatics are under construction at Agra; but, pending the completion of these, they are confined in all the asylums, except Lucknow. Nearly half the total cost (Rs. 3,830) of the maintenance of European lunatics was defrayed by the contributions of friends.

Four escapes of lunatics were reported during the year, 3 being from the Lucknow Asylum and 1 from Agra. In 2 cases the lunatic has not yet been recaptured.

The total mortality in the asylums fell from 87 in 1898 to 72 in 1899, there being a marked decrease in all the asylums, except Agra. The Lucknow Asylum continued to show the highest death-roll (21), the highest number of admissions to hospital (454), and the greatest percentage of mortality (9.3). Sixteen of the

Lucknow patients who died were, however, reported to be in indifferent health upon admission, and the total figures are in any case too small to indicate that the sanitation of this asylum is inferior to that of the others. Of the total number of deaths which occurred, 10 were due to anamia and debility, 10 to phthisis, and 9 each to dysentery, pneumonia, and epilepsy.

The criminal lunatics confined in asylums, are summarized below:-

Lunatic Asylum.				Remaining on 1st Jan- uary 1899.	Admitted and re-admitted.	Discharged or transferred.	Died.	Remaining on 31st De- cember 1899.
Bareilly		•••	•••	30	40	20	1	49

		Total	4 4 5	174	126	46	12	242
Figures for 1	1898	•••	•••	178	35	26	13	174

The increase (68) in the total number of criminal lunatics confined in asylums is due chiefly to the number (49) transferred from Central Jails.

The causes of insanity were recorded as known in about half the number of cases admitted. In 113 cases out of the 156 thus recorded, insanity was attributed Number of cases admitted in which cause of insanity was reported as— to physical and in 43

Lunatic Asylum.			- 	(i) Known		1

Rareilly Benares Agra Lucknow			53 8 25 27	18 1 11 13	71 9 36 40	23 34 46 60	94 43 82 100
T	otal	***	113	43	156	163	819

cases to mental causes. The proportion of cases recorded as known varies considerably in different asylums, as the marginal figures show. In 63 cases, or rather less than 20 per cent. of the

total number admitted, insanity was attributed to the use of intoxicants.

The expenditure on construction and repairs amounted to Rs. 6,886, compared with Rs. 7,498 in the preceding year; the only special works undertaken being the re-construction of the flooring and sleeping platform in a barrack of the Benares Asylum, and the re-roofing of a godown at Bareilly. The necessity of connecting the asylum at Benares with the municipal water-works is again urged by the Superintendent. The work has been temporarily postponed for want of funds, but will shortly be put in hand in connection with the scheme for supplying the Reserve Police Lines. Rupees 69,888 were spent in the maintenance of lunatics, as compared with Rs. 74,486 in 1898, the reduction being mainly effected under the head of diet. The friends of lunatics contributed Rs. 2,182 towards their support, and Rs. 6,017 were realized by asylum industries. The latter figure was much smaller than that (Rs. 9,516) of the previous year, and is mainly explained by the falling off in the receipts of the Dairy Farm at Bareilly. The net cost per head to Government amounted to Rs. 58-15-8, or about Rs. 2 less than in 1898. Out of the sum of Rs. 300 per annum sanctioned by Government for each asylum for the purpose of providing amusements for the lunatics, a sum of Rs. 623 was expended during the year, and the results are reported to have been beneficial; but at Agra comparatively little use was made of this indulgence.

The net profit of the Dairy Farm attached to the Bareilly Asylum was. Rs. 1,097 only, as compared with Rs. 5,283 in 1898. The decrease is partly due to.

the discontinuance of the practice of purchasing milk from outside sources and selling again either this milk or the butter produced from it. Considerable losses also were caused by a serious outbreak of cattle disease which occurred at the end of the year, and was diagnosed as rinderpest by Veterinary-Lieutenant Walker, of the Bacteriological Laboratory, who visited the dairy and inoculated the healthy stock. Forty-two head of stock were also inoculated with tuberculin in August by Dr. Rogers, Officiating Imperial Bacteriologist, with results showing that the stock was free from any taint of tubercular disease.

The project for establishing a central asylum at Agra, to which administrative sanction was recorded last year, remained for a while in abeyance pending the decision of the question whether the site of the asylum would be wanted for a combined railway station. That question has been decided in the negative, and work will now be resumed. The plan of the new asylum has been revised in view of the less repressive mode of treatment of insanes which Western experience has approved.

CHAPTER VII.

INSTRUCTION.

1.—GENERAL SYSTEM OF PUBLIC INSTRUCTION.

(For standard section on above, see page 273 and 274 of Report for the year ending 31st March 1893.)

2.—Education.

The total number of scholars in public and private institutions increased by 47,532 (from 378,084 in 1898-99 to 425,616 in 1899-1900); the number of institutions by 817 (from 13,137 to 13,954). In 1895 the number of scholars was 301,408 and the number of institutions was 11,406. There has therefore been an increase of 41 per cent. in the number of scholars, and of 22 per cent. in the number of institutions, within the last four years. The increase in the number of scholars during the last year mainly consisted in a great increase (41,178) in the number of boys attending primary schools. Although the increase in attendance at primary schools for girls was small, a considerably larger number of girls (15,055, against 12,413 in 1898-99) attended lower primary classes, many of them attending in boys' schools. Taking boys' and girls' schools together, there has been an increase of 62 per cent. in the number of primary schools since 1895, and an increase of 66 per cent. in the attendance at them.

The percentage of children at school during 1899-1900 to the population of school age (according to the census of 1891) was 6.05 against 5.38 in 1898-99 and 5.07 in 1897-98. The percentage is lowest in Oudh, being 4.8 in the Lucknow Division and 5 in the Fyzabad Division (which division, however, shows progress): it is highest in the Meerut Division (8.3). These percentages show sustained progress, but they also show how extremely backward these Provinces are in education.

During the year the expenditure on education increased by Rs. 7,87,191 (from Rs. 37,17,957 to Rs. 45,05,148). This large increase took place under in direct expenditure, and consists mainly of the advance from Rs. 2,88,999 to Rs. 4,94,337 against buildings, and from Rs. 81,420 to Rs. 4,55,491 against miscellaneous: the portion of which met from fees was Rs. 61,139 in 1898-99 and Rs. 3,41,918 in 1899-1900.

Collegiate Education.—The average enrolment and the total expenditure on colleges were 1,439 and Rs. 3,77,786 against 1,345 and Rs. 3,59,686 in the previous year. Of the expenditure, Rs. 1,56,689 were defrayed from public funds (as against Rs. 1,57,298 in the preceding year), the remainder being met from fees and other sources. The cost per student is a little less than in the preceding year, and the contribution from public funds also shows a tendency to diminish.

In the M. A. and D. Sc. examinations of the year the total number of candidates was 34 and of passes 26, against 32 and 18 respectively in the previous year. In the B. A. and B. Sc., examinations there were 226 candidates (seven having been entered for the B. Sc. examination and five having succeeded in passing it). The number of B. A. candidates (219) shows a noticeable falling off from the numbers (273) of the preceding year.

During the year certain changes have been introduced, which will, it is hoped promote collegiate education. It is particularly satisfactory to notice that the arrangements, whereby the disadvantages, alluded to last year, under which Bachelors in Science were placed if they intended taking up Law as a profession have

been removed. The High Court have now consented to accept, as sufficient evidence of a competent knowledge of English, the general examination in English which in future both candidates for the B. A. and those for the B. Sc. degree will be required to pass.

Another change of far-reaching importance is embodied in the rule, which the University has, with the concurrence of the Lieutenant Governor, adopted, that candidates for the Entrance and School Final examinations must be at least 16 years old. The question is to be considered whether, in connection with this measure, the present first year course of work should not be transferred to the High Schools, the standard for matriculation being raised to a point halfway between the present standard and that of the Intermediate examination. If this proposal is accepted, the new matriculation examination will probably be substituted for the present Entrance examination as qualifying for the public service. The result would be the establishment of a higher educational qualification for posts under Government.

There is a noticeable increase in number of affiliations to the Government Sanskrit College at Benares, and notwithstanding the severe losses sustained by the Muhammadan Anglo-Oriental College at Aligarh by the lamented death of Sir Saiyid Ahmad and Mr. Beck, the average enrolment at that college has risen from 116 to 150 during the year under report.

Secondary Education.—Small change has taken place during the year in the attendance at, or cost of, public secondary schools (English and Anglo-Vernacular). The enrolment during the year was 25,163, while in the preceding year the figure was 25,397. The expenditure last year was Rs. 7,50,555, against Rs. 7,55,004 in the previous year. Of the expenditure, Rs. 65,349 was met from Provincial revenues, against Rs. 67,165 in 1898-99: Rs. 1,86,036 from Local funds, against Rs. 1,86,622: Rs. 53,862 from Municipal funds, against Rs. 51,781: Rs. 2,99,487 from fees, against Rs. 2,99,585: and Rs. 1,45,821 from other sources, against Rs. 1,49,851.

The number of public secondary schools for girls was 41 in 1899-1900, against 35 in 1898-99, and the number of pupils 3,214, against 2,986. Twenty-one of these schools, however, with 1,418 pupils, were schools for Europeans: two, with 63 pupils, were secondary Vernacular schools.

The number of passes in the Entrance, School Final, and English Middle examinations were less favourable, on the whole, in the year than in the preceding year; but it is said that the Entrance Examination was unusually difficult. The number of candidates at this examination again slightly decreased (891, instead of 907), while the number appearing at the School Final examination rose from 276 to 301.

The number of secondary Vernacular schools for boys was 297, with 36,918 pupils, in 1899-1900, as compared with 294, with 33,811 pupils, in the previous year; but this increase in the number of schools is said to be nominal, the practising schools attached to the normal schools at Agra, Allahabad, and Moradabad (which were reckoned last year as departments of normal schools) having been brought on the list.

A Committee of officials and educational experts was convened at Allahabad by the Lieutenant-Governor in April 1899 to consider certain defects in the school courses that had been brought to the notice of Government. In compliance with the orders of Government passed on the Committee's recommendations, new curricula were compiled by the Education Department, both for Anglo-Vernacular and Vernacular schools. The courses in arithmetic and geography were shortened, and certain other reductions in the course made, drawing at the same time being made a compulsory study in the lower classes. The number of examinations that the boys undergo has been reduced by the abolition of the Lower Primary and the Anglo-Vernacular Lower Middle examinations.

INSTRUCTION. - 185

Primary Education.—The number of District Boards' primary Vernacular schools for boys was as follows:—

				1898-99.	1899-1900.
Upper Primary	144	***	444	2,071	1,882
Lower Primary	144	184	***	2,153	2,446
		Total	***	4,224	4,328

The number of pupils in these schools in 1898-99 and 1899-1900 respectively was 19,774 and 21,111 in the upper primary stage, and 143,768 and 161,963 in the lower primary stage. Thus the number of boys receiving instruction in both stages shows a satisfactory increase, and the decrease in the number of upper primary schools, which is explained to be due to the closing of some inefficient upper primary sections in the Meerut Division, is not a matter for regret. The rates of fees levied in the various districts still present great diversity: but the number of districts which levy no fee at all for primary education was reduced during the year.

Aided Vernacular primary schools for boys numbered 2,241, against 1,655 in 1898-99. The total number of pupils in these schools was 70,601, of whom 2,507 were in the upper primary stage and 68,094 in the lower primary stage. The enrolment shows a very large increase from the total (49,765) in the preceding year; and this increase promises well for the policy adopted by this Government of advancing elementary education by means of grants in aid to indigenous schools. The great need is for increased inspecting agency to supervise these schools, and, in order to meet this need, the inspecting staff of several District Boards has been strengthened recently. During the year additional Sub-Deputy Inspectors have been provided for the Sultanpur, Ballia, Unao, Sitapur, Rae Bareli, Bara Banki, and Hardoi districts, and further additions will be made as funds become available.

Training Colleges and Normal Schools.—The Anglo-Vernacular Training College for teachers, Lucknow, was reorganized during the year; the staff has been strengthened, and the college is now established in its new and spacious building in Allahabad. The number and value of the stipends have also been increased. The results of these measures will be visible in the current and following years. During the year the number of students rose from 19 to 43, and the result of the examination for certificates was good. The number of normal schools rose from three to four by the opening of the normal school at Moradabad. There is now a normal school for each Inspector's division in the plains and in this respect the educational equipment of the Provinces has been brought abreast of the standard suggested by the Education Commission. The question of establishing a Government normal school for female teachers is under the consideration of Government; but at present a certain number of young women are efficiently trained as teachers, on a subvention by Government, at the Church Missionary Society's School at Sigra, Benares.

Technical Education.—The number of students in law classes at the various colleges rose from 372 to 397. The number of candidates (who, it is reported, often appear at an interval of some years after their course), and of successes at the examination, diminished considerably. The imperfections of the system of instruction in Law which the various colleges endeavour to impart have forcibly impressed themselves on the Lieutenant-Governor's mind during his inspections of the various colleges, and he is now, with the valuable assistance of the Hon'ble Mr. Justice Knox, Vice-Chancellor of the University, elaborating a scheme for strengthening the Law teaching at the Muir Central College, which may, it is hoped, in time lead up to the creation of a well-equipped Central Law College for the Provinces.

At the Agra Medical School there were on the rolls at the close of the year 188 men and 57 women, against 195 and 64 respectively in the previous year. The Lieutenant-Gevernor has now been able to find the money (about Rs. 1,20,000) for adding to the Thomason Hospital a suitable Ophthalmic Hospital; and the

provision of this hospital will also benefit the Lady Lyall (Dufferin) Hospital by enabling it to exchange its outlying wards for others, to be built for it in a more convenient situation.

The total number of students at the Thomason Civil Engineering College, Roorkee, was 982, against 888 in 1898-99: the civil students consisted of 86 English and 800 native students, and the military students of 76 English and 20 native students. The health and the work of the students were alike satisfactory. A salutary change has been introduced, whereby students, instead of being paid for attending the Roorkee College, have now to pay for permission to attend it. The profession of Engineering in India, like the profession of Medicine, has passed beyond the stage when it needed to be fostered by eleemosynary support from Government. Scholarships, however, continue to be given.

Of the Industrial School at Lucknow, it is reported that the class of students for whom the school was specially intended appear to be deserting it. The enrolment rose from 106 to 126, but the number of students belonging to the artizan classes is stated to have fallen from 17 to 10. The Government recognises that the school has not hitherto been successful; but measures are in contemplation, whereby it may be hoped that things will improve.

The number of students on the rolls of the Agricultural School, Cawnpore, was 31 on March 31st, 1899 and 25 on March 31st, 1900. The examination results were found by the Director of Agriculture to be very creditable to the Principal and staff.

Female Education.—The total number of schools for native girls, which had been 298 in 1897-98 and 329 in 1898-99, rose to 351 in 1899-1900. The practice of sending little girls to boys' primary schools has spread very greatly in the Fyzabad Division, where 1,565 female children are so learning; the total for the whole Province was 2,670, against 471 in the previous year. Of Anglo-Vernacular institutions (maintained in nearly all cases by missionary societies) there were 1 college, 18 secondary schools, and 9 primary schools: the total number of scholars was 2,246, and the total expenditure (of which Rs. 19,068 was from public funds) was Rs. 1,00,708. Primary Vernacular schools for girls under public management numbered 152, with 4,100 pupils, against 145, with 3,686 pupils, in 1898-99: and aided primary schools for girls rose from 145, with 5,974 pupils, to 165, with 6,323 pupils.

Special Class Schools.—The total number of aided schools for Europeans and Eurasians was 47 (22 for boys and 25 for girls), as compared with 42 in the previous year. The expenditure from Provincial revenues was Rs. 93,664 in 1898-99 and Rs. 99,772 in 1899-1900. The results of the examinations held under the European Schools' Code were, in comparison with previous years, very satisfactory.

In the Colvin School for sons of Taluqdárs at Lucknow there were 39 pupils (21 being Hindus and 18 Muhammadans). The conduct of the boys is stated to have been good, and the school did fairly well in the public examinations.

The general meeting of the Provincial Text-Book Committee was held, as usual, in November, and 13 meetings were held by the five sub-committees. The total number of works considered was 238. The Text-Book Committee has now been entirely reorganized in accordance with the wishes of the Government of India, and it is hoped that, when the new scheme is sanctioned, a career of greater usefulness is before it.

3.—LITERATURE AND THE PRESS.

(a) Literature.

The number of publications catalogued during the year was 1,762 as compared with 1,320 in the previous year. The increase was most prominent in the works of Poetry, in which class alone there was an increase of 225 works; works on Religion

INSTRUCTION. 187

also largely increased from 287 to 371, while works of a miscellaneous character increased from 226 to 351. There was also a substantial increase in the number of works on Medicine. On the other hand works on History decreased appreciably. It is noteworthy that almost the whole of the increase in the total number of works published and catalogued was in first editions of original works of a general, as opposed to a purely educational, character.

1.—Sanskrit Publications.

The Sanskrit publications of the year under review comprised no original work of importance; they were almost exclusively of the nature of editions or re-editions of old Sanskrit works. The Pandit, a monthly journal edited by the Pandits of the Benares Sanskrit College, continued to publish important old texts, belonging chiefly to the grammatical and philosophical section of Sanskrit Literature. Mr. A. Venis, the Principal of the Benares Sanskrit College, also began to publish in this journal an English translation of a very important systematic treatise on the Vedanta Philosophy, the Siddántalésa by Appaya Dikshit. A second Benares undertaking, with similar aims, the "Benares Sanskrit Series". is now bringing out an important old grammatical treatise. And quite recently a 'new series of the same type, the "Chowkhamba Sanskrit Series", has been established, and made an excellent beginning by publishing the Śloka-Vartika, i.e. the first section of the great work of the famous Kumarila Bhatta, the greatest old authority on the system of the so-called Parva Mimansa. The three series, the work of which has been referred to above, do highly important work in supplying Sanskrit scholars with the materials required for an understanding of the different branches in which Indian thought and learning have been active, especially of the different philosophic systems. Among other editions of Sanskrit texts the Editio Princeps, brought out by Pandit Sudhakar Dvivedin, of the Benares Sanskrit College, of the Trisatika, a work on Arithmetic by Sridharacharya, deserves mention.

2.—HINDI LITERATURE. Poetry, Drama, Fiction.

The list of books during the year was a long one, but hardly any of them had any claim to originality. Reprints, like Viśram Sagar and Ramayana of Tulsi Das, were scarcely publications of the year. Rág Prakása, Bhajan Pushpáwali, and others were worthless imitations of hymns of Tulsi Das and Sur Das. Ekant Vasi Yogi, a translation of Goldsmith's Hermit by Sridhar Pathak, was re-printed during the year. Hindi Drama fared a little better, though the principal publications of the year, including the translation of four Sanskrit plays, to wit, the Uttara Ráma Charita, Málatí Mádhava, Málavikágnimitra, and Mrichchhakatika, into prose and verse, were merely translations. The Duhkhim Bála of Bábu Radhá Krishna Dás was also an old work, as the author states that it was revised by his cousin, the late Bábu Haris Chandra of Benares. It is a small book and attempts to show the mischievous character of old customs, e.g. consulting horoscopes in marriages. Saraswatt by Pandit Durga Prasad had also some pretensions to originality, and described the domestic life of Hindus and exposed the evils of ignorance. Krishna Kumari, translated from the Bengali of Michael Madhu Sudan Datta, was also an old work. Hindi Drama is a plant of recent growth, and it was noticed during the year that an attempt is being made to enrich it by translations from English and other sources. The most important branch, however, of Hindi literature to which a new life has lately been given in these days is Fiction. The most famous novelist of the day is Bábu Devakínandan Khatrí of Benares. In spite of his shortcomings, his work Lulling a Thoughtless Age to Servitude seems to command a very large sale. His attempt to introduce magic in his novels, and his ignorance of science, may make his books attractive to ignorant persons. Virendra Vira, which has passed through two editions, contains a description of a conspiracy to put down a troublesome government,

perfectly foreign to Hindu ideas and unknown to Indian history. Chandrakanta Santati, of which twelve parts each of closely printed hundred pages demy 8vo. appeared during the year, is a wearisome story of intrigues. The only other novel worth mentioning was a translation of Reynolds' Rye House Plot by Chunni Lal, written in a similar style.

3.—Hindi Publications, including Biography, History, Language, Philosophy, and Miscellaneous.

No new books on mathematics or science were published, but astrology counted as many as ten publications. These astrological publications are, however, not original, but translations and compilations from Sanskrit treatises. The most important of them is Nawab Khankhanan ka Jyotisha, a Hindi translation of a small astrological composition in mixed Sanskrit and Persian. The author of the original book was a Musalman nobleman, who flourished during the period of Muhammadan rule. The book is of some interest as showing the extent to which the ideas of educated Muhammadans were influenced by contact with Hindus. In itself it is of slight literary value. Jyotisha Navaratna by Misri Lal Jyotishi, Nakshatramala, Tajak Sangraha, Jyotisha, Bhava Mala, Satya Prashna Dipaka, and Muhurta Prakáša are elementary works on Hindu astrology; Jyotisha Sangraha is a larger compilation on the same subject. Dinamala Nakshatramala, tells how the future character and fortune of a child are determined by the day of his birth. Among the biographies may be mentioned Yatindra Charitra by Ambika Prasad Tiwari, Head Master, Tahsili School, Pukhrayan, district Cawnpore; a short life of the late Swami Bhaskaranand of Benares; Swami Virajanand Saraswati ká Jivana Charit, translated from the Urdu of Pandit Lekhram, a well written memoir; and Kavi Panch-Käli Das, translated from the Marathi of the late Vishnu Krishna Shastri Chiplonkar by Pandit Ganesh Prasad Agnihotri of Nagpur, a critical and interesting essayon the life and writings of the celebrated poet. The miscellaneous literature of the year was very comprehensive as regards the range of subjects. Ráshtra Bháshá, translatedifrom the Marathi by Ganga Prasad Agnihotri, and published by the Nagri Pracharini Sabha, Benares, was an essay which discussed the desirability of having a common lingua franca for all Hindustan. According to this writer, Hindi is well qualified for the purpose. Bháibandon men jhagrá hokar log alag hoté hain. Is ká kyá kárana ?, translated from the Marathi, is a small book dwelling upon the evils of family disputes. Stri Dharma Bodhini, by Bábu Tota Ram, Vakíl, Aligarh, is a small book dwelling on the duties of Hindu women. Dharma Śiksha, published by the Allahabad Literary Institute and printed at the Indian Press, is an excellent religious and moral inst tructor. Tib-i-Akbari is a translation of a medical work on the Yunani system of treatment. The Hindi is not always correct or idiomatic. Misra Deśa ki Chitra Mala, published by the Christian Literature Society of Allahabad, gives an account of Egypt, past and present. The book is illustrated, and written in easy Hindi, but here and there betrays a style peculiar to Missionaries, words and expressions being used which have not the sanction of literary authorities. Jadu Vidya, published by Gauri Shankar, bookseller, Hardwar, treats of oracles, clairvoyance, &c. Karamati Pitárá, a treatise on magic, by Sufi Saádat Ali of Moradabad, is a pretentious work on occult practices. The author also advertises cures by his patent medicines. Kimiya gives recipes for the preparation of precious metals from the baser ones, as also miscellaneous recipés of various sorts. Sánkhya Tattwa Sambodhini, Tiká Sahita, is a treatise on Sankhya philosophy, with a Hindi exposition based on the Bháshya of Gourapáda, a useful publication. Jaina Prathama Pustaka, the first book of the Jain sect, is a very elementary tract. Brindaban Mahatmya is a little book in praise of Brindaban. Sanskrit Sagar contains some collections of stories selected from the Panchatantra and Hitopadeśa. Sahitya Navanit, by Pandit Ambika Dat Vyasa, Sanskrit Lecturer, Patna College, printed at the Chandra Prabhá Press, Benares, is an excellent Hindi reader. Bháshá Chandriká is an elementary grammar. It has been adopted by the Text Book Committee. Kavya INSTRUCTION. 189

Nirnaya, published by the Bharata Jivana Press, Benares, is a work on rhetoric, written on the lines of Sanskrit treatises on the same subject. It will be useful to students of Hindi poetry. Dharma Divakar, printed at the Arya Bhaskar Press, Moradabad, is a controversial tract in refutation of Swami Dayanand's opinions. Inglistan ki Yatra, published by the Christian Literature Society, Allahabad, is an illustrated description of a voyage from Calcutta to London.

4.—Undu Publications, excluding Religion, Arts, and Science.

The Urdu publications consist of novels, histories, biographies, works on romance, elegies, love songs, love stories in prose and poetry, works on medicine, law, religion, various arts, occult sciences, &c. Of these the most important appear to be the novels. Some are mere translations, but the great majority are imitations of English novels. They may be classified as historical novels, novels intended to introduce reforms in society, and others depicting the social conditions of the people. To the first class belong Muragga-i-Spain, giving an account of the rise and fall of the Muhammadan power in Spain, and Anjam, depicting the condition of Indian Hindu princes at the time of the Muhammadan conquest of India. To the second belong Ibrat ká tísrá hissa, Bazm-i-Nur and Ajuba, &c. The third class includes Shabab-i-Lakhnau, Umrao Jan Ada, Fasana-i-Azad, &c. Of the Urdu novels the following are noted for the beauty of their style: Kash-makash, Muraqqa-i-Spain, Flora Florinda, Novel Suraiyá Akhtar-o-Hasína, and Fasána-i-Azád. Bazm-i-Núr, which resembles Rasselas to a certain extent, contains a dissertation on the art of government; Akhtar-o-Hasina contains wholesome remarks on female education; and Ibrat ká tisrá hissa depicts the evils of drinking. Next to novels in point of importance stand works on history and biography. Among these the most noteworthy are the works Tarikh-ul-Islam, Al Faruq, Jang-i-Turkey-o-Yunan san 1897 İswi, Futúh-i-Abdul Hamid Khán, Tárikh-i-Jang-i-Rúm-o-Yunán san 1897 Iswi, Al-Muluk, and Al-Majus. The first work treats of the history of Islam in general. It contains the life of the Arabian prophet in detail and the reigns of the first four Caliphs also at some length. The style and the manner in which the subject is treated are ordinary. Al Fárúq gives the life of the second Caliph. The author enters into the details of the life, and the work displays a good deal of research and investigation. The style, too, is good. The publications Futúh-i-Abdul Hamíd Khán, Jang-i-Turkey-o-Yúnán san 1897 Íswí, Táríkh-i-Jang-i-Rúm-o-Yúnán san 1897 Iswi, all give an account of the late Turko-Grecian War. Jang-i-Turkey-o-Yánán san 1897 Íswí is only a translation of an English work. These books show the sensation caused by the late Turko-Grecian War among the Muhammadans of India. Al-Mulák treats of the events of pre-historic times, and Al-Majás the second contains a history of Egypt, Persia, and Greece. These two works form part of a series of books intended chiefly to give the history of India from the earliest time. Works on history and biography are generally semi-religious. It is worth notice that only the Muhammadans show activity in this department of Urdu literature. Works on romance, elegies, love songs, love stories in prose and poetry are, for the most part, of the old type of Urdu literature. Publications on medicine mostly belong to the Galenic system of medicine prevailing among Muhammadans during the middle ages and up to the present time. Some of them are mere translations of old Arabic or Persian works. Law books are very few and of the commonest sort.

Many of the works on religion are partly secular. Some of them contain songs in praise of God, the Arabian prophet, or saints. Others describe the day of judgment as mentioned in Muhammadan traditions, while others treat of the condition of the soul after death and so forth. Such works are Mulk-i-Adam, Mafham-o-Istifada-i-Taklif, Asar-i-Mahshar, Madinat-us-Salam, and many others. In this department of literature only the Muhammadans and the Arya Samaj community show signs of activity. There are some works which are very useful, but do not come under any particular head Iaid down above. They are Jauhar-i-Sanat, Tabib-i-Hafiza, Shigafa-i-Sanat, English Society ke adab, Farasnama-i-Rangin, &c.

Of these the first three are borrowed from English. Jauhar-i-Sanat treats of the art of making teeth, Shigūfa-i-Sanat deals with sundry arts, such as the preparation of chemical compounds, extraction of certain oils, gilding metals, &c. Tabīb-i-Hūfiza deals with the method of improving the memory based on the psychological principle of association of ideas. These works are valuable acquisitions to Urdu literature. English Society ke ādāb and Farasnāma-i-Rangīn are also useful works, the former treating of English etiquette, and the latter of horses, their different kinds, their diseases and how to cure them, &c. Barī Jantrī san 1900 Iswī is a large almanac. There are certain works that treat of occult sciences, astrology, interpretation of dreams, &c. These are Naqsh-i-Sulaimānī, Tābīr-ur-Royā, Asmān-i-Nujūm, Kāshif-i-khoāb, Asrār-i-Darveshī, &c. The books Ramal-i-Ahl-i-Yūrup and Astral Plane are Urdu translations of English works, the former of The Imperial Fortune Teller, and the latter of The Astral Plane.

5.—Urdu and Hindi Publications, dealing with Religion, Arts, and Science.

The majority of the publications in Hindi and Urdu under this head relate to religion, while 42 are educational, among which stand also 3 scientific publications, viz. a Botanical Primer written by Pandit Jai Narain Misra of the Anglo-Sanskrit College, Benares, and a translation and key of Mr. Murray's Manual of Practical Physics. Besides these, there is one rather meagre pamphlet in Urdu, giving a very imperfect sketch of some points relating to the Hindu theory of music, which is the only publication relating to the fine arts mentioned in the list, while there is but one small book dealing with the art of photography, also in Urdu. Nearly all the religious publications are either republications, translations from, or compilations of, well known Sanskrit, Arabic, and Persian works. Allalike are wanting almost completely in originality, and this applies even to the pamphlets of a controversial nature. A good many of these, especially in-Hindi, seem to have been called forth by the activity of the Arya Samaj, and the consequent reaction manifesting itself in the increased vitality of orthodox Hinduism, though some of them are concerned with Christianity; while the larger proportion of the Urdu publications relate either to sectarian controversies between the various sects of Islam or, in a few cases only to the defence of that faith against the followers of other creeds. A translation into Hindi of the Padma Purána, and the verse translation into pure Bháshá of the Laws of Manu, have considerable literary merit. The latter book presents, in a popular and attractive form, the laws. laid down by the oldest and most authoritative of the Hindu lawgivers. Another work worthy of notice is a new edition of the well known Sanskrit hymn, Siva. Mahimna Stotra, by Pushpadanta Ácharya, with "Bháshá tika" or commentary in Hindi. Among the smaller books on Hinduism the only one which need bespecially mentioned is A Hindu Catechism, by Babu Sirish Chandra Bose, B.A., a member of the Judicial Service of these Provinces. This is an attempt to state in plain language and in a brief form the leading teachings of that religion, both dogmatic and practical; but its chief claim to notice consists in the evidence it affords of a growing tendency to a liberal and broad interpretation of the texts, and to the need which is becoming felt in certain classes of educated Hindu society for greater freedom, both of thought and practice.

There were in all 43 publications in Hindi dealing with religious topics. Ishta Sangraha contains methods of Agnihotra to be performed twice a month (i.e. on the new moon and the full moon) with the appropriate maintras given in the Brahmanas of the Vedas. Shatt-Chakra and Yoga-Kriya are books relating to the Yoga philosophy. The former gives a description of the six chakras together with the presiding deity in each, while the latter teaches concentration of the mind as explained by Siva to Parvati. Sita Rama Nakha-tikha gives a devotional description in verse of the persons of Rama and Sita. Ganapati Prayoga is a collection of many small Sanskrit works. They are mostly hymnis recited in honour of different Hindu deities, but some of them are Upanishads of minor

INSTRUCTION. 191

importance, while a few relate to the daily practices which ought to be performed by strict Hindus. Satya Prakáša is a publication of the Árya Samáj founded by Swámi Dayanand Saraswati. It selects certain mantras from the Vedas, and explains them in Bháshá, written in Urdu character, for the benefit of Urdureading Hindus. Gurupadesa is a book of the Sikh religion. It explains a few of the teachings of Nanak in Hindi. Kála-Prabodh gives Sanskrit methods of calculating time. Jiva-Atma is a Hindi translation of a Gujrati lecture delivered by Brahmachúri Nityá Nand. The lecturer distinguishes between the supreme soul and the individuated soul according to the Vedantic philosophy, and refutes the teachings of several religious orders prevailing in India. Atma Rámmáyana is an allegorical writing in Hindi based on the accounts of the Rámáyana, the great Hindu epic. All the nobler and more virtuous tendencies and attainments stand for the best and noblest characters in the Ramayana, which is taken as a symbolical description of a war waged against the vicious inclinations and the baser passions which are represented by the ignoble, wicked, and powerful demons of the epic. Báis Parisaha is a small religious tract in Hindi. It is a kind of prayer in verse to that exalted saint who stands the twenty-two tests of the perfeetly virtuous mentioned in the sacred scriptures of the Jainis. Japojí Sáheb is the Hindi rendering of a work of Nanak Shah. It maintains that a strict adherence to the instructions contained in it will make a man happy, prosperous, and devoted to God. Prema Patra Radha Swami, Part II, is one of the volumes into which some fortnightly publications of the "Sant Mata" were combined for the benefit of the followers of the Rádhá Swámi sect. The last few pages of the book contain quotations from the teachings of different Hindu and Muhammadan saints, who are supposed by the author to have been practically the followers of his own faith.

Much the larger number of the religious publications in Urdu relate to Muhammadanism. Amongst these by far the most important as well as the most voluminous is an Urdu translation of the wellknown English work by Mr. T. W. Arnold, B.A., called the Preaching of Islam, which endeavours to show that the spread of Islam was accomplished by gentle religious persuasion and not by violence and the sword. The translation is an excellent one, the Urdu style elegant and flowing, so that the work in its vernacular garb forms both interesting and pleasant Its Urdu title is Dawat-i-Islam. There are several publications reading. expounding the tenets and devotional exercises of the Shias, and one expounding the Sufi system; but none of these present any specially noticeable feature. Guldasta-i-Karamat is a translation in Urdu from a Persian work of long standing. It is a life of Shekh Muhí-ud-dín Mahbúb-i-Subhání, Ghaus-us-Sagalain (loved of God and helper of men and genii, a Muhammadan faqir who lived some 1,100 Numerous miracles performed by him on different occasions are years ago. described here in simple prose with a sprinkling of verse. Guldasta-i-Ghuncha-i-Gulshan-i-Jahan is a treatise in Urdu dealing with the truths of Suffism. It shows how a man can attain to that knowledge which leads to the development of the inner senses, how he acquires vaster knowledge of things and wider powers, how he becomes a saint and begins to have a sight of the Divine self, attaining liberation thereby. Sri Vallabha Vilasa, Part II, is a book on morality. The evils of pride, luxury, anger, greed, falsehood, ignorance, backbiting, &c., are narrated in detail. Side by side with these the author points out the advantages of good society, humility, forgiveness, truthfulness, compassion, &c., quoting Sanskrit and Hindi versus in support of his statements. Miat-ul-Masáil answers one hundred questions pertaining to certain practices prevailing among the Muhammadans. The answers are supported by the Quran, Hadis and Fatwas. Targhib-un-Nazir gives some miraculous accounts of Ghaus-ul-Azam, first of the faqirs of the Qádirís, as distinguished from other classes of faqirs, such as Chishtias, Naqshbandias, &c. Subah-ka-Sitára lays down certain truths which every true Muhammadan ought to believe. These truths concern social and religious instructions.

Zewar-i-Islam contains stories of the birth of Muhammad and the incidents connected with it. The book is intended to educate Muhammadan women of the Sunní sect. Khulásat-ul-Ahkám-fi-Din-il-Islám contains a few orders for the observances of the followers of Islam. It is a social as well as a religious compilation. Khulasai-Tarikh-i-Mecca gives in brief some religious myths about Mecca. Tuhfat-uz-Zaujain points out the duties and responsibilities of husband and Najút-ud-Dárain is a compilation from the Qurán and Hadís. aims at explaining the duties and responsibilities of children towards their parents. Tuhfa-i-Yúsufia contains lectures on the accounts of Karbalá, comparing Husain to Joseph. Kashf-ul-Hajat is a translation of Malabud and gives detailed rules for namáz and roza. Hádi-ul-Qalb-is-Salím gives an abstract description of Heaven and its inhabitants. Its aim is to induce men to lead a religious life and to perform good actions in order to attain Heaven. Anwari-Muhammadí describes the faiths and doctrines held by the different sects of the Muhammadans. The Sunní writer exposes the shortcomings of the Súfís and Wahabis. Sunan-ul-Muttabiin denounces certain rites and ceremonies prevailing among the Muhammadans at times of marriage and death. Iksir-i-Azam interprets, in good Urdu, some of the salient points and verses of the Quran. Shiratul-Masáib gives accounts of Imám Husain, his relatives, and followers who fought on the plains of Karbala. It exhorts the Shias to shed tears, which pave for them a way to Heaven. It concludes with a dialogue between Noah and the Angel of Death, pointing out the necessity of leading a virtuous life during the short period of life on earth. Fazl-i-Rahmani, II, gives miraculous accounts of Maulana Fazl-ur-Rahmán. It is intended to create an interest in Muhammadan faques, and exhorts the reader to lead a holy and religious life.

Among religious publications in Urdu not relating to Muhammadanism, there may be noticed one which deals with Buddhism. It is an abridged translation of a work by Dr. Paul Carus on Buddhism under the title of Tariq-i-Gyan; and also the Risala-i-Vedic Magazine, a publication of the Arya Samaj. There are 16 Christian publications, including translations into Urdu of The Books of Chronicles, The Gospel according to Saint Luke, The Book of Proverbs, and The Psalms. The 42 educational publications are either actual text books for use in schools, or keys and other aids to the student "cramming" for his examination. There is an unusually large proportion of text books on Arithmetic and Mental Arithmetic, and several versions of two or more books of Euclid. None of them, however, presents any noticeable feature.

6.—English Publications.

Very few of the English books received during the year have any literary merit. Among the exceptions may be mentioned Some Recent Advances in Science by Dr. A. Richardson. The book contains addresses to Indian audiences; but the author, although a Theosophist, retains too much of the scientific spirit to be appreciated by uneducated persons. Dharma, by Mrs. Besant, is an eloquent panegyric on Hinduism as it is conceived by her, and must have powerfully appealed to Indian graduates. Less attractive, though of real interest as being by an Indian author, is the Gyan Gutka, a brief synopsis, in the form of questions Both this and Mrs. Besant's lectures and answers, of Vedantic doctrine. signify the rejection by modern India of European philosophy in the form in which it has been hitherto presented to our students. Mr. R. Greeven, I.C.S., has published an able and closely reasoned essay on the Templar Movement in Masonry, which is presumably addressed not only to English freemasons, but to those native members of lodges who have received an English education. Pandit Iqbal Kishen Shardha has published an essay on Berkley, written in good English. It is largely expository, though the writer differs to some extent from Berkley's editors. The object of the extracts from the Revd. H. Counter's work, The Maráthá Sardár, appears to be to discourage caste and racial feeling on the subject of intermarriages. Witty Sayings of Birbal and Akbar, issued by the same

INSTRUCTION. 193

publishers at Bareilly, is a translation into indifferent English. *Prabodha Suryodaya* is described by its author, Parmeshri Sahai, as a spiritual drama of *Bhagvat Gitá* and other esoteric kindred subjects.

Three medical books may also be mentioned. The translation into English of Alms for the Plague Disease, by Hakim Mukhlis-ud-Daulah Bahadur (Victoria Press, Lucknow), indicates the position of English as a lingua franca in modern India. The same may be said of Professor Hankin's little book on the Bubonic Plague and of Colonel Hall's treatises on Cataract of the Eye.

7.—Arabic Publications.

Only two books have been received. Sádiyah is a reprint of a work on deductive logic in Arabic by the famous Muhammadan logician, Sád-ud-dín, who lived at Taftazán in Persia seven centuries ago. It is a commentary on a little work named Shamsiah. The object of the author was to criticise Qutbi, another commentary on this work by Qutb-ud-dín, a famous contemporary logician. Vazáif-ul-Muzzakkirín is a work of very recent date by a living author, Abdul Ali, of Islamabad, in India. The book treats of the religious and social duties of Muhammadans. It is divided into thirty parts, and each part is prefaced by a quotation from the Qurán.

8.—Persian Publications.

Rámáyan Masihi was composed in the reign of the Emperor Jahangir by Superior to it in excellence are the translations in Persian of the Rámáyan by Faizí and Khán-e-Khánán and other Muhammadan Sanskritists of repute. Husn-o-Ishq was written by Nímat Khán-i-Klí, an officer of the Emperor Aurangzeb. He died two hundred years ago. Diwan-e-Makhfi was written by Zeb-un-nisa, daughter of the Emperor Aurangzeb, and displays refined thoughts and extremely beautiful similes. Karbalá-i-Muallá, by Saiyid Muzaffar Alí Khán, gives a detailed account of the battle at Karbala. The historical facts are generally accurate. Its versification is sonorous, but it is wanting in pathos. Although the work is not, properly speaking, an epic poem, yet it is on the whole a better composition than all others hitherto published. Miyár-ul-Afkár, by Najm-ul-Ghaní Khán, is a small book on logic, written very briefly. It is imperfect for want of examples for exercise. Ziyá-ul-Ain, by Hakím S. Khurshaid Husain, is a treatise on the phenomena of vision and teaches the art of treating eye diseases. It is in itself a singular production, but cannot be said to vie with the works of European oculists. It will be of very little use to those who have not acquired a practical knowledge of surgery. Tahqiq-i-Rah, by Mir Saiyid Muhammad, is a brief and imperfect account of certain points connected with the soul. The arguments are not to the point, and the book is of very little use. Kulliyát-i-Imdádiyah by Imdad-ul-Lah Shah, is a work containing various treatises. Among them is one called Ziyá-ul-Qulúb, in which there is a very good lecture on prayers. Tuhfatul Akbarí and Malfúzát-i-Makhdúm Sháh Miná contain moral maxims and sophistic teachings, and are of no importance from a literary point of view.

GENERAL.

Indigenous literature in the United Provinces continued to move along what may be described as the old lines and the new.

Thus, Poetry in the Vernaculars finds a place in the official registers with accustomed love song and story or elegy and romance and so forth, conceived and written in the manner of two or three hundred years ago. So also ancient superstitions—the "Occult Sciences" as they prefer to be called—hold their own in a number of small books on Alchemy, Astrology, Magic, and the Divination of Dreams; while in a few cases some little relief appears to have been sought in the novel attempt to borrow, where possible, from the so-called Theosophy of present times. So also to the religions of India are devoted several manuals, which, whether they urge to a life of personal devotion or to one of sectarian controversy,

are essentially unchanged from the Sanskrit originals with which the professed scholar has long been familiar. And, perhaps, the chief interest in all these books thus brought together lies in the witness they bear to the fact that the mind of even the reading public is still moving largely in the old grooves.

But there are other books, which, few in number and comprised within a few definite groups, are deserving of closer attention. Of these books, as a whole, it may be said that they deal mostly with religious and social reforms, or, where any such definite motive is absent, they reflect, to a greator or a lesser degree, the influence exercised by the literary models of the West.

The main theme of the former group of works is the revival of Hinduism, or a return to what the writers believe was the faith and morality of the most ancient times. Orthodoxy, using the term, as generally understood in India, to mean the supremacy of the Brahman in the social and religious system, asserts itself vigorously in pamphlets directed against the propaganda of the Arya Samajis. But there is another "doxy" which, demanding acceptance on the usual ground of its own orthodoxy, is as decidedly anti-Brahmanical. Thus, the masses are to be taught out of the short Catechism of Hindwism, by Babu Sris Chandar Vasu, that in ancient India caste did not depend on birth; that a man is not a Brahman by birth, but by deeds; that persons not born of Hindu parents may be admitted into the Hindu community; and so on. Here is the clear recognition that some sort of compromise is needed in view of the conditions of present life in India; and scarcely less evident is the influence of the newer ideas and newer methods of research by whose aid the author of the catechism attempts the difficult task of systematizing the doctrine and practice of Vedás and Smritis, and Puranas and Tantras. Nor need it cause surprise that a Hindu writer, acquainted with the thought and literature of Europe, should desire to return upon his own past in order to solve a modern problem. For it is the law of all progress that, if new ideas are really to live and grow, the old must continue to live in them. And, if the educated Hindu of to-day, looking back with the eye of faith to ancient India as the first home of truth, may seem to himself to have caught thence a glimpse that can make him less forlorn, he knows at the same time that one with him in spirit are those many European minds to whom India and the Indian view of life are ever a strange fascination. He has been told by a highly cultured woman of England that the special word that God delivered to India, the eldest born of His children to impart to all other nations, was Dharma, Moral Duty (Mrs. Besant in lectures on Dharma, delivered to a Hindu audience at Benares). But religious emotion in itself can neither supply nor preserve the just perspective of an historical development.

Fiction under modern influence is represented by a number of novels, mostly in Urdu. Where the interest does not centre in the plot, many of the stories aim at being pleasantly didactic, commending, for example, the cause of fomale education or of abstinence from strong drink. Conspicuous in the Novel section is the Muraqqa-i-Spain as attempting to depict the past life of a foreign country. It is curious to note that the only English novel that has been awarded the honour of a translation into a vernacular (Hindi) is The Rychouse Plot by Reynolds.

In the department of belles lettres the spirited Hindi translations by Bábu Sita Ram of four of the most famous Sanskrit dramas call for honourable mention.

A fair number of purely historical works, written almost entirely in Urdu, are found among the publications of the year under review. The recent Turko-Greek War is the subject of three original works and of a translation from the English—a striking evidence as to the interest that struggle, crowned as it was by the final success of the Muhammadan Power, has roused among the Musalmans of India. Definite periods of Muhammadan history are also treated of in several books. An excellent translation in Urdu is now offered of T. W. Arnold's learned treatise, The Preaching of Islam. Worthy of notice also are Al-Muluk and Al-Majús, the former dealing with the beginnings of history, the latter confining

Instruction. 195

itself to ancient Egypt, Greece, and Persia. The majority of the genuine peoples of Hindustán have never found any but the smallest interest in general history. The production of the two books just named may be ascribed to the workings of that positive and historical spirit which has always dwelt among the nations of Islâm.

Science, physical and mathematical, can scarcely be said to be represented, apart from the ordinary school books and a few others (in Urdu) dealing with certain applied branches of Science. There are ten Hindi tracts on Astrology, but none on Astronomy. And, if Science (in the narrower sense) be conspicuous by its absence from the official Register of Publications, the same must be said of research in the many fields of Indian antiquities.

As in previous years, there is no lack of school books to meet the wants of candidates preparing for examinations. They were duly appraised by the Provincial Text-Book Committee working under the orders of Government.

Bearing on the language question of Urdu versus Hindi was an essay from the Marathi, done into Hindi (Rashtra Bhasha) and published at Benares. The author dwells on the advantages of a lingua franca for all Hindustan, and arrives at the conclusion that the form of speech best adapted for this purpose is Hindi.

(b.) The Vernacular Press.

There were 80 newspapers on the register at the beginning of the year. The total number on the register during the year was 104, 24 new papers having been started. As however 18 having ceased publication, the number at the close of the year was only 86. The majority of the publications were weekly and monthly, the numbers being 45 and 39, respectively. There were 73 purely Urdu against 20 purely Hindi journals. The twenty-four newspapers which were started or received for the first time during the year, were devoted chiefly to advocating political, religious, educational and social reforms. A few papers dealt with local matters, and published miscellaneous news largely extracted from other newspapers. The pending revision of the rent and revenue laws led to the publication of a monthly paper at Bijnor with the special object of safeguarding the interests of landholders and cultivators. Seven papers were devoted exclusively to furthering the interests of the Arya Samaj, while three papers supported the orthodox Hindu religion. The Shia and Sunni principles were advocated by two and three papers, respectively. Over a dozen papers were specially devoted to promoting social reform among the different sects of the Hindu community, and the increase in the number of such papers can hardly be viewed with dissatisfaction, There were 15 districts in the North-Western Provinces and seven in Oudh in which no vernacular papers were published during the year. The most popular newspaper in the Provinces is the Bharat Jiwan, published at Benares, which has a circulation of 1,500: then follow the Vaishya Hitkári with a circulation of 1,000; the Kayasth Conference Gazette, the Prayág Samáchár and the Rájput with 800 each; the Anís-i-Hind, the Jámi-ul-Ulúm and the Ved Prakásh with 700 each; the Hindustáni, the Maheshwari, and the Rangin Mizaj with 600 each; the Jain, Hitopadeshak with 575; and the Oudh Akhbar with 515. The Gurkha Samachar, the Oudh Review, the Rahbar and eleven other papers claimed a circulation of 500 each.

Moradabad has been deposed from the position which it has long held of supplying the largest number of vernacular papers, the number having fallen from 18 to 16, which is equalled by Meerut.

No prosecutions were instituted during the year, but the editors of three papers had to be warned against publishing obscene articles, and the editor of one paper against inserting some objectionable letters.

A brief summary is given below of the views expressed by the newspapers on the principal subjects dealt with during the year 1899,

I.—Political and Foreign.

The fourteenth session of the National Congress did not attract any considerable amount of comment in the Vernacular Press, and the reports of the Proceedings were noticeably meagre. The Hindustani, by way of indicating the progress the Congress was making in the eyes of the public in England, mentioned that the President had received a telegram from the Manchester Chamber of Commerce inviting the Congress to pass a resolution embodying its opinion on the Currency question. The Surma-i-Rozgar repudiated the accusations of disloyalty against the Congress, maintaining that the principal object which the Congress party had in view was to lay the grievances of the people before Government, and thus afford it an opportunity of redressing them. The opposition of that section of the Muhammadans, known as the Aligarh party, to the Congress movement, was explained by the Shahna-i-Hind as being due to the erroneous idea that the Government was favourable to the movement, and that by winning the Government over to their side the Hindus would be likely to deprive their Muhammadan confrers of all political rights. The Bharat Jiwan considered that the Congressists were pursuing a wrong policy, and that mere political agitation was of no avail, as they should first turn their attention towards the material condition of the people. The Anis-i-Hind blamed the supporters of the Congress for their apathy, and insisted that before natives could claim any political rights from the Government, it behoved them to make themselves fit for those rights. The Oudh Akhbar commented on the large sums spent annually on the Congress, and it suggested that the expenditure already incurred would in itself be sufficient to start three factories with a substantial working capital, or to purchase a large tract of land in South Africa, on which employment could be found for thousands of natives. Judging from the writings in the Press, it may be concluded that the Indian National Congress does not attract the same attention as formerly, and in fact the movement appears to be losing its importance.

The prospects of a war with the [Transvaal were keenly discussed in the early part of the year, and the subsequent operations closely followed. The Press generally shared the view that the Transvaal Government was secretly assisted by some European Power or Powers, and that without support the Boers would never have embarked upon a war with Great Britain. Considerable regret was expressed throughout the Press for the reverses to the British arms in South Africa, and most of the newspapers paid tributes of respect to the valour displayed by the British soldiers, the blame for failures being assigned, as a rule, to the leaders. No doubt was entertained as to the ultimate result of the war; but the Press complained generally of the non-employment of native troops in the operations. There seems little room for doubt that the war has created an unusual amount of patriotic enthusiasm, which in many cases has found genuine sympathy in the Vernacular Press. The frontier policy initiated by His Excellency Lord Curzon as tending to reduce military expenditure, was generally approved of by the Press. The Almora Akhbar was of opinion that mixed garrisons composed of native troops and tribal levies would make the best guardians of the marches; but the Hindustani considered that the tribal levies, armed with rifles and trained by British officers, would prove a source of danger in a crisis, and that the policy was a suicidal one.

The increase of Russian influence in Central Asia formed the subject of considerable comment in the Press, and the proposed construction of a Russian railway through Persia to the Gulf was generally viewed with alarm. It was insisted that Great Britain should protect her own interests in the Persian Gulf and check the spread of Russian influence. The Hindustani observed that Indian trade with Khorasan and Meshed had been declining owing to Russian competition, and it urged that, as the loyalty of the Amir of Afghanistan was doubtful, the British Government should occupy Afghanistan. Several papers discussed the probability of a Russian Agent being located at Kabul, the Colonel remarking that it was the

instruction. 197

extension of the Russian railway to Khusk that had encouraged the Russian Press to make recommendations in this direction with a view to establishing friendly relations between Russia and the Amir. Speculation as to the political situation in the possible event of the death of the Amir of Kabul was rife, and the Government were advised to be prepared for all contingencies. Opinions were divided as to the Amir's loyalty to the British Government in his dealings with Russia, but latterly the tone of the Press has been more friendly towards him.

Discussing the Peace Conference at the Hague, the Press were unanimous in agreeing that the manifesto issued by the Czar of Russia was in itself an admirable movement towards preserving the peace of the world, but a doubt was expressed whether any practical good would result from the conference, which was merely a part of deep Russian designs.

The outrages to which Indian pilgrims journeying to Mecca were repeatedly subjected at the hands of Bedouin Arabs attracted the attention of the Press and called forth strong protests.

II.—GENERAL ADMINISTRATION.

As regards the administration of justice, the Press generally accepted the conclusions of the Commission appointed to enquire into the complaints made against Rája Chhitpál Singh, a statutory Civilian, and it agreed that the Government had acted leniently in the case. The necessity of separating Executive and Judicial functions was forcibly set forth in an article which appeared in the Jami-ul-Ulum, in which it was remarked that such a reform would tend to mitigate the abuse of their powers by officials.

The same papers observed that the trial by jury system in India had practically become a dead letter, and in support of this assertion it referred to two cases tried in Bengal in which the verdict of the jury had been set aside by the High Court on appeal.

Complaints against the Police and the high-handedness and oppression practised by the members of the force were numerous. Several suggestions were made for police reform, the principal suggestion having reference to the desirability of raising the pay of the subordinate grades. The responsibilities of the native leaders in the matter of freely co-operating with the Government in improving the character of the Police were admitted; but it was urged by one paper that owing to official prejudice and opposition on the part of the authorities, the leaders of native society were backward in affording such co-operation.

In criticising the debate on the Indian Budget, the Hindustáni expressed its inability to congratulate the Financial Member on his surplus of $4\frac{1}{2}$ crores, and remarked that had Sir James Westland secured his surplus by effecting economies and without introducing any new taxes during his tenure of office, he would have deserved the thanks of the entire native community, but that it was impossible to receive the statement with satisfaction in view of the fact that they had been forced to pay off outstanding arrears of revenue suspended on account of the late famine. The Tuhfa-i-Hind complained of the system of assessing the income-tax, remarking that it was useless to file objections, as instead of any reduction being made the assessment was frequently enhanced. The Hindustáni, however, remarked with satisfaction that the assessment had been made more carefully in 1898-1899 than in previous years.

A general idea seemed to prevail that the introduction of a gold currency would seriously affect the rupee and cause its depreciation, but few of the newspapers attempted to grapple with the question seriously. It was anticipated that the stability of exchange, following the introduction of a gold standard, would bring about a large influx of British Capital into India and injure the country by destroying whatever industries still remained in the hands of native capitalists, and causing a further drain of wealth from India in the form of profit.

There was a strong consensus of opinion that wholesale exportation of grain was mainly responsible for the recurrence of famine, and several papers dwelt at considerable length on the increasing taste for imported articles of European manufacture as accounting for the growing drain on the wealth of the country, and seriously affecting Indian industries. Several articles appeared in the Press on the subject of the poverty of India, and various suggestions being made for ameliorating the condition of the people—one suggestion being that relief works should take the form of masonry wells, tanks and canals, which would prove of permanent benefit to agriculturists, and another that an agricultural college and farms should be started to instruct the people in the ways of improving the condition of the soil and increasing the outturn.

The increase of plague does not appear to have created any unusual excitement or alarm, and although the Press generally viewed the various measures adopted by Government to check plague as having proved entirely futile, it assumed an air of resignation indicating that the Press and public were not opposed to the existing plague administrative system.

The administration of the Agra and Cawnpore Municipalities elicited some adverse criticism. Approval was however expressed of the arrangement made by the Government for improving the finances of the Agra Municipality, and thereby relieving it of its debts without laying any fresh burden on the people. Commenting on the financial embarrassments of the Cawnpore Municipality, one paper urged that if the management of the Municipal finances were placed in the hands of honest and capable men, the existing sources of Municipal income would be found more than sufficient to defray all necessary expenses. Criticisms with regard to the educational system appeared in most papers. The Al Bashir complained that the new system of education was most injurious to the health of students, and that the introduction of the Lower Primary and Lower Middle Examinations had simply led to a system of cramming. The Anís-i-Hind and Cawnpore Gazette strongly protested against a proposal, emanating from the Director of Public Instruction, to the effect that no student should be eligible to appear at the Entrance Examination until he had attained the age of 16 years. The Hindustan and Mushir-i-Saltanat signified approval of the action of Government in appointing a School Committee under the presidency of the Hon'ble Mr. Roberts, and expressed a hope that among other reforms the Committee would specially condemn the frequent changes of text-books. The scheme for establishing a Hindu College at Benares, and the proposal for raising the Aligarh College to a University, elicited some comment from the Press.

III.-LEGISLATION.

The introduction of the (copyright) Telegraph Press Messages Bill was viewed with alarm by the Press, the opinion being that the measure would serve no useful purpose, and would prove highly injurious to the native Press and public. Press generally condemned whipping as a form of punishment, and several newspapers urged the removal of the Whipping Act from the Statute Book. The Act for imposing countervailing import duties on sugar was unanimously approved of as having been the means of saving the sugar industry. The proceedings in the Local Legislative Council in connection with the passing of the Court of Wards' Bill were watched with interest. Although several objections were made by the British Indian Association, Oudh, to the provisions of the Bill, and in spite of the fact that certain amendments proposed by two of the non-official members were rejected by the official members who formed the majority, credit was given to the Government for having been animated by the best of motives in enacting the law. One paper expressed the opinion that the measure would be injurious to both taluqdars and mahajans, inasmuch as the former would be unable to obtain loans in time of need, and the latter would be deprived of a good field for the investment of their capital.

The draft proposals for the amendment of the tenancy law in the North-Western Provinces were freely discussed, and numerous articles appeared in the Press severely criticising the amendments. General satisfaction was, however, expressed that the landowners throughout the Province had been afforded opportunities by the Local Government of discussing the various measures, and confidence was generally expressed that this would lead to the removal of those clauses dealing with the creation of occupancy rights, the qualifications of occupancy tenants, and the definition of "sir", which were considered by the land-owning classes to be detrimental to their interests.

IV.-MISCELLANEOUS.

Indignation was expressed regarding the increasing number of assaults on female passengers on the railways and the indignities to which they were repeatedly exposed, and numerous suggestions were made with a view to insuring their greater security. Several complaints were also made as to the insufficiency of accommodation for third class passengers.

The new sedition laws attracted but scan t attention in the Press, from which it may be inferred that the liberty of the Press has not been seriously affected. Some papers, however, took the view that the journalist's position had been rendered untenable, and that an editor's responsibilities were critical to the last degree.

Generally speaking, most of the newspapers have been conducted with moderation. It may be mentioned as a sign of the times that on the outbreak of hostilities in the Transvaal, several newspapers appealed to the public for subscriptions to the war fund and offered to receive such subscriptions.

CHAPTER VIII.

ARCHEOLOGY.

Epigraphical Section.

The office of the Archæological Surveyor, North-Western Provinces and Ondh Circle, was held by Mr. Edmund W. Smith, M.R.A.S., throughout the year under report, except for the period from the 11th January to 31st March 1900, when he was on three months' privilege leave (afterwards commuted to leave on medical certificate for nine months). During his absence Munshi Gholam Rasul Beg, Head Draftsman in his office, was appointed to hold current charge of his duties. The services of Babu Puran Chandra Mukerji, who, on the 9th January 1899, was temporarily engaged for the exploration of Kapilavastu and its neighbourhood in the Nepál Tarái, were dispensed with, with effect from the 1st November last.

During the year the remaining proofs of the text and line and coloured drawings of Mr. Smith's report on Moghul Colour Decoration of Agra were corrected and returned to the press, and it is hoped the report will be published shortly.

The manuscript text of the report on Akbar's Tomb at Sikandra, which Mr. Smith commenced last year, is still unfinished.

In November, Mr. Smith, with his staff, left for Agra Fort to proceed with the survey of Jahangiri Mahál which was commenced during the year 1897-98. In January or soon after Mr. Smith's departure on leave, Munshi Gholam Rasul Beg commenced to survey the Khas Mahál, or the private appartments of the ladies of the royal harem of Emperor Shahjahan, and Saman Burj or Jasmine Tower, both in Agra Fort. Thirty-five drawings and four negatives of these three buildings were prepared during the camping season of 1899-1900.

Only one-half portion of the decorated pigeon-holes on the left side of the centre of the east elevation of the painted chamber in the Jahangiri Mahál at Agra Fort has been finished. Besides this, the elaborate decorations on the principal entrance to the shrine of Shekh Salim Chishti at Fatehpur Sikri, on banderoles on either side, and on the oblong panels on its left side have been completely finished. Both these works were commenced on the 1st November under Mr. Smith's direction and continued till 31st March by Munshi Gholam Rasul Beg.

In December, His Excellency the Viceroy visited the ancient buildings at Agra, Sikandra, Fatehpur Sikri, Mathura and Brindaban, and gave full instructions to Mr. Smith, which are now receiving careful attention.

The conservation works carried out during the year under the Public Works Department have been very extensive, especially in the Agra district. As mentioned in last year's report, most of the archæological buildings in Agra were visited in January 1899 by His Honor the Lieutenant-Governor, and the works then initiated have been proceeded with ever since. The total expenditure, principally on structural repairs, amounted to Rs. 92,059. Below is a brief account of the work done.

Agra district.—Special repairs to the main entrance of Akbar's Tomb at Sikandra.

This work, as noticed in last year's report, was commenced at the close of

Amount of estimate ... 1,785
Allotment for the year ... Expenditure during the year ... 890
Expenditure during the year ... 890
Expenditure during the year ... 890
The work was commenced at the close of the injury then noticed far exceeded that estimated for at first, and rendered the submission of a revised restored to its original appearance.

Restoration of a Kiosk and two Dalans at Sikandra Mausoleum.

The kiosk was out of plumb and the dalans approaching the last stage of

Rs. 6,332 Amount of estimate 2.687 Allotment for the year 2.687 Expenditure during the year,

dilapidation. The kiosk was entirely dismantled and rebuilt with such renewals as were necessary to restore stability. In the east dalan the extent of injury revealed during the progress of the work,

was much greater than was anticipated by an external examination. The dalan has been thoroughly repaired. The whole amount of the estimate (Rs. 2,687) was expended on these two works. A revised estimate for Rs. 6,332 has been submitted to enable the repairs of the west dalan being carried out.

Repairs to the archæological buildings at the Fort.

The south pavilion on the first floor of the Jehangri Mahal was in a ruinous

Aggregate amount of esti- 24,754 Aggregate allotment for the 21,951 Aggregate expenditure during 21,947 the year.

condition and has been thoroughly restored, both structurally and in other respects. In the north pavilion of the mahal the work consisted of a thorough renewal of the massive roof besides the replacement of many drip stones, brackets, bases and capital of pillars. The restoration of east side of

the mahal, quadrangle and north-west kiosk was in progress at the close of the year.

Special repairs to the Táj and its subsidiary buildings.

38,296 Aggregate amount of esti-Aggregate allotment for the 36,969 Aggregate expenditure of the 37,204

This work consisted of thoroughly repairing the Tomb of Emperor Shahjahan, which was stripped of much of its exquisite marble inlay work. Several marble pieces in the face work of the Mausoleum and the upper platform were renewed and the lower or the "Chambeli floor" was put in proper repairs.

the Taj Mosque the repairs included the renewing of the decayed voussoir stones, the black and white marble bordering the sandstone panels with their foliage and floral designs and the interior ornamental painting. The weather-worn stone slabs in the garden walks were replaced; the Gowshala and the Saheli Burjs Nos. 1, 2 and 3 were thoroughly repaired both internally and externally. The Saheli Burj No. 4 at the outer entrance gate to the Taj, with $\,$ its long $\,$ range of dalans, was in a ruinous condition. Certain parts had collapsed, making the burj an eyesore to visitors. It has been thoroughly restored to its original state with an entirely new balustrade.

Special repairs to the Panj Mahál and Jodh Bai's palace at Fatchpur-Sikri.

In these two buildings much of the exquisite carved work had been obliterated

Amount of estimate 9,617 Allotment for the year 9.617 Expenditure during the year, 10,035.

through age and weather, and certain portions of it had been seriously injured. Masonry pillars had to be erected to support the dangerous parts of the roof in several places. Both these structures have now All carved work done was in exact imitation of the original design. In the Panj Mahal, a five-storied building, the damage was confined It was therefore by no means an easy task to renew the lower stories without any removal of the superincumbent weight. In Jodh Bai's palace the repairs carried out were more or less of a similar character.

been thoroughly renovated. to the first and second floors.

> Structural repairs to the under-ground dalans of the great Buland Darwaza at Fateh pur-Sikri. Rs.

Amount of estimate 8,316 7,000 Allotment of the year This estimate consisted of three works, (1) repairs Expenditure 6,999 to the under-ground dalans and its surrounding corridors, (2) the Royal Alms House, and (3) the Hakim's Bath. A good deal of stone, masonry and pointing work had to be done to efficiently carry out thorough structural repairs to these buildings. The whole of the works were practically completed at the close of the year.

ARCHÆOLOGY. 203

Muttra district—Providing stone flooring to the passage leading to the Gobind Deo's temple at Bindraban.

Allotment of the year 1,000
Expenditure ... 998
temple was very unsatisfactory and a source of trouble and inconvenience to pilgrims visiting the temple. It has now been improved and stone payed.

Lucknow district.—The Residency buildings were taken over by the Public Works Department, and a special establishment entertained to carry out the repairs. These were of a special character and required careful treatment and supervision.

Bahraich district.—The shrine of Saiyid Salar Mahsud is in good condition with the exception of the verandah. As mentioned in last year's report this shrine was visited by the Archæological Surveyor, and the result of his report was the preparation of an estimate for the restoration of the verandah, which will be carried out as soon as the estimate is sanctioned.

Allahabad district.—The three Mausoleums of Sultan Khusru, his mother and sister in the Khusru Bagh garden at Allahabad were inspected by the Archeological Surveyor, and an estimate amounting to Rs. 6,898 was sanctioned for renovating the work on parts of the stone work and renewing some of the colour decoration. Rupees 2,000 was spent during the year. An estimate for Rs. 1,259 was also sanctioned for paving with stone, the floor of the rooms and passages in the crypt of Khusru's mother's tomb. Some petty repairs were also carried out. Asoka's Pillar and the underground Hindu temple in Akbar's Fort at Allahabad were handed over to the Military Department (who are in charge of the Fort) for conservation as objects of Archeological interest.

Benares district.—The Sarnath stone stupa (Dhamah), a well-known historical building, was cleared of jungle, and at the request of His Excellency the Viceroy, who visited the building in December 1899, an estimate was submitted for constructing a shed in which to keep the Buddhistic sculptures and other remains taken from an underground chamber close to the Dhamah.

Mircapur district.—An expenditure of Rs. 5,871 was incurred on annual repairs to the Chunar Fort, on rebuilding the fallen escarp wall and providing lightning conductors to certain buildings in the Fort, and repairs to the Fort cemetery. The other monuments and buildings scattered throughout the Province, which from their present condition and historical or archeological value are in charge of Government, were all examined and their condition reported on by the Public Works Officers, and steps taken for their conservation. This will form part of the work for the ensuing year.

In addition to the work detailed above, a sum of Rs. 29,756 was spent by Public Bodies, Trusts and the like, on the many interesting archeological buildings in their charge, the chief of which are the Husainabad and Snah Najaf Buildings at Lucknow, the Bahu Begam's tomb at Fyzabad, the Saiyid Salar shrine at Bahraich, and some buildings under charge of municipalities.

CHAPTER IX.

MISCELLANEOUS.

1—Ecclesiastical Jurisdiction.

(For standard section, see page 315 of the Administration Report for 1892-93.)

2—Ecclesiastical. 3.—Stationery.

(For standard sections, see page 199 of the Administration Report for 1874-75.)

4-Wards' Institution.

(See Court of Wards.)

5.—GOVERNMENT PRESS.

As compared with the previous year, the receipts and charges were as follows:—

					1898-99.	1899-1900.
					Rs.	Rs.
Receipts	,,,,	***	***	***	40,746	34,225
Charges	•••	***	1+4	444	5,20,310	5,40,634
	Net c	ost to Gover	nment	,,,	4,79,564	5,06,409

The decline in receipts is due to the inclusion in the last year's figures of the abnormal item of Rs. 6,588, received from the Secretary of State for copies of the Famine Report.

The expenditure of the Press, apart from the outlay on raw materials received from the Central Stores, is being steadily reduced every year.

1896.97 ... 3,05,691 The main economies exercised in the year under review were 1897.98 ... 2,95,646 in the charges for establishment (Rs. 3,265), overtime allow-1899.1900 ... 2,92,685 ances (Rs. 1,429), railway freight (Rs. 1,099), and payments to private presses (Rs. 3,142). These reductions were all the result of work being got through more evenly than in the previous year. The only important increases in cost were for raw materials (Rs. 3,809) and purchase of plant (Rs. 1,908). It was found possible to increase the Press equipment by some valuable new machinery.

The estimated value, at the assumed market rates, of the work turned out during the year was Rs. 7,59,961—a marked increase on the figure for any previous year. The rise since 1898-99 was just over 1½ lakhs, the largest amount of extra work having been done for the Police Department (Rs. 66,129), the Secretariat (Rs. 19,854), Revenue and Settlement Officers (Rs. 25,177), and the Public Works Department Examiner (Rs. 10,260). The forms of police diaries used previously to be printed at local presses, and this has been stopped; the printing of papers in connection with legislative work was heavy; and the extension of the Settlement programme largely enhanced the outturn of assessment forms, &c.

The value of the work done at the Press is estimated to have exceeded the cost of working by Rs. 1,58,754; the nominal profit to Government was 26.4 per cent.

The expenditure on the Branch Press at the Naini Central Prison, and the value of the outturn, compare as follows with the previous year's figures:—

				1898-99.	1899-1900.
				$\mathbf{R}_{\mathbf{s}}.$	${f R}s.$
Cost of convict labour	***		***	20,052	19,412
Other expenditure	•••	***		18,888	19,785
		Total	•••	88,940	39,197
Value of outturn	***		***	44,565	53,266

The work generally was economically done, and a great deal of work which formerly had to be given out on contract was efficiently executed at the Jail.

The type foundry turned out a large tale of work during the year, and purchases of type from outside were very materially reduced. A new fount of pica roman manufactured at the Press was particularly creditable.

The year's work was the heaviest on record, but it was carried through with despatch and efficiency. The administration of the Press is being steadily improved and careful economy is practised.

The receipts at the Book Depôt were Rs. 15,779, and its cost was Rs. 4,490. The corresponding figures for the previous year were Rs. 15,286 and Rs. 4,140.

I.—STATISTICS OF PHYSICAL, POLITICAL, AND FISCAL GEOGRAPHY.

B.—Political Relations. 1.—Native States.

78.7

2.—Statement of Native Chiefs in the North-Western Provinces and Oudh.

			 	
of Native Chiefs in the North-Western Frounces and Ouan,	Remarks.	No male The Rampur jagir has an area of about 945 square miles, and a population of 651,949. The post of Minister was held by Muhammad Ishak Khan. The moone of the State for 1898-99 was fig. 30/51/87, and the expenditure 18, 190,556. The capital, liampur, has 76,733 inhabitants, but there no other large towns. Bice, sugar, index, and a kind of damask are the principal exports, and the imports consist mainly of elephants, English cloth, groceries, and salt. A military force of 2,577 men of all arms (including the Imperial Service Troops) was maintained during the year.	The Rdia of Benares is a descendant of Rdja Balwant Singh, Inther of Rdja Chet Singh, who was deposed by Waren Hastings in 1781. The Funily Domains of the Mahifrah of Benares consist of the purganas of Kaswar Rdja in the Benares district, and Kera Mangraur and Bhadohi in the Mizzapur district. Their united area is 1985 square niles, containing 2,117 villages, with a population of 452,829 and an average rental of 18, 10,34,284, of which Re. 3,12,672-3-4 are paid by the Mahafaja and his principal as revenue. The Civil and Revenue Courts are those of the Mahafaja and his principal and deputy principal officers. The procedure is that of Act XIV of 1881, supplemented, where necessary, by the Civil Procedure Gold. In 1861 the Governor-General granted the Edga the right of adoption in accordance with Hunda law and evitom of his race. The Family Domains have been especially exempted from the operation of Act III of 1878 (the Local Rates Act). The Mahárája succeeded his uncle, Sir Ishri Parshad Narayan Singh, Bahádur, G.G.S.I., on the 13th June 1889.	Succeeded on the 6th February 1887 on the death of his father. The area of Tehri is 4,180 square miles, the population is 241,242, and the income from all sources was Its. 2,60,568 and the expenditure 18. 4,27,170. The ligha of Tehri pay no tribute, but are required to give free passage to British subjects passing through their territones, and in case of emergency give assistance to the Paramount Power. The principal article of produce is grain. No mines are worked.

^{*} The decrease in the number of villages is not real. The previous year's figures were incorrectly reported.
† The Deputy Commissioner reports that last year's figures were wrong.
† The increase is due to the inclusion of the Municipal and Town Police.
§ In Cawnpore the increase is due to the reorganization of the Civil and Armed Police and in Nami Tal to the reorganization of the Civil Police and to the increase in the number of chaukidárs.

¶ The increase is due to the conversion of jágír paid into cash-paid chaukidárs.
¶ A large number of rural police formerly paid direct by the Balrámpur Estate, has now been brought on the cash list, hence the increase.

⁽a) Figures under the following heads are included in the "Total cost of Administration":-

^{3.} Land Revenue. District Administration (Provincial and Local).

18. General Administration (Provincial and Local).

18. General Administration (Provincial and Local).

18. Stamps (Imperial and Provincial).

19. Excise (Imperial and Provincial).

10. Assessed Taxes (Imperial and Provincial).

10. Assessed Taxes (Imperial and Provincial).

10. Law and Justice—Courts of Law (Provincial), minus corresponding receipt heads.

198. Law and Justice—Jails (Provincial), ditto.

190. Police (Provincial and Local), ditto.

20. Police (Provincial and Local), ditto.

21. Education (Provincial and Local), ditto.

22. Education (Provincial and Local), ditto.

23. Stationery and Printing (Provincial and Local), less the figures under XXIII, "Stationery and Printing" (Provincial).

45. Civil Works (Provincial and Local), less the figures under XXXII, "Civil Works" (Provincial and Local).

A.—LEGISLATIVE.

1.—Statement of Bills proposed or pending in the Legislature of the North-Western Provinces and Oudh in 1899-1900.

Title of Bill.	By whom proposed.	Object and character of Bill.	In what stage.
1	2	8	4
1. The Oudh Settled Estates Bill.	Government	To make better provision for the preservation of certain estates and other immoveable property in Oudh.	Under consideration of a Select Committee (passed after the close of the year).
2. The North-Western Provinces and Oudh Land Revenue Bill.	Ditto	To consolidate and amend the law relating to land revenue and the jurisdiction of revenue officers in the North-Western Provinces and Oudh.	Under considera- tion of a Select Committee.
3. The Oudh Rent Act, 1886, Amendment Bill.	Ditto	To amend the Oudh Rent Act, 1886, and the Oudh Laws Act, 1876.	Ditto ditto,

2.—Statement of Acts passed by the Legislative Council of the North-Western Provinces and Oudh in 1899-1900, and sanctioned as required by Law.

Title of Act.	By whom proposed.	Object and character of Act.	Date on which sanctioned,
1	2	3	4
1. The North-Western Provinces and Oudh Court of Wards Act, 1899. 2. The North-Western Provinces and Oudh Municipalities Act, 1900.	Government Ditto	To consolidate and amend the law relating to the Court of Wards in the North-Western Provinces and Oudh. To make better provision for the Organization and Administration of Municipalities in the North-Western Provinces and Oudh.	Passed on 92nd November 1899. Received the assent of the Governor-Gen- eral on the 3rd January 1900 and 18 now Act No. III of 1899. Passed on 20th December 1899. Recoived the assent of the Governor-Gen- eral on the 20th February 1900 and is now Act No. I of 1900.

B.—Judicial Statement No. 1 (Civil, Revenue, and Criminal).

Statement showing the number of Judicial Divisions and the number of Officers exercising Appellate or Original Invisdiction in the North-Western Provinces and Oudh on the last day of the year 1899, with the cost of Tribunals.

Norb 1.—The total of columns 4 to 8 does not agree with column 3 as the former includes 2.72 non-labouring prisoners shown in column 2 who elected to labour.

Norb 2.—Column 713. excludes 3,948 convict night watchmen who, according to their day duties, were shown in other columns.

Norb 3.—Trisoners shown in column 6 were not employed for reasons given below.—

Prisoners on penal dict, new admissions under observation, condemned prisoners who were handcuffed and under anthropometrical measurement, prisoners sent to court and those under sentence of transportation.
